CAD Software Systems

Target 3001!

Board layout software for Windows

TARGET 3001! represents a new generation of CAD/CAE software for circuit design. TARGET 3001! has been created to meet the requirements of professional design engineers. TARGET 3001! incorporates the functions of schematic capture, simulation, PCB layout, autoplacer, autorouter and EMC analysis all through one Windows user interface. In addition the integration of the entire project data in one common database accelerates the development process enormously. Easy generation of all required manufacturing data minimises your projects time-to-market.

TARGET 3001! includes:

- * Schematic
- * Mixed Mode Simulation
- * Shape Based Contour Autorouter

- * PCB Layout
- * AutoPlacer
- * EMC Analysis
- * Frontpanel engraving tool

- Circuit diagram and board software especially for developers
- Circuit diagram, mixed-mode simulation, layout with auto-placer, auto-router, EMC analysis and front panel tool in one program
- All the functions are based on a project file
- Vector graphics with a resolution of 1 nm
- 50 step return/repeat (Undo/Redo)
- Transfer of projects from Protel* and Eagle*, reading-in of network lists in OrCAD* Multiwire and Mentor* format, TARGET ASCII and Gerber* format
- Reading-in of Bitmaps (company logos etc.)
- Administration of layout variants
- Multilayer with blind and buried Vias
- BGAs and COB technology is supported
- Starr-Flex designs possible
- Isolation milling
- Output to all Windows printers in Gerber*, XGerber*, Excellon*, S&M, DXF, PostScript* and TARGET-ASCII (*Protel, Eagle, OrCAD, Gerber, Excellon and PostScript are registered trademarks belonging to their respective owners)
- New hybrid auto router
- Setting a panel
- Generate test points
- Solder stop/solder paste can be set individually per pad/DuKo
- Selection assistant (selection of elements with definite properties)
- Eagle export
- List of the last 20 components used
- Revised component and model libraries
- On-line DRC (Design Rule Check)
- Export format *.idf for transfer into 3D-CAD design programs

System requirements:

- Operating system Windows 98/ME/NT4/2000/XP/VISTA
- Processor AMD Athlon or Intel Pentium III
- Main memory 64 MB
- Graphics At least 1024 x 768 points and 256 colours
- CD-ROM drive
- Internet access Required for certain functions: Program updates, library updates, on-line library, datasheets, further supplier information etc.

Light version: max. 400 pins/pads, max. 2 layers, simulation: max 30 signals

Smart version: max 700 pins/pads, max. 2 layers, simulation: max 50 signals

Economy version: max 1,000 pins/pads, max 4 layers, simulation: max 75 signals

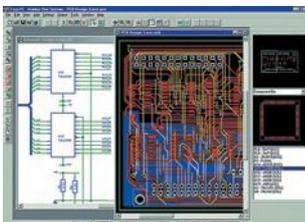

Professional version: Pins/Pads unlimited, max 100 layers, simulation: max 100 signals

Design Station version: Unlimited number of Pins/Pads and signals for simulation, max 100 layers.

Easy PC for WINDOWS™
Electronic CAD

NUMBER ONE SYSTEMS

The Easy-PC For Windows product family is a modern 32 bit Windows based product running under Windows® 95 to XP. Each software module can be used together as an integrated electronics design environment.

Overview:

Easy-PC For Windows is an advanced professional Schematic and PCB design system. Easy-PC allows the user to draw the schematic and simulate it using the Easy-Spice A/D mixed mode simulator. The Schematic editor enables easy modification of the components and values to check the performance of the circuit as required. Once the circuit is correct, within the same environment and using the same libraries, the schematic is translated to the PCB design editor and the printed circuit board is laid out. The Easy-Router II autorouter enables the conversion from the "rats-nest" into copper tracks. At all times the connectivity and design rules can be checked automatically to ensure that the PCB matches the schematic and that all the rules set have been obeyed. The software is available in four different levels of functionality ranging from a low cost edition with 500 pins to a full "unlimited pins" version.

System Features

- Fully integrated 32 bit Windows program
- Schematic and PCB design editors included as standard
- Supplied with libraries and easy editing library manager
- Library wizards for easy creation of library items
- Project browser maintains projects
- Unlimited Undo and Redo
- Link to optional integrated Spice based A/D mixed mode simulator
- Support true mixed imperial and metric design units, resolution down to 1/100th micron
- Rotation steps of all design items to 1/10th degree
- Comprehensive design rules checking between schematic and PCB designs at all times
- True connective database, everything stays connected when moved or edited
- Supports TrueType fonts - makes drawings look professional
- Export Windows Metafile format
- Optional integrated "autorouter" available for 500 pin version (supplied with 1000 and 2000 pin versions)
- Supplied on CDROM and with a 300+ page Users Guide

Professional PCB Layout

- A professional PCB design package capable of dense complex PCBs or simple single sided designs
- Pin limited variants available for 500, 1000, 2000 and unlimited pins
- Unlimited Layers (of any type)
- Supports through-hole and SMD technology on both sides of the board
- True shape based copper pour partial or full power planes, also supports split power planes
- Integrated with Easy-PC Schematics
- Accepts netlists from other systems such as OrCAD and EWB
- Nets dynamically optimized as components are moved on-screen
- Full design rules checking online and dialogue driven checks
- Customisable report writer for Parts and Net lists
- Measure gap tool
- Integrated "Autoplace" of components
- Import and Export to DXF
- Import of Gerber files (optional)
- Output to Gerber RS-274-D and extended Gerber RS-274-X formats available
- Plotting of Solder and Paste masks, and other special plots
- Output to Pen plotters and Excellon NC Drill
- Output to all Windows printers - colour and B/W, any scale
- Parts lists and Bill-of-Materials in report format and CSV format

Professional Schematic Capture

- Flat or project based multi-sheet schematics
- Forward and back annotation from PCB
- Cross probe designs between SCM / PCB and vice versa
- Dynamic drag and drop move of items
- Drag and drop of Components to/from Component Bin
- Intelligent busses
- Supports off-sheet nets, global nets and automatic power rails
- System defined and user defined net names
- Find facility of X,Y, Components, Nets, and Relative origin
- Automatic updating of PCB design from Schematics
- User defined Colours of design items
- Schematic symbol wizard for fast symbol creation

System requirements: Pentium PC with at least 64MB of RAM, 50MB of hard drive space, runs under WINDOWS® 95 to WINDOWS® XP.

Easy Spice

Spice based A/D mixed mode simulator

NUMBER ONE SYSTEMS

Based on a high performance Spice engine, the Easy-Spice simulator is capable of analogue, digital and mixed-mode designs.

System Features

- Simple to understand and use
- Supplied complete with a 400 page comprehensive Users Guide, including a step-by-step guide to getting you started
- In-depth analysis of the Schematic circuit using rich set of features

- Spice engine highly modified and tuned, based on XSpice core
- Full Integration into the Easy-PC For Windows Schematics environment
- True mixed-mode simulation
- Graphs of circuit voltages, currents and device powers are produced by attaching probes to the Schematic circuit
- Overlay graphs without rerunning simulation
- Convergence performance trials exceed results from other vendors, successfully simulating 98% of industry standard benchmarks
- 25,000 Spice model definitions and over 15,000 actual models supplied
- Models can be downloaded from external vendors web sites and added
- Analyses - Operating point, DC Sweep, Transient, AC Small signal, Transfer function, Sensitivity, Poles and Zeros
- Advanced waveform analysis viewer with multi-pole grid and axis, cursor measurements and zoom feature

System requirements: Pentium PC with at least 64Mb RAM, 35Mb of hard drive space for Easy-Spice, Runs under Windows 95/98/ME/NT4.0/2000/XP (Win XP recommended)
Note: Easy-Spice requires Easy-PC For Windows

Easy Router II

NUMBER ONE SYSTEMS

Autorouter

Easy-Router II is an integrated autorouter for use with Easy-PC For Windows. Using a shape based algorithm it takes the work out of the design process by taking the electrical connection points in the PCB design (the "rats-nets") and converting them into copper tracking. Once routed, the tracks may then be edited manually to achieve the final PCB layout. This process saves many hours of time and effort compared to the usual manual layout method.

System Features

- Available as a cost option if you already have Easy-PC
- Fully integrated with Easy-PC For Windows
- Full 32 bit application
- Shape based, uses true representation of the design items
- Gridless for maximum track packing
- Uses Easy-PC design resolution of 1/100th Micron
- Employs rip-up and retry technology
- Automatic and auto-interactive routing modes
- Supports SMD, through-hole and mixed technology
- Easy-to-use with minimal setup
- Fully configurable
- View progress in real time on-screen
- Allows interrupt and restart
- Automatic insertion of track stubs to power planes

338680

Note: Easy-Router II requires Easy-PC For Windows

Gerber Import Facility

NUMBER ONE SYSTEMS

The **Gerber Import** option is an integrated feature for use with Easy-PC For Windows. It is capable of reading in Gerber files produced by Easy-PC For Windows or outside systems. Use this option to check Gerber files before being sent to be manufactured, or for minor modifications where the original PCB design does not exist or has not been supplied.

System Features:

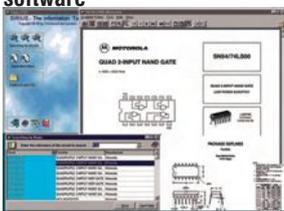

- Integrated within Easy-PC For Windows
- Easy to use
- Auto-detects and Imports RS-274-X format
- Rebuilds drill hole data automatically from RS-274-X format files
- Imports RS-274-D format files with aperture table entry
- Provides flash to pad style conversion
- Imports electrical and non-electrical Gerber data e.g. Silk screen, and component/solder layers
- Imports and rebuilds board outline from Gerber file
- Import preferences can be set up e.g. Data origin, units and file format

CIA04 Windows® - The most popular PCB design software

The CIA04 software allows you to design both single as double sided PCB's with help of a computer. It creates automatically layouts of components, (files for printing, export, duplication, etc.)

- Working area maximum 800 x 800 mm
- Grid adjustable from 2,54 mm to 0,0254 mm
- Accuracy of cursor positioning at 2,54mm to 1/100 of 2,54 mm
- 8 different models of components in rectangular, octagonal or square shape, adjustable from 1,2 mm to 8,8 mm, all SMT-device models or free-to-design-models.
- 6 different models of circular connections in 0,3 mm, 0,5 mm, 1 mm, 1,5 mm, 2 mm, 2,5 mm or free-to-design-models
- Positioning, rotation, inverting, mirroring, duplication, (extension with free choice of component library)
- Export of documents with HPGL, HPPCL5, DMP or other Windows orientated printing formats.
- Printed files on plan tracing paper or transparencies are direct usable on UV-exposure systems to create PCB's.

Wiring System

Feed wire into distribution strip

- Quick and easy prototyping method
- For prototypes, repair and pre-production
- Castellated strips keep wiring neat
- Strips are glue fix or press fix for 1.02 holes on 2.54 pitch
- Wiring pencil is well balanced and easy to use
- High quality cost effective
- Quick and easy in use

BS6811 Section 3.1

145-222 Roadrunner Kit

A starter kit is available and comprises the following:-

- 1 off wiring pencil
- 7 off glue-in strips (152mm)
- 30 off press-in strips (51mm)
- 100 off solder pins (100 x 160mm)
- With brake and bobbin of solderable enamel wire
- 1 off green wire, 34m spool (38SWG)
- 1 off pink wire, 34m spool (38SWG)
- 1 off copper coloured wire, 34m spool (38SWG)
- 1 off Eurocard (100 x 160mm)
- 1 off tinned copper wire, 24m spool (33SWG), non insulated

The individual items are available separately

Features of WISHBOARD WB-1XX series:

- Board base use processed aluminium plate to stand high frequency and low static interference
- Spring contact use phosphor bronze/nickel silver, can stand operation more than 10,000 times
- Allow more application of DIP IC pins insertion.
- Insertion Range: 20-29AWG (0.3-0.8mm) wire all dip size components acceptable. (special design over 10,000 insertion cycles.)
- Material - ABS plastic

Features of WISHBOARD WBU-2XX series:

- Exquisite color coordinates for easy recognition
- Comfortable color to help operator for longer time and to avoid eye fatigue
- Body use high class POM plastic steel material to avoid static interference and insertion hole can stand continuous
- Spring contact use phosphor bronze/nickel silver, can stand operation more than 10,000 times
- Allow more application of DIP IC pins insertion
- Insertion Range: 20-29AWG(Ψ0.3-Ψ0.8mm) wire all dip size components acceptable. (special design over 10,000 insertion cycles.)
- Material - POM Plastic

Features of WISHBOARD WBU-5XX series:

- High-class acetal material allows insertion hole to withstand wear and tear without easily deforming, also ideal for high frequency and low static
- Horizontal assembly corresponds to the operation flow design of the PC boards for handy operation
- The power distribution strip provides 4 sections of positive voltage terminals handy for using different voltage at the same time, also 45 connected tie points for negative circuit
- Exquisitely printed coordinates for easy recognition and calculation
- Easy-on-the eyes color for longer operation without eye fatigue
- Durable base stand aluminum nameplate means no static interference
- The dovetail protrusions and recesses designed to connect two adjacent boards tightly together (i.e. perfect size distance from one board to another) and forming a V-shaped cross-sectional groove which allows DIP IC pins inserting across two parts and to increase the rate of utilization
- Insertion Range: 20-29AWG(Ψ0.3-Ψ0.8mm) wire all dip size components acceptable. (special design over 10,000 insertion cycles.)
- Material - POM Plastic steel

SMD/QFP Multiadapter Prototyping Board RE 470

For 23 different SMD/QFP-ICs

- Chemical Ni/AU with solder stop mask
- Prescratched rated break point for the separation of individual modules from the board
- Gerber data for manufacture of the solder resist masks and the soldering paste imprint will be provided free of charge on request
- Size 123 x 203 mm
- Epoxy fibre-glass FR4 1.50 mm double-sided 35 µm CU

- Plated through holes \varnothing 1.00mm
- Pad spacings 0.40mm (15.7mil) and 0.50mm (19.7 mil.)
- Adaption board for 23 different SMD-QFPs

SMD Multiadapter Prototyping Board RE460

For 23 different SMD-ICs

- Chemical Ni/AU and solder stop mask
- Prescratched rated break point for the separation of individual modules from the board
- Manual soldering
- For the SMD individual processing in the laboratory area a freehanded coating of 100 to 200 single spots with precise metering hoppers is possible with grids from 0.50 mm to 1.27 mm
- Reflow soldering by means of purpose made separate SMD templates

Size: 120 x 175 mm
 Material: Epoxy FR4FR4 1.50 mm, double-side 35 µm CU (pth)
 Plated through holes: \varnothing 1.0mm
 Pitch: from 0.5mm to 2.54mm

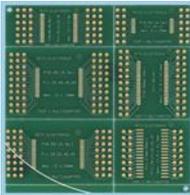

Adaption board for 23 different SMD-ICs
 Pitch and pin assignment:
 0.5mm pitch: 64, 100 Pin
 0.635mm pitch: 164, 132, 120, 100 Pin
 0.8mm pitch: 32, 44, 64, 80 Pin
 1.27mm pitch: 18, 20, 28, 32, 44, 52, 68, 84 Pin

SMD/TSOP-I/II Multiadapter Prototyping Board RE 900

For 14(I) and 7 (II) different SMD/TSOP-ICs

- Pitch spacings: 0.40mm (15.7 mil); 0.50mm (19.7 mil); 0.65mm (26.5 mil); 0.80mm (30 mil); 1.27mm (50 mil)
- FR4 EPOXY fibre-glass FR4 1.50 mm double-sided 35 µm CU
- Plated through holes \varnothing 1.00mm
- Solder and component side with chemical Ni/AU surface and solder stop mask

- Prescratched rated break point for the separation of individual moduls from the board
- Gerber data for manufacture of the soldering paste imprint will be provided free of charge on request

- Size: 72.60 x 76.20 mm
- adaption board for 14 different SMD TSOP I and 7 different SMD TSOP II Chips

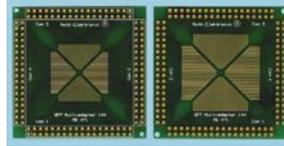

| Chip | Pitch | Pins | Size max/mm |
|---------|-------|----------------|-------------|
| TSOP I | 0.4 | 28, 40, 48, 60 | 12 x 18 |

QFP Multiadapter 144

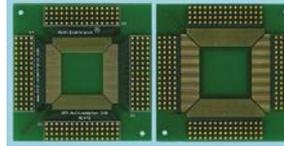

- EPOXY resin FR4 1.50 mm double-sided 35 µm CU (pth)
- chem. Ni/AU
- Two universal QFP layouts for various housing sizes and pin numbers: LQFP, PQFP, TQFP
 - Layer 1: 24 - 144 pins, 0.50 mm pitch, sq.
 - Layer 2: 24 - 144 pins, 0.65 mm pitch, sq.

- Component sides with solder resist mask
- Four pin rail rows 2 x 18 pole, basic grid 2.54 mm, borings 1.00 mm \varnothing
- Size 57,2 x 57,2 mm

SMD/SOT-23 Multiadapter Prototyping Board RE 901

Also for SOT-23/8, SOT-223, SOT-89, TO-252 and SC-75

Multiadapter circuit board with six micro-miniature semiconductor circuits. The PCB can be equipped with twenty different types of semiconductors: **SOT-23** (with SOT-23/3, SOT-23/5, SOT-23/6, SC59, SC74, SC74A, SMT3, SMT5 and SMT6), **SOT-223, TO-252/D-PAK, SOT-89, SOT-23/8** (with SC70, SC88A, UMT3, UMT5 and UMT6) and **SC75** (with EMT3 and SC75A). The board layouts meet the industry standard of the respective semiconductor case size.

| Measurements for | SOT-23/6 | SOT-23/8 |
|------------------|--|------------|
| Pad-Size (mm) | 0.71 x 1.0 | 0.46 x 1.1 |
| Pad-Pitch (mm) | 0.95 | 0.56 |
| Size (mm) | 2.54 | 2.54 |
| Configuration | 2 rows x 3 | 2 rows x 4 |
| Board size | 22.86 x 46.72mm | |
| Board thickness | 1.5mm | |
| Board material | FR4 (single sided 35 µm Cu) | |
| Components side | Chemical nickel/goldsolder stop-off mask and board assembly print | |
| Connections | 8 pole pin terminal connection spacing 2.54 mm, boring \varnothing 1.00 mm | |
| Break off lines | Pre notched to separate the modules | |
| Gerber Data | Tanning data (format Gerber) for production of the solder stop-off mask and the solder paste print are available free of charge on request | |

Self-adhesive SMT contact strips

Glass reinforced epoxy laminate FR4 0.80 mm one-sided 35 µm CU

We recommend you to mount the self-adhesive contact strips on a grounding point motherboard (such as RE201-LFDS or RE334-LF) for optimum use and reduction of interference fields.

The underside mounted double-sided adhesive tape also allows high flexibility in contact strip positioning. It is possible to solder components up before or after

mounting the contact strips. Circuits can also be constituted free of grid-related limits. The greatest advantage, however, that this contact strip system offers is to allow the user independency of package sizes. The self-adhesive contact strips are available with any current pitch spacing.

- scribed predetermined breaking point
- Surface area made from Au
- Size 90 x 100 mm

Prototyping HF-Board RE 334

Eurocard 100 x 160mm

Hole matrix: 32 x 53 single-hole conductors
 Hole spacing: 2.54 x 2.54mm
 Material: Epoxy glass fibre

- 1.5mm thick
- Double-sided 35 µm CU , through plated
- Hot air leveling (HAL-leadfree)
- Connector 32/64/96-channel
- DIN 41612 type C
- The component side is totally laminated by CU

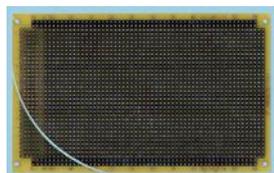

- The through-holes are etched free so that a conducting connection to the other component side is impossible
- If the CU-coating is connected to ground the electrical components are optimally shielded against the solder side
- By this HF, digital and analog circuits can be built up with high reliability
- The component and solder side are laminated with solder lacquer and additional print

- Hole spacing 2.54 x 2.54 mm
- Hole dia 1.0 mm
- Connector 32/ 64/ 96-channel
- DIN 41612 type C
- The component side is totally laminated by copper
- Only the through-holes are etched free so that a conducting connection to the component side is impossible

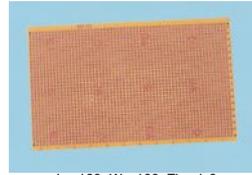

- If the copper coating is connected to ground the electrical components are optimally shielded against the solder side
- By this HF, digital and analog circuits can be built up with high reliability
- EPOXY fibre-glass FR4 1.5 mm double-sided 35 µm CU
- SRBP-paper FR2 1.5 mm double-sided 35 µm CU

Hole matrix: 34 x 54 single-hole conductors
Hole spacing: 2.54 x 2.54mm
Material: SRBP-paper
EPOXY fibre-glass
Pad area: 2.00 mm²
Hole diameter: 1mm

Prototyping Board RE 331/RE 332

Eurocard 100 x 220mm

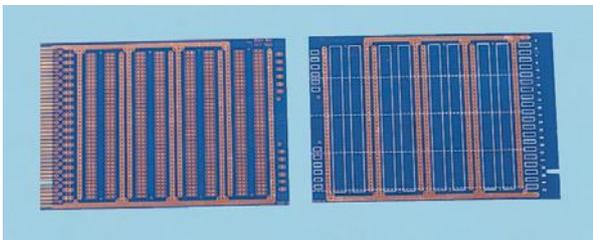

- 1.5 mm single-sided 35µm (Cu)
- Hot air leveling (HAL-leadfree)
- Connector 32/ 64/ 96-channel
- RE331 are double sided and through plated
- For Multibus II systems

Hole matrix: 32 x 81 single-hole conductors Hole diameter: 1mm
 Hole spacing: 2.54 x 2.54mm Operating temperature: max. 150°C
 Material: Epoxy glass fibre Solder bath temperature: 260°C > 50s
 Pad area: 1.9mm 238535

Eurocard Prototyping Board

High Density, double sided

- Double sided, 3 plane
- Double height eurocard
- Copper pattern or ground plane marked "GND" on component side
- Wiring side pattern with two power rails marked "VCC" and "GND"
- Screen may be connected to the "GND" rail by pinning
- Can be used with wire wrapping or discrete component wiring
- DIN 41612 connector mounting holes at one end
- Grid reference

AT Prototyping Board RE 429
Size 114 x 333mm

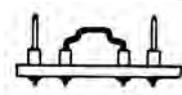

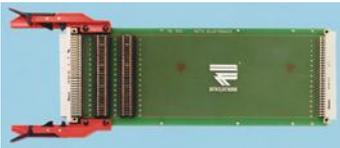

- microprocessor card for the establishment of PC extensions
- system card for the quick building-up of interfaces, data acquisition, memory expansion, graphic complements, etc.
- the micro-card can be provided with a 25 and 9 channel D-subminiature appliance plug for additional I/O transfer
- VACREL solderings stop mask at component and solder side
- potential path for VCC and GND
- all borings are plated through holes
- clear soldering dot screen field
- basic material: EPOXY fibre-glass reinforced laminated FR4, 1.5 mm double-sided 35 μm CU (pth)
- plug contacts:
 - direct 2 x 31 channel, screen 2.54 mm, gold-plated 1.5 μm
 - direct 2 x 18 channel, screen 2.54 mm, gold-plated 1.5 μm
- basic grid 2.54 x 2.54 mm
- working temperature max. 150° C.
- soldering bath proof: 260° C. ≥ 50 Sek.

SMD test card

AL108

AL 108 is a test card, Europe size, for SMD components. With AL 108, you can test soldering and desoldering of SMDs. This card includes different aims to work also with automatic pick & place stations. Finish gets an excellent quality: gold plating and protective solder resist

Key features:

- Conceived for SMD
- Many available types
- Solder resist and gold plating
- Different usages

Available types:

- PLCC 32 / 52 / 68 / 84
- QFP 208S / 100NR / 48NR / 120 / 60
- SOP 8 to 40-45
- MELF and MINI MELF
- CHIP 0402 à 1206
- SOT 143 / 123 / 89

Photo-Resist Coated Boards

- Single and double sided photo resist coated epoxy glass FR4
- Flexible Laminate
- High resolution positive working photoresist
- Photoresist contains a dye to aid inspection during developing
- Recommended cutting method shears

A range of high quality photo resist coated copper clad PCB boards. These boards have a coat-

ing resistant to edge cracking when cut. This eliminates wastage as artworks can make full use of the PCB laminate area.

The flexible laminate is made from a polyester base with a 35µ copper coating and a photosensitive layer on one side. This material is ideal for product prototyping with flexible laminate or for repairs where an existing section of material has to be replaced.

(The flexible laminate is supplied in a sealed black plastic bag and is **not** covered with protective film)

Aluminium and Flexible PCB Material

4147996

4147984

Photosensitised Flexible PCB Material

- Flexible PCB prototyping
- 'Flexiprint' Repair
- 50µ base material with 35µ copper

Aluminium Substrate

- Insulated Metallic Substrate
- Ideal for Heatsinking SMD circuits
- Thermal Impedance 1.3°C/W
- 7kV Insulation Breakdown Voltage
- 130°C Operating Temperature

New ranges of specialist PCB material.

The flexible laminate consists of a 50µ polyester base material with a 35µ layer of copper which has a photosensitive coating. This material is ideal for product prototyping with flexible laminate or for repairs whereby an existing section of material has to be replaced.

The aluminium heat dissipating PCB material consists of a layer of 35µ copper attached to a 150µ ceramic filled, fibreglass reinforced polymer which forms a heat conductive layer with high electrical insulation properties. This is in turn bonded to a 1.5mm aluminium base to offer maximum heat dissipation from the copper side. The material is offered as a solution to heatsinking problems allowing simple PCB designs, it is intended for surface mount (SMD) power devices whereby the board dissipates the heat effectively from the component but also carries the circuit tracks and associated components thus overcoming interconnection difficulties.

Reverse Locking Circuit Board Support, Round Hole

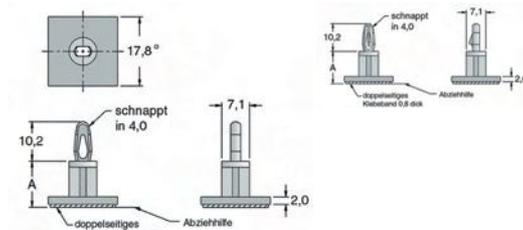

- For Through Hole Mounting
- With domed header, fixed hold on mounting plate and it clears material thicknesses
- Thickness of PCB 1.6 mm
- Borehole 3.2 and 4.0 mm
- Material: polyamide 6.6, RMS-01 UL94 V-2 yellow card E41938

| Manufacturer description | RLCBSR |
|-----------------------------|-----------|
| Thickness of PCB | 1.6 |
| Borehole of PCB | 3.2 |
| Thickness of mounting plate | 1.5 - 1.6 |
| Borehole of mounting plate | 4.8 |

Locking Circuit Board Support - Thread Female

Spacer M3, M4 And Hole \varnothing 3.0

- With on-sided snap-on pilot
- Stable hexagonal construction
- Thickness of PCB 1,8 to 2,1 mm
- Bore hole \varnothing 4,0 mm + 0,1 mm

Material: Polyamide 6.6, black
 Temperature constancy: -40°C to +110°C
 Class of flammability: UL94 HB
 Mounting: 1. Mounting with Befestigung mit thread screw (size depending on construction)
 2. Snap-in to PCP (bore hole \varnothing 4.0 mm + 0.1 mm)

Self Lock

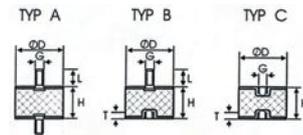

- Manufactured from nylon 6.6
- Meets **UL94V-2** standard
- Type 1 – Wide ribs with locking fingers secure rigid fit with extra stability
- Type 2 – Small footprint, designed to use minimum board area – Suitable for 1.6mm thick boards
- Type 3 – Screw fixing at one end snap in self lock at the other – Attached chassis by No.6. Self tapping screw (not supplied)
- Type 4 – Suitable for fixing through the underside of the chassis

Vibration Mount Cylindrical / Outside/Outside Thread

- For absorption of surges and vibrations.
- The buffer can be loaded to compression, to surge and combined.
- Material: Rubber, Shorehardness 57, and on demand Shore 43 or Shore 68

Hinged Standoffs

Swivelling mounting parts for various applications provide "opening" of several PCBs on top of each other. So for tests they can be placed bevelled in different angles.

Hinged standoffs with two female threads

| Thread size | Length | Dimensions in mm | | | | Steel | Order code |

Hex-Standoff M 2,5
Spacer Type B Male-Female

Material

- Steel 9SMnPb28K (according to DIN 1.0718)
 - Brass CuZn40Pb2 (according to DIN 2.0402)
- Plating according to DIN 267
- Zinc-plated 5 µm (A2E)
 - Nickel-plated 3 µm (E1E)

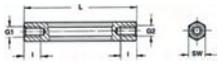

Production Tolerances

- Hex size according to DIN 7168 medium (medium ±0.15 mm)
- Length of half dog point ca. ±0.25 mm
- Screw thread according to DIN 13 part 13, cut
- Screw thread undercut according to DIN 76
- End of screw thread similar to DIN 85 (flat point)

Hex-Standoff M 3
Spacer Type A Female - Female

Material

- Steel 9SMnPb28K (according to DIN 1.0718)
- Brass CuZn40Pb2 (according to DIN 2.0402)

Plating according to DIN 267

- Zinc-plated (chromate clear 5 µm (A2E))
- Nickel-plated 3 µm (E1E)

Production Tolerance

- Hex size according to DIN 7168 medium (medium ±0.15 mm)
- Length of half dog point ca. ±0.25 mm
- Screw thread according to DIN 13 part 13, cut

- Screw thread undercut according to DIN 76
- End of screw thread similar to DIN 85 (flat point)

Interface pins

I-G1S1: The barb avoids that the interface-pin is pushed out of the plate. The pin is wired by the wrap-post.

I-G1: A knurling on the interface-pin ensures, that it does not move even if the drilling-diameter in the plate is differing. The pin is wired by the wrap-post.

I-G1: The barb avoids that the interface-pin is pushed out of the plate. The inner drilling with the bevel can be used as point of contact as well as centering device for the contact pin. The pin is wired by the wrap-post.

Materials and Finishes: Brass, Gold plated

Spring contact pins

F772 Family

The F772 is used in dual-stage fixtures together with the F797. The receptacle H772 permits a variable projection height. The receptacle H712 is used for a fixed projection height of 10mm. This probe is identical to the threaded probe F732.

Barrel: Nickel Silver, Gold plated
Spring: Music wire, Silver plated
Receptacle: Nickel Silver, Gold plated

Spring Loaded Contact

Mounting hole dia = 1.98 (press-fit), 2.16 (epoxy)

A range of spring loaded contact probes for multipoint testing of PCB boards during production. They are designed for either press or epoxy fitting to the test bed. The 143-742 has a gold plated brass concave probe for locating PCB pins and soldered joints, whereas the 143-743 has a stainless steel pointed probe for contact with PCB tracks. Connection is via solder posts.

Spring Loaded Contact Probes and Receptacles

IDI

A range of professional spring loaded contact probes giving a full travel of 0.25" (6.35mm) designed to mate with either solder or wire-wrap receptacles. The probes are available with either a point, serrated or self cleaning tapered crown and tulip head styles and will suit most major manufacturers high speed vacuum ATE equipment.

Processing Equipment

Suction/Filter unit
FILTRATEC-F

Suits to every use into electronic assembly. Each unit includes an built-in filter HEPA + Neutrafil, 2 speeds, a strong and very silent turbine (52 dbA). An on/off remote control without wire is available as an option for the 2 types.

Technical characteristics
Powerful harness
Number of possible connection
Micro filter efficiency (HEPA)
Gas filter efficiency (Neutrafil)
2 filter speeds

Sound level at 1 meter
Ext. Dimensions L x l x H mm
Net weight
Power
Electrical supply

Silent compressor
CS25

CS25 compressor is dedicated to silent compressed air production for needs under 25 litres/min. Those compressors are perfect in areas loud noises are not allowed: laboratory, education, reserach centre etc.

- Very silent
- Easy to handle
- Compact
- Strong
- Equipped in serie with a manode-tender c/w 40 microns filter

Delivered in serie with quick coupling kit and 40 microns air filter

PCB Tinning Machine

112-0365

- Protects Tracks with a Layer of Solder
- Protection Against Oxidation
- Fast Release Roller System
- Fume Extraction Outlet
- Process PCBs up to 220mm
- 1 kW Heater
- 6kg Solder Bath Capacity

This manually operated roller tinning machine is an essential item for the production of professional PCBs. The machine coats the copper tracks of a new PCB with a thin layer of solder, this has the effect of stopping the copper oxidising and makes the PCB easier to solder components to. The unit works by transferring molten solder from a heated reservoir onto a roller, this in turn deposits a thin layer onto the PCB. To assist the depositing of the solder, the PCB must be clean and free of any oxides. Flux and tinning salts are available to assist with the transfer of solder onto the PCB.

PCB Production Tanks

- Two individual process tanks for PCB production R&D and education
- **Bubble Etch** tank with thermostatically controlled heater and air pump for bubble agitation
- **Universal** tank with thermostatically controlled heater for developer, photo resist stripping or tin plating
- Internal tank constructed of one piece polypropylene with integral top surround
- Sturdy outer case of moulded polyethylene with front mounted control panel
- Splash proof lid with full length mesh PCB folder

External dimensions W=178 x H=375 x D=522 Tank capacity 5l
 Max PCB size 320 x 260
 Electrical specification **Bubble Etch & Universal Tank**
 Operating Voltage 240V a.c
 Heater 500W
 Thermostat range +10°C to +65°C

Note: It is recommended that PCB production equipment is used in conjunction with RCCBs

Girojet Etching Machine

- Rotary Spray Etching Action
- Etching Time at 30°C is only 2 Minutes
- Etches Single or Double sided PCBs
- Recommended for use with Super Activated Ferric Chloride
- Vertical Orientation of PCB Ensures Same Fine Resolution on Both Sides

A fast rotary etching machine which is capable of processing a PCB in approximately two minutes (with new super-activated ferric chloride at 30°C). The unit sprays the ferric chloride onto the PCB from two spinning arms, this action along with the vertical orientation of the PCB gives a uniform even finish.

Foam Etching Machine

- Welded PVC Construction with Plexiglass Cover
- Ceramic Diffuser to Produce Etchant Foam
- Membrane Pump
- Pyrex Coated Heaters
- Etching Time 10 -12 Min
- 3 Litre tank Capacity
- Temperature 18°C to 35°C

A foam etching machine in which the ferric chloride is agitated by being forced through a ceramic diffuser, the resulting foam evenly covers the PCB being etched. The PCB is mounted on an incline which keeps the etchant moving across the surface.

3 Tanks etching machine - GR serie

Two models which allows etching, cleaning and developing in a single unit with 3 tanks. A complete clear tank arrangement of 100% welded PVC. Rigid, stable and compact units supplied with two thermostatic controlled heating elements and two air bubble pumps. The Serie GR units allow you to develop prototypes or other to be etched materials in combination with a rinsing tank for DI-water.

- 3 tanks with draining taps
- 3 in 1 : the most practical
- Can be installed anywhere
- No contact with ferric chloride
- Anti-return nozzle
- No need of current water

Spray Etch/Developer 'Rota-Spray'

- Etches PCB's in less than 90 seconds
- 10" x 12" (254 x 305mm) board capacity
- Digital temperature control
- Digital timer control
- Integral Spray Wash tank
- Splash Hopper included
- 5 litre reservoir with low level sensor
- Bottom drain - no syphoning
- Optional Base Unit

The Processing Tank is designed to take multiple small boards or one panel up to a maximum of 10" x 12". It has a transparent case so that the panels can be examined after processing without removal. The lid is fitted with a safety cut-out to stop the motor if the lid is raised during etching. The optional Base Unit places the top of the Processing Tank at an efficient working height of 110cm.

Manual SMT pick and place machine
PRECITEC®

The pick and place station PRECITEC® is a new manual system for the placement of SMT-components. It is a perfect ergonomic station including a lot of functions with an attractive price.

The unique feature of the PRECITEC® station is the small movement in the Z-axis whereas the X- and Y axis movement are realised by moving the portal construction on smooth gliders. This system improves its strength and accuracy. It increases also the working area giving to PRECITEC® place Nr 1 in the market (registered model).

The solid reliable construction provides a better grip for the operator with a larger working area of 350 x 400 mm.

- Perfect ergonomics
 - Compact station with the best working area of the market
 - Low cost machine
 - Compact base but very efficient working area of 350 x 400 mm
 - Can be used by either right or left handed operator without change in configuration
 - A double arm support assures a comfortable position for the operator
 - Sensitive head with 360° rotation of pipette
 - Efficient lighting built-in the arm
 - Vacuum pump integrated in the assembly unit
 - Magnetic board supports
 - Storage containers for SMD's with spring closing lid
 - Optional support for a solder paste dispenser or soldering / desoldering stations
- The Pick and Place station PRECITEC® is delivered complete with :
- Set of different needles
 - Set of needles with different Ø of rubber discs for the prehension of big components
 - 3 Magnetic boards
 - 18 small storage containers for SMD's with spring closing lid.

Visual assistance through video
HELIOS II

Autonomous visual inspection system. Suits to verify solder paste, glue, different types of fluids and SMD installation before and after reflow.

The HELIOS II version adapts to pick and place equipment as PRECITEC® and SMT3000 to be used as a visual assistance during installation.

The HELIOS II version for PRECITEC® & SMT3000 includes:

- 1 colour television or a combined recorder/television (recommended for education)
- 1 high resolution camera mounted on handling arm with rotation around the prehension head.

The HELIOS II configuration is delivered with a audio/video cable. The camera can be connected to any kind of computer, recorder and television with a audio/video inlet. For the combines version television/recorder, the video outlet permits recording a video cassette of the work already done (recommended for education).

Professional manual dispensers
CMS 350 DOTTY, CMS 450 DOTTY

350 DOTTY

450 DOTTY

The professional units for dosing of glues, solder pastes as well as low viscosity products. The dispensers CMS 350 DOTTY and CMS 450 DOTTY can work autonomous or in combination with a pick & place unit. The CMS 450 DOTTY model can be connected to our 3 axes TECHNODRILL machine to make a automatic 3 axes dispenser assisted by computer.

- Facility of use
- Different functioning uses
- Light
- Best quality/price ratio for performance without equal
- Compacts
- 10 programmes (CMS 450 DOTTY)

The DOTTY dispensers can work under many different ways:

Manual: pushing on the pedal, the product deposit will be done when the control is done. Getting of the pedal will stop the deposit.

Semi-automatic: pushing on the pedal, a x quantity of deposit is done once. You need to push again on the pedal to start a new deposit.

Automatic: remaining on the pedal, a x quantity deposit is done every x repetitions until the pedal is getting of.

Learning (for CMS 450 DOTTY model only): This programme automatically defines deposit and repetition times according to work to do. You just need to make 10 manual deposits depending on the requested rate and the unit will analyse, making an average of appropriate times. Once learning mode is finished, the unit will get back to automatic mode.

The dispensers are delivered complete with a set of needles, a set of suction cups, a 10cc syringe, a foot pedal control.

To be connected to a compressed air network or on a compressor

Reflow oven, forced convection for prototypes FT02

FT02 oven has been conceived to the reflow of solder paste and polymérisation of the glues for prototyping. FT02 oven is compatible with high temperature alloys and above all "lead free" ones thanks to its new heating system as well as its electronics.

It includes in line many functions as 10 programmes memorisation, information display upon LCD monitor, a wide viewing window to supervise the process.

For a better safety, FT02 includes a double window with air circulation to avoid any burning risk as well as a blocking door opening to avoid any unwanted opening.

- Complete view of the card thanks to a large window
- Compact model, but working area of 190 x 290 mm
- Heating through forced convection
- Temperature control by microprocessor
- Digital display of different advises: temperature and time
- Easy programmation for immediate control
- Safety: double window with air circulation, closing door access

Reflow oven, forced convection - FT 05

The reflow oven FT05 is a new generation professional oven. It was created to work with the new high temperature alloys, including lead free alloys in force on the 1st of July 2006.

FT05 Key features: Complete view of the card through a large window Compact model but offering a reflow working area of 350 x 400 mm Display on LCD screen of the different advice Memorisation of 10 programmes in line Compatible for high temperature alloys, above all lead free Heat through forced convection. Temperature control by microprocessor. Compatible with SMTix® software Very easy programmation for a simple use Safety: double window with air circulation, locking of the access door, extraction pipe for solder fumes, filtration unit for solder fumes as an option

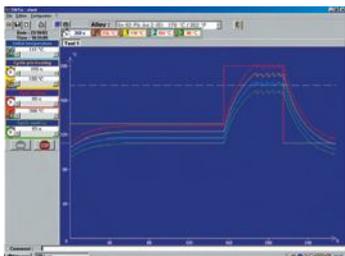

FT05 is suitable SMTix® software (option).

The SMTix® software For FT05 oven

The SMTix® software permits to profile the temperature of the FT05 reflow oven. It includes 2 modes: a "Test"-mode to create reflow profiles and a "Manufacturing"- mode to set the parameters of the oven. Very simple to use, the SMTix® software is a precious help.

Connected to the oven thanks to a simple RS232 link, SMTix® automatically detects the probes connected to the oven.

In the "Test"-mode: this software parameters the oven to test profiles on boards, to view the curve tracing, to validate the tests and to store the data in one of the 10 memories of the oven or computer. Possibility to print the tests done and to add comments to them.

In the "Manufacturing" mode: set of the parameters of the oven from validated and memorised tests. View of the oven probe and curve tracking.

The SMTix® software also detects the problems: broken lamps, dirty oven...

- Easy of use
- Is working in Test or manufacturing mode
- Tests printing in which you can add comments
- Pilot the oven from validated recorded tests
- View of the different temperature probes: 1 in the oven and 3 external

Drilling/milling machine TECHNODRILL

Protection cover

With TECHNODRILL, etch, drill and mill plastic, metal and PCBs. Drilling & milling at high accuracy of PC controlled. Also etches front faces made of aluminium or plastic. TECHNODRILL is the perfect tool to make cutting, etching, drilling, milling and manufacturing...

- Immediate training
- General-purpose: drilling, milling...
- Compatible with any kind of files
- Very accurate guiding of axis
- Real 3 axis
- Piloting in micro-step (avoids mechanical resonances)
- Piloting software GALAAD 3 (with free updating)
- Built-in electronic, microprocessor 32 bits
- Tool feeler
- Safety: mechanical and software fastening
- Built-in light
- Cover as an option

TECHNODRILL: Configurations

A Education configuration (item code C11 000). The machine is delivered with a 900 W spindle and the software GALAAD 3 (free updated and network version).

A Industry configuration (item code C11 020). The machine is delivered with a 900 W spindle and the software GALAAD 3 (free updating).

TECHNODRILL is a real 3 axes 3 D. The software GALAAD 3 is an open software allowing HPGL, ISO, EX-CELLON, GERBER, GCODE, DXF files. The software helps making milling PCBs.

CNC Machine for Isolation Routing

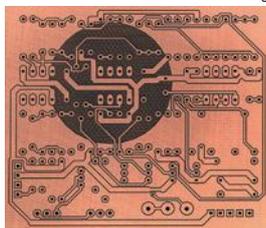

CCD2 CNC machine

CNC drilling

CNC Routing

Example surface milled PCB

- Rigid and flat construction with low moving weights and high quality bearings for high-speed positioning.
- Machine bed with universal fixture system, suitable for both clamps and ref. Pins.
- KaVo high speed, 60,000 rpm spindle motor, 150 W, including 1/8" (3.175 mm) chuck.
- Heavy-duty stepper motor on Z-axis for true milling capability and correct tool speed.
- Standard travel area: 320 x 270 x 30 mm, Sizes (mechanics) approx: 70 x 55 x 30 cm3 (WxDxH)
- Easy semi-automatic tool change, simultaneously 15 out of 99 tools per job.
- Smallest drill diameter: 0.3mm. Drill speed: 5 hits/s (= 18 000 holes per hour)
- Integral depth limiting device for (isolation) milling and engraving on uneven surfaces
- Driver software for Excellon, Sieb & Meyer or HP/GL data
- All machine parameters software controlled and configurable, including Z axis
- Step definition: 1 mil (= 0,0254 mm), precision +/- 1 step
- Maximum speed per axis: 93 mm/s (= 5.6 m/min)
- Sizes (mechanics) approx: 70 x 55 x 30 cm3 (W x D x H)
- Required desktop size: approx. 80 x 80 cm. Weight: approx. 23 kg

The CCD2 is a CNC machine with a processing area of 270mm x 320mm for drilling and routing PCBs and other materials. With additional 'IsoCam' software the machine can be used for 'Isolation Routing' whereby the unwanted copper to produce a PCB is removed mechanically rather than being chemically etched. The CCD2 includes a Kavo high frequency spindle (60,000 rpm) that accepts industry standard tools and has software controlled Z-Axis for optimum processing. Supplied with vacuum for dust extraction. A PC is required to run the machine.

ISOCAM isolation routing software.

Software to manipulate a Gerber photoplot file into a file suitable for isolation routing, the method of routing whereby the unwanted copper to produce a PCB is removed mechanically rather than being chemically etched.

CCD2 enclosure

A floor standing enclosure for the CCD2 that greatly helps contain the noise of the machine. A

clear plastic hinged lid enables easy access to the CCD2 machine. The enclosure has lockable wheels and also features a lockable storage cabinet where tools and accessories such as the vacuum extractor can be stored. Dimensions 620 x 770 x 1140mm.

Consumable accessories

13-111050 Hawera 846 Carbide router 30 tip for isolation routing and fine engraving
700-013-8 60° Router for isolation milling and rub out

SC/FT Chip Breaker Routers

Tungsten Carbide printed circuit board routers with 1 / 8" (3.175mm) shank. The special geometry offers exceptional swarf removal, reduces radial load significantly and produces a very fine surface finish. Total length 38mm. Some popular sizes are offered below although other sizes from 0.8mm to 3.175mm are also available.

- 13-111160 SC/FT Chip Breaker Router 0.8mm
- 13-111163 SC/FT Chip Breaker Router 1.5mm

Drill Entry / Exit Board

- High quality drill entry and exit board for precision drilling with a CNC drilling machine
- 400-265 0.8mm Entry board
- 400-266 1.5mm Aluminium Exit Board

Heavy item, special delivery conditions apply

Low Cost CNC Kit

Note: PCB drill and power supply are not included

Milford Instruments

- Full 3-Axis motion
- Powerful 200 step/rev stepper motors
- Working area of approx 200x150x75mm
- Approx 20 holes per min drilling rate
- Resolution of up to 0.1mm on any axis
- 12-18v DC Power supply requirement at 2A (excluding drill)
- 10A relay for drill control plus spare relay
- Piezo alarm facility
- End-of-travel limit switches
- Comprehensive Windows Driver software
- Accepts standard Excellon Drill files
- Pre-built processor board
- Wooden components ready machined
- Diskette includes frame component details in AutoCad .dxf format
- Self calibration facility
- Detailed user manual

Build and develop your own CNC machine. This 3-Axis Machine will appeal to hobbyists and educational establishments alike. The design uses low cost but effective materials to achieve a standard drilling accuracy of up to 0.1mm (2.5 thou). All woodwork components are ready cut for accurate assembly and each of the 3 axes is driven by a powerful 200 steps/rev 12VDC stepper motor with tension cord for backlash free operation. The design has been developed to require minimal alignment during construction and uses limit switches on each axis for set-up and over-travel protection. Includes two software controlled 10A relays for drill control etc. Shipped with 3 Windows programmes (.exe and VBasic source code provided): PCBDrill, Replay and Plot-It.

Processor board is fully built and tested and uses a pre-programmed PIC. This may be changed out for a Parallax BASIC Stamp2 chip allowing the user to develop their own machine programme (the standard programme used in the machine is supplied on diskette. Kit includes all wooden components and hardware, stepper motors, slides, driver board PCB and components, software diskette and assembly manual.

Requires 12-18v DC @ 4A power supply and a suitable mini-drill.

Precision Drill/Grinder FBS 240/E

For Drilling, Milling, Grinding, Polishing, Brushing, Cutting and Engraving

- Complete with 40 quality inserts in a sturdy plastic case
- With keyless chuck with 0.5 - 3.2mm capacity
- Stable housing of POLYAMIDE with soft components in the finger grip area
- The maximum speed of 20,000rpm is continuously variable down to 5,000rpm
- The full wave electronic speed control results in virtually constant torque, even at lower speeds
- This facilitates micro drilling, brushing and polishing
- The spindle runs in a precision ball bearing and is fitted with a lock button
- 20mm collar fits MICROMOT drill stands and vices
- The machine is fitted with a quality, balanced, low noise motor with high life expectancy
- The FBS 240/E can also be used with the MICROMOT steel collets (Best-Nr. 107-5634)

Technical Data: 5000 - 20000rpm; Maximum power consumption 100W; Voltage 220 - 240 V; Length 200 mm; Weight: 450 g; Insulated according to class 2 requirements; keyless chuck with 0.5 - 3.2mm capacity

Professional drill/grinder IB/E

For Drilling, Milling, Grinding, Polishing, Cleaning, Cutting and Engraving.

- Ideal for mechanics, model builders, jewellers, opticians, artists and electronic enthusiasts
- Quiet, powerful 100W motor with full wave electronics for speeds between 5,000 and 20,000rpm
- Streamlined head of die-cast aluminium for exact bearing seats and optimal stability
- Ball bearing spindle, of ground steel, with lock button for rapid cutter changing
- Quality without compromise: isolation to class 2
- High concentric accuracy (max. 3/100 mm): no juddering or knocking
- With 34 bits & cutters of industrial quality. All shafts ø 2.35 mm. Complete with six triple slit steel collets covering 1.0 to 3.2 mm

Technical Data: 5.000 - 20.000rpm. Power consumption (max) 100W. Voltage 220- 240 V. Stable head of die-cast alu and POLYAMIDE main housing. Length 230 mm. Weight 500 g. Insulated to class 2. The 20mm collar allows fitting of optional drill stands, horizontal stands. Supplied with 34 bits and cutters in a stable plastic case.

Precision Drill MICROMOT 50/E

For Drilling, Milling, Grinding, Polishing, Brushing, Cleaning, De-Rusting, Cutting, Engraving, Marking

MICROMOT 50/E

- Ideal for electronic hobbyists, model builders, tool and die makers, jewellers, opticians, artists, chiropractors, dental technicians, etc
- Useable on any workable material e.g. steel, precious metals, glass, ceramics, plastics, precious stones
- 12V supply allows the safe use of coolant, e.g. when grinding and cutting semi-precious stones
- Stable housing of fibreglass reinforced POLYAMIDE. With soft component in the finger grip area for extended use
- The diameter of only 35mm makes it easy to handle
- The weight of 230g, quietness and effortless drive via the special motor, ground spin-

dle and collar bearing all contribute to the ergonomic design

- The high quality steel collets ensure accurate clamping of the cutters
- No juddering or knocking
- MICROMOT transformers of at least 1A are recommended (**Order Code 107-5600**)

Technical Data: With thyristor electronic speed control. 5.000 - 20.000rpm. Phase angle control and feedback effect circuitry yield high torques, even at low speeds. Six MICROMOT collets for shanks (1.0 - 1.5 - 2.0 - 2.4 - 3.0 and 3.2 mm). Power consumption is 40W max. Length ca. 220 mm, Weight ca. 230 g.

Storage and Tools

PCB Rack

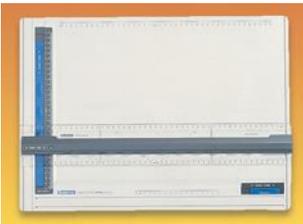

H=315
W=320 (standard)
D=200 (inc. handles)

The antistatic printed circuit rack moulded in carbon loaded polypropylene is designed for safely holding PC boards during all stages of assembly, cleaning and testing. The modules may be combined to give any size, height, width or depth and will accommodate any width of PCB from 15 to 290mm. Two front handles are used to hold the assembly. Supplied complete with two wall mounting hooks, four back strips to prevent the PCB's from sliding out and two 320mm aluminium extrusion rails with nuts and bolts. May be used for transporting PCBs, in plating, etching and washing applications (subject to acceptance of aluminium and steel nuts and bolts in the solutions).

Rapid Assembly Circuit Board Holder

A very high quality, fully adjustable clamping mechanism, ideal for supporting circuit boards during repair. The holder features a four position, spring loaded locking mechanism, allowing the board, once clamped, to be simply moved in every direction through 36°. The vice is also fully height adjustable, allowing a board to be situated vertically between 50 to 340mm from the bench level. The board clamping arms are also adjustable and can be mounted on any of the four sides of the cross-supporting bar. The clamping arms are also fully adjustable in width from 11 to 245mm. The vice is manufactured from high grade, chrome vanadium steel with a cast base for weight and stability which can be bench mounted for added stability.

- Easy turn adjusting wheels for speedy adjustment
- Manufactured in the USA to precise, exacting standards
- The vice weighs 2.9kg

Assembly Jig PCSA with ESD secure spare foam

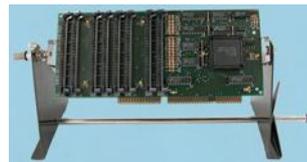

- The series PCSA assembly jigs are ideally supporting at assembling and soldering PCBs
- The jigs can easily be sectioned to its single components and mounted into other combinations
- Components will securely be fixed while cutting and soldering by proof cushion made of foam

ESF120 mounting frame for printed circuit boards

L = 320 W = 160 H = 140

The mounting frame satisfies all requirements made when mounting, soldering and removing printed circuit boards, without the need for additional tools.
 -Clamping area max. 160 x 235mm, Double European format
 -Pivoting range 360° with 15° latching
 -Side parts can be steplessly adjusted, with clamping
 -Moveable arms with clamping pads for securing the components
 -High degree of stability on account of integrated rubber feet
 -Clamping of round and square parts on account of the multi-sided profile of the clamping jaws

PCB and Laminates, 457mm Cut

PC Drills

H = 280, W = 645, D = 400

- A robust, bench mounting hand operated guillotine
- Cut width is 457mm
- Cuts a broad range of paper and plastic based products and laminates, aluminium and brass sheet
- The main structural parts are cast and all linear bearings are bushed for precise and easy movement
- The cutting area is protected on the material side by a transparent plastic guard. The blades are precision ground and accurately adjustable
- Spring loaded material clamp is fitted

Bench Circular Saw KS 230

For perfect straight cuts in wood, NF metals, plastic and PC cards

- The 58 mm diameter "Super-Cut" blade (included) cuts soft woods up to 8 mm, plastics (Pertinax too) up to approx 3 mm, NF metals up to approx 1.5 mm
- Fibreglass reinforced PC cards could be cut with the tungsten blade
- The 85 W VDE tested motor is quiet, operates off 220 - 240 V and has a prolonged life expectancy
- Power transmission by toothed belt via ball bearing, housed in sturdy casing, ensures the right blade speed for the job (approx. 5,000 rpm) with a doubling of torque and a good cutting depth
- Machined, die-cast aluminium table (160 x 160 mm)
- Adjustable fence with scale
- Graduated mitre stop
- The side door allows easy sawdust removal
- Overall size approx. 240 x 180 x 80 mm. Weight 1.8 kg

Crosscut Blade "Super-Cut" NO 28 014

58 mm diameter (10 mm bore). 80 alternately set teeth. Ideal for hard and soft wood as well as plastic and Pertinax. For fast, clean cuts. Teeth are individually set and sharpened. Superior cutting power!

Solid Carbide Saw Blade NO 28 011

50 mm diameter (10 mm bore). 0.5 mm thick fine toothed. Ideal for cutting fibreglass sheets, NF metals, duro-plastics and other difficult materials.

Diamond Blade NO 28 012

50 mm diameter (10 mm bore). With 0.5 mm layer of class D107 diamond for cutting ceramics, as well as fibreglass sheets.

Spring Steel Saw Blade NO 28 020

50 mm diameter (10 mm bore). Fine teeth. Designed for precision cutting.

Storage and Tools - continued

Bench Circular Saw KS 230 - continued

For perfect straight cuts in wood, NF metals, plastic and PC cards - continued

Tungsten Tipped Saw Blade NO 28 016

50mm Ø x 1.1 mm (10 mm bore). 10 teeth. Used to cut hard and soft woods, PC cards, PERTINAX and Alu.

Tungsten Tipped Saw Blade NO 28 017

50mm Ø x 1.0 mm (10 mm bore). 20 teeth. For extremely clean cuts of balsa, plywood. Can also be used for cutting PC cards and POLYCARBONATE.

Cut-off / Mitre Saw KGS 80

For clean, safe cutting to length of NF metals, plastic and wood

28 729

28 732

- This machine is ideal for mitre cuts: the round worktable with clamped work piece rotate, not the head-stock!
- Laterally moving saw head to minimize distance between vise holding the work piece and kerf. For cutting without vibration and chattering.
- The fence and 45° mitre capability ensure identical lengths for picture frames.
- Comfortable grip with built-in switch and saw head release button.
- Tungsten carbide blade for NF metals, wood and plastic. Direct drive via a toothed belt.
- Round table made of die-cast alu, rotates 45° left and right. Positive stops in 15° increments.
- Integrated clamping system with fixed jaws. V-slot for round work pieces. Front side slot allows thin pieces to be clamped

Technical Data: 220 - 240 V. 200 W. 50/60 Hz. 4,000 rpm. Table size 230 x 230 mm. Weight approx. 6 kg. Consult the table for cutting capacities.

40,000 PRICES REDUCED

PCB Processing Chemicals

Ferric Chloride (FCC)

- Sealed packet of ferric chloride hexahydrate for etching copper clad boards
- Dissolve the packet (250g) in warm de-mineralised water
- Makes up to 500ml
- Solution may be heated to lengthen life

Photoresist Developer (PDN)

- An alkaline, aqueous developer for positive photoresists particularly PRP200
- Dilute 1 to 4 with de-mineralised water and use at above 20° C

Photoresist (PRP)

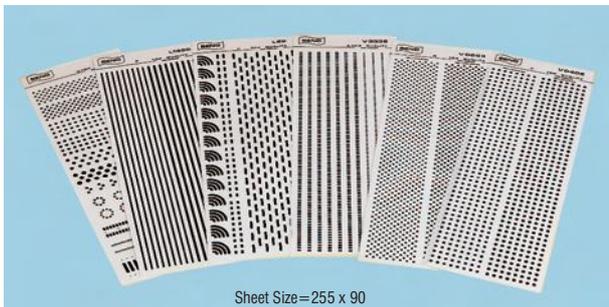

- Fast drying positive photoresist aerosol
- Use for one to one reproduction of circuits etc., on metal from transparent positive masters
- Intended for PCB prototyping but may be used for areas of technical or artistic reproduction

Laser Film

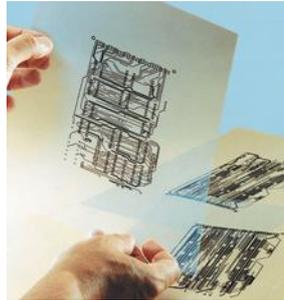

- Specially formulated translucent film for high resolution production of PCB artwork directly from any laser printer
- 75 micron base specially coated to allow keying and fixing of toner
- For laser printers and photocopiers enabling artworks to be produced from printed originals
- Available in A4 (210 x 297mm) or A3 (420 x 297mm)

204630

JetStar Draughting Film

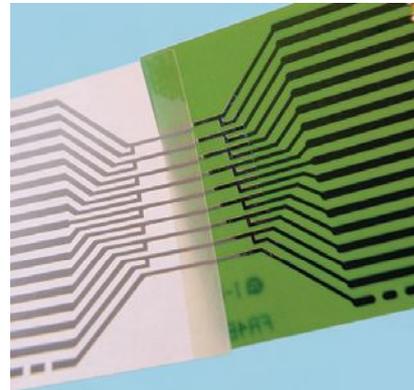

- For use exclusively with EPSON inkjet printers
- A4 (210x297mm) or A3(420x297mm)
- For master artwork production

A new specially formulated, inkjet film for the production of dense artwork photo tools. The film is designed for use with a wide range of EPSON ink jet printers. The coating on the film allows a dense image to be reproduced without the ink bleeding. available in A4 and A3 format (10 sheets per pack)

Electrically Conductive Tape 9703

A permanently tacky system consisting of a pressure sensitive adhesive (PSA) matrix with aligned conductive particles, the PSA properties make it easy to handle and apply without the need for thermal bonding. Many applications require mechanical back-up to achieve long-term electrical reliability.

- Pressure sensitive adhesive (PSA) transfer tape with anisotropic electrical conductivity
- PSA tack properties provide an instant bond with minimal pressure and make for ease of use in assembly operations
- Good adhesion to common PCB substrates such as copper, gold, polyimide, polyester, Kapton™, FR-4 epoxy

Typically used for:

- Interconnection of silver ink/polyester flexible circuits
- A membrane touch switch to flex circuit attachment
- EMI/RFI shield attach

| | |
|---|-------------------------------------|
| Adhesive: | Acrylic |
| Contact resistance/resistivity: | 1.25 μΩ-inch ² / 1.6Ω-cm |
| Minimum suggested gap between contacts: | 0.4mm |
| Minimum suggested contact area (per pad): | 0.005 inch ² |
| Tape only thickness | 0.05mm |
| Liner thickness | 0.127mm |
| Conductive material | Particle |
| Operating temperature | 15 to 70°C |

XYZ Axis Tape

XYZ-Axis electrically conductive adhesive transfer tapes have all the qualities required for reliable and effective attachment of EMI/RFI shields and gaskets to electronic devices. 9712 tape is for applications with moderate electrical requirements. For critical electrical requirements use 9713 tape.

It's in the fibres:

- Wiping action creates good electrical contact
- Spring-loaded tension maintains electrical contact
- Reinforcement gives the tape excellent handling characteristics
- Eliminates gaps along device/shield interface to prevent emission leaks
- Isotropic conductance
- Non-corrosive adhesive increases life of shield and allows attachment of dissimilar metals. Long-lasting adhesion
- Low resistance for increased shielding effectiveness
- Fast assembly

Typically used for:

- Attaching foil laminate EMI shields to electronic and electrical devices
- Can be applied in strips or die-cut to specific shapes and sizes
- Compared to screws or other mechanical connector provides reduced assembly time and a solid bond-line with no gaps for EMI emission

Adhesive:

Posireflex Daylight Film

AR7

Format
240 x 330 mm

Mfrs. List No.
AR7

Obtains a positive film from a page of plans. Dish development, exposure to UV. Autoreversal daylight film, size 240 x 330 mm, item code AR 7

Characteristics :

0.1mm (0,004") polyester permanent antistatic silver based film (very high black density)
 Great dimensional stability, Exposure coating against coating
 Dimensions 240 x 300 mm

Applications

Direct copying of paper positive onto films, Reproduction and multiplication of films

SMT starter kit, LEAD FREE

Set including a selection of basic products and accessories dedicated to SMD dispensing, placement and repair. Those products are stored into a PVC rigid box to ease the storing operations.

Conform to European decrees 2002/95/CE of 01/27/03 and 2002/96/CE of 01/27/03.

A SMT starter kit, lead free dedicated includes :

- 1 syringe 10 cc of no clean solder paste Alloy Sn96,5Ag3Cu0,5
- 1 flux cleaner, 400 ml spray
- 1 syringe 10 cc of gel en gel for repair
- 1 set of 50 polyethylene needles \varnothing 0,40 mm
- 10 SMD boxes, type B2
- 1 heating tweezers, SMD dedicated
- 1 roll of 0,50 kg solder wire of \varnothing 0,5 mm Alloy Sn96,5Ag3Cu0,5.
- 1 universal cleaner for solder tips
- 1 tip/nozzle repair set
- 1 set of 25 high resistance dust cleaners

Professional solder-resist mask Kit

Kit composition:

- 1 x 1 kg lacker pot ref AR70A
- 1 x 250 g hardener pot ref AR70B
- 1 x litre developer ref AR72
- 1 x litre cleaning solvent ref AR71
- 1 x wire applying 250 mm ref AR68
- 1 x cleaning kit for wire applying ref AR69
- 1 x development plastic tray ref AR23
- 5 x mixing plastic tray
- 1 x cooking box ref AR69

For professional Printed Circuit Board without investment. This solder-resist mask is used as a pre-sensitised printed circuit. Design and characteristics are identical to serial production PCB.

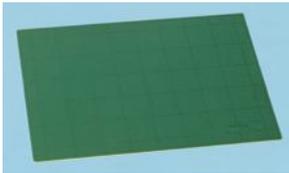

Better definition than screen-printing. No need to buy extra machine as for dry film (brusher, laminator). No PCB surface processing required.

| | |
|------------------------------|--|
| Technical characteristics | Professional solder-resist mask kit |
| Colour | Green |
| Completion | Brilliant |
| Viscosity | 240 Ps for 25°C |
| Storage | 6 months in a cool area |
| Mixing using time | 96 hours for 25° C |
| Welding in fusion resistance | 260°C, 10 seconds, 6 times |
| Flame resistance | VO - UL 94V0 (290°C 20seconds) |
| Chemicals resistance | Boiling water, H ₂ SO ₄ , H Cl, Na OH à 20°C for 60min |
| Solvents | Alcool Isopropylique, Trichlorethane, MEK à 20°C 60min |
| Electrical insulation | 1x10 Ohm |
| Dielectrical constancy | 3,7 - 1MHz |
| Dissipation factor | 0,03 - 1MHz |
