A/D & D/A Converters	279
Amplifiers	304
Analogue Multiplexers, Multipliers & Switches	339
ARM™-based Controllers & Support Tools	232
Bus Isolators, Switches & Transceivers	345
Clock Conditioning, Counters & Dividers	349
Communications - Wireless & Wireline	349
Comparators	261
Crystals, Oscillators, Filters & Resonators	261
Digital Potentiometers	432
Digital Signal Processing	245
Drivers - HID, Laser, LCD & LED	438
F/V & V/F Converters	437
Filters	438
Hall Effect Devices	439
Interface	445
Logic - 74/4000/ECL Series	58
Memory - SRAM, NVRAM, PROM, & FLASH	104
Microcontrollers & Microprocessors - 8-Bit	131
Microcontrollers & Microprocessors - 16/32-Bit	205
Microprocessor Support ICs	252
Motion & Motor Control ICs	457
Power Supply ICs	469
Programmers & Erasers, Emulators, Testers & Analysers	123
Programmable Logic & Gate Arrays	87
Sensors - Capacitive, Touch & Pressure	511
Special Function ICs & Support Tools	516
Temperature Controllers & Transducers	521
Timers	527
Transistor Arrays	528
Video & Audio ICs	529
Voltage References & Regulators	537
Semiconductors Linecard	783

Quick quotes, competitive prices

Got a target price? Need a high quantity of components?

Source your products at the most competitive prices with quick quotes from Farnell;

- Rapid quote turnaround time for your Bill of Materials
- If your order exceeds our highest price break, we'll provide a bespoke price
- Challenge one of our quote specialists to meet your target price
- Same day despatch on all stocked items

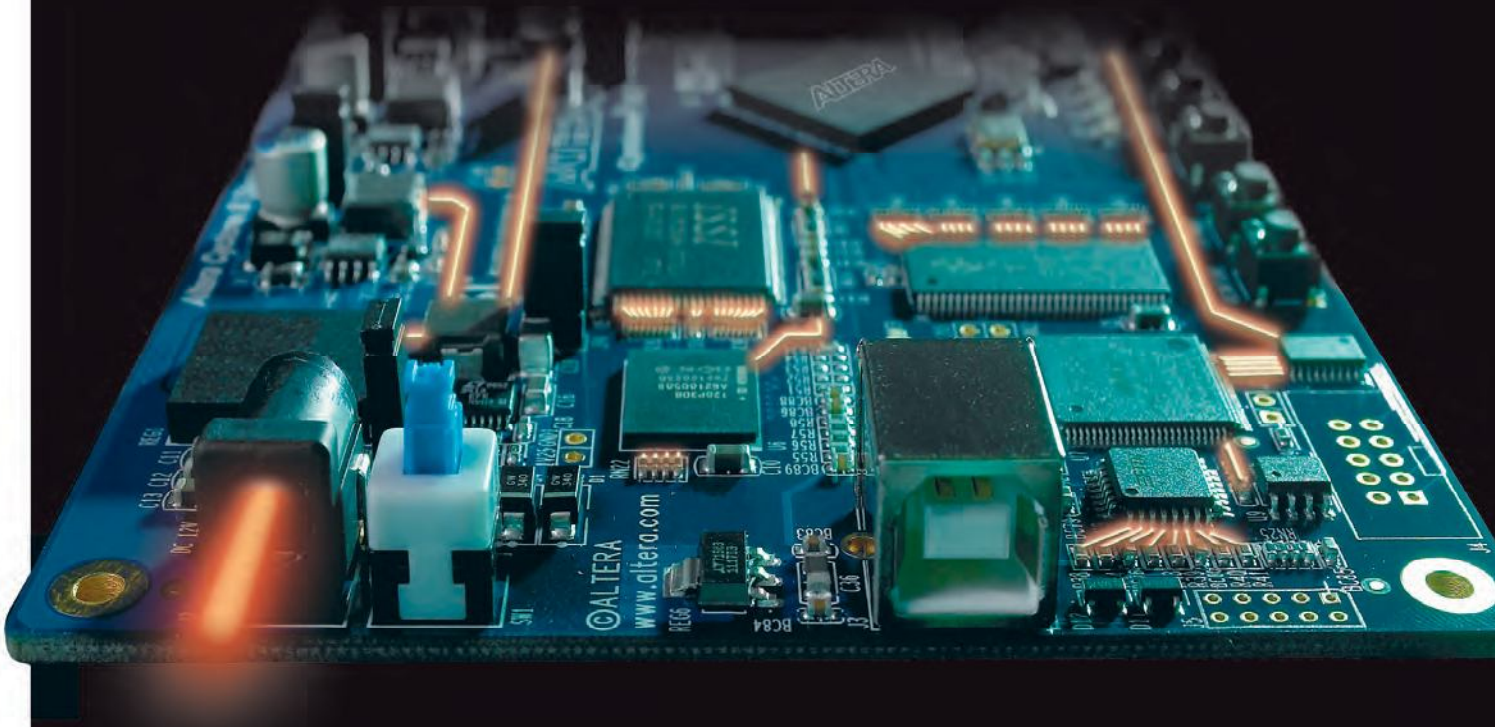
Contact our Quoting Team today at **quotes@farnell.com**

Farnell

A Premier Farnell Company

5 great reasons to register online

1. Even more choice with over 480,000 products
2. 700 new products added online every week
3. Search from over 352,000 technical datasheets
4. Latest pricing and exclusive promotions
5. Plus, advanced technical & legislation advice



Register today

www.farnell.com

A Premier Farnell Company

Farnell

Advanced FPGA solutions for improved board performance!

Complete Altera product portfolio now available at Farnell:

- Extensive range of over 270 products and technologies including the unique Cyclone III and Max IIZ
- Unprecedented combination of low power, high functionality and low cost with Cyclone III
- Latest FPGA technology, to compliment your microprocessor and DSP selection
- Full attribute and data sheets for each and every product available online

Cyclone III

View the complete FPGA range online now at www.farnell.com

74AUP Advanced Ultra-low Power CMOS Logic

74AUP Advanced Ultra-low Power CMOS Logic

The AUP logic family provides a solution to low-power logic needs within the industry. The family ensures a very low-static and dynamic power consumption across the entire voltage range making it ideal for applications that are battery-powered.

74AUC Advanced Ultra-low Voltage CMOS Logic

74AUC Advanced Ultra-low Voltage CMOS Logic

New

The AUC logic family is a sub 1V family that also offers I_{off} for device protection. The AUC family operates at a low power and a high speed while maintaining overall system signal integrity.

74VHC Very High Speed CMOS Logic

74VHC Very High Speed CMOS Logic

An enhanced version of the industry's popular high speed HC family, offering low noise and low power. Operates at three times the speed and with twice the drive of HC technology. The devices have true CMOS inputs.

74LVC Low Voltage CMOS Logic

74LVC Low Voltage CMOS Logic

A range of devices fabricated from EPIC™ (Enhanced-Performance Implanted CMOS) process. Low voltage operation 2.7V to 3.6V with 3.3V/5.5V tolerant inputs. <0.8V ground Bounce at 3.3V and enhanced ESD protection.

IDTQS QuickSwitch Logic

IDTQS QuickSwitch Logic

New IDT

The QuickSwitch logic family is designed for high-speed bus connection and logic replacement. These devices have a sub-nano-second propagation delay, zero added noise and timing skew, and no additional static power dissipation.

74FST Fast Bus Switch CMOS Logic

74FST Fast Bus Switch CMOS Logic

FAIRCHILD SEMICONDUCTOR

These are High Speed CMOS TTL-compatible bus switches with low On-Resistance which allow for inputs to be connected to the outputs with minimal propagation delay and without additional ground bounce noise generated.

74ABT Advanced Bus Interface Logic

74ABT Advanced Bus Interface Logic

As well as offering the fastest speeds available, each ABT device delivers low power dissipation and low noise during simultaneous switching of all outputs. In addition the Philips QUBiC advanced BiCMOS process offers standby power of essentially zero.

Emitter Coupled Logic (ECL)

Emitter Coupled Logic (ECL)

These ECL devices offer high-speed operation with low skew and jitter, the range includes clock distribution and translation devices for interface to other logic families. The family is particularly suited to broadband communications including fibre data transmission, wide area networking (WAN) and Automatic Test equipment (ATE).

Programmable Logic Devices

GAL® Generic Array Logic (Trademark of Lattice Semiconductors) devices are fabricated using very high-speed Electrically Erasable CMOS (E^2CMOS), which offers the highest degree of testability and quality of any process technology, as well as instant erasability, making GAL devices ideal for prototyping and manufacturing. GAL devices can directly replace PAL devices in nearly every application. They offer the low power consumption of CMOS (¼ to ½ that of bipolar devices). Output logic macrocells are utilised to allow the user to configure outputs as needed. By bringing all these features together into a single product line, the GAL family is ideally suited to replace TTL random logic, low-density gate arrays, and all other programmable logic. The GAL family offers the benefits of reduced system cost, product size and power requirements, as well as higher reliability and greater simplified system design.

ATF16V8, 22V10 EEPLDs

The ATF16V8CZ & ATF22V10C are high-performance CMOS (electrically erasable) PLDs that utilise Atmel's proven electrically erasable Flash memory technology. All speed ranges are specified over the full 5V ± 10% range for industrial temperature ranges.

The ATF22V10CQZ provides a zero power CMOS PLD solution with 5V operating voltages, powering down automatically to the zero power-mode through Atmel's patented Input Transition Detection (ITD) circuitry when the device is idle, offering zero (25 µA worst case standby power.

ATF15XX-DK3 Development/Programming Kit

This CPLD Development/Programmer Kit is a complete development system and an ISP programmer for the ATF15xx family of industry standard pin CPLDs. The kit provides designers with a very quick and easy way to develop prototypes and evaluate new designs.

Kit Includes:

- CPLD Development/Programmer Board
- 44-pin TQFP Socket Adapter Board
- Atmel CPLD ISP Multi-Volt Download Cable
- Atmel PLD Software CDs
- Two 44-pin TQFP Sample Devices

ATF15XX, ATF25XX CPLDs

The ATF150x are high performance, high density complex programmable logic devices that utilise Atmel's proven electrically-erasable technology. These devices easily integrate logic from several TTL, SSI, MSI, LSI and classic PLDs. The enhanced routing switch matrices increase usable gate count and the odds of successful pin-locked design modifications.

The ATF2500C is a high-performance CMOS (electrically-erasable) programmable logic device (PLD) that utilizes Atmel's proven electrically-erasable technology. With its fully connected logic array and flexible macrocell structure, high gate utilization is easily obtainable.

Ultra37000 CPLD Family

The Ultra37000™ family of CMOS CPLDs provides a range of high-density programmable logic solutions with excellent system performance. The architecture is based on a number of logic blocks that are connected by a Programmable Interconnect Matrix (PIM). Each logic block features its own product term array, product term allocator, and 16 macrocells. The PIM distributes signals from the logic block outputs and all input pins to the logic block inputs.

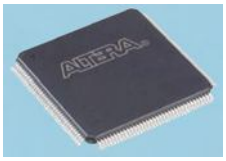
CDROM Programmable Logic Techniques ELPLD



This CD ROM gives a thorough introduction to programmable logic design techniques to CPLD and FPGA programming using Altera's Quartus II Web Edition software. The CD starts with an introduction to designing with Quartus II using block diagrams, at basic and intermediate levels. Then the CD ROM takes students through the process of developing combinational and sequential logic designs using both Verilog and VHDL descriptor languages. The CD is suitable for those who have some experience of digital logic and want to get to grips with modern CPLD and FPGA techniques. A number of example projects in block diagrams, Verilog and VHDL are included.

- Complete guide to logic design using Quartus II
- Includes example projects
- Includes courses in both Verilog and VHDL

ACEX™ 1K FPGAs

ACEX 1K devices provide a die-efficient, low-cost architecture by combining look-up table architecture with embedded array blocks. LUT-based logic provides optimized performance and efficiency for data-path, register intensive, mathematical, or digital signal processing designs, while EABs implement RAM, ROM, dual-port RAM, or first-in first-out (FIFO) functions. These elements make ACEX 1K suitable for complex logic functions and memory functions such as digital signal processing, wide data-path manipulation, data transformation and microcontrollers, as required in high-performance communications applications.

FLEX 6000 / 8000A PLDs

ALTERA

New

Altera's Flexible Logic Element MatriX (FLEX®) family combines the benefits of both EPLDs and FPGAs.

The FLEX 6000 programmable logic device family provides a low-cost alternative to high-volume gate array designs. The devices have reconfigurable SRAM elements, which give designers the flexibility to quickly change their designs during prototyping and design testing. FLEX 6000 devices are reprogrammable, and they are 100% tested prior to shipment.

FLEX 8000 devices provide a large number of storage elements for applications such as digital signal processing (DSP), wide-data-path manipulation, and data transformation. These devices are an excellent choice for bus interfaces, TTL integration, coprocessor functions, and high-speed controllers. The high-pin-count packages can integrate multiple 32-bit buses into a single device.

FLEX 10K PLDs

ALTERA

New

The FLEX 10K® embedded programmable logic family delivers the flexibility of traditional programmable logic together with the efficiency and density of embedded gate arrays. The family spans three process generations. The 2.5-V, 0.22-micron FLEX 10KE devices average 20% to 30% faster than the equivalent 0.30-micron FLEX 10KA devices, which operate at 3.3 V. Similarly, FLEX 10KA devices are an average of 20% to 30% faster than the 0.42-micron FLEX 10K devices, which operate at 5.0 V.

MAX3000/7000 Programmable Logic Devices

ALTERA

SMD

New

MAX 3000A devices use CMOS EEPROM cells to implement logic functions. The user-configurable architecture accommodates a variety of independent logic functions. The devices can be reprogrammed for quick and efficient iterations during design development and debugging cycles, and can beprogrammed and erased up to 100 times.

The MAX 7000 family provides programmable speed/power optimisation. Speed-critical portions of a design can run at high speed/full power, while the remaining portions run at reduced speed/low power. MAX 7000E and MAX 7000S devices also provide an option that reduces the slew rate of the output buffers, minimizing noise transients when non-speed-critical signals are switching.

MAX II Development Kit

ALTERA

Altera's MAX® II Development Kit comes with a complete design environment. The kit enables users to evaluate the MAX II feature set or begin prototyping a design prior to receiving custom hardware. It includes all software, cables, and accessories needed to ensure an easy and productive evaluation of the MAX II CPLD.

Contents:

- MAX II Development Board
- Quartus® II Web Edition design software
- Cables and accessories
- Reference designs and demos for MAX II

Altera MAX-CPLD Value Pack

ALTERA

LEAP ELECTRONIC CO.,LTD.

Altera's MAX® II Development Kit comes with a complete design environment. The kit enables users to evaluate the MAX II feature set or begin prototyping a design prior to receiving custom hardware.
Leap Electronics design board is programmable so the operation can be changed using only software alterations, instead of the constant design and manufacturing of small circuits using a number of logical devices on a bread board.
This value pack allows the user to Weigh Costs against features, benefits and performance.

This value pack gives the user an option to weigh costs against features, benefits and performance.

MAX II EPMxx CPLDs

ALTERA

SMD

The MAX® II family of instant-on, non-volatile CPLDs is based on a 0.18-µm, 6-layer-metal-flash process. Featuring MultiVolt™ core, a user flash memory (UFM) block, and enhanced in-system programmability (ISP), MAX II devices are designed to reduce cost and power while providing programmable solutions for applications such as bus bridging, I/O expansion, power-on reset (POR) and sequencing control, and device configuration control.

MAX IIZ CPLDs

The MAX® II family of instant-on, non-volatile CPLDs is based on a 0.18-µm, 6-layer-metal-flash process, with densities from 240 to 2,210 logic elements and non-volatile storage of 8 Kbits. These devices offer high I/O counts, fast performance, and reliable fitting versus other CPLD architectures. Featuring MultiVolt core, a user flash memory (UFM) block, and enhanced in-system programmability.

Arria GX FPGA Development Kit

This development kit delivers a complete environment for the development and testing of designs implementing high-speed serial interfaces in Arria GX FPGAs. It is built on a PCIe form-factor card and targets the development of designs utilizing PCI Express x1 and x4, Gigabit Ethernet, and/or Serial RapidIO® (SRIO) protocols.

Kit Includes:

- Arria GX development board
- Quartus® II Web Edition design software
- PCI Express Development Kit, Arria GX Edition CD ROM
- Cable and accessories

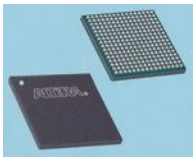
Arria GX FPGAs



The Arria™ GX family of devices combines protocol-optimized serial transceivers with reliable packaging technology and a proven logic array. They include 4 to 12 high-speed transceiver channels, each incorporating clock/data recovery (CDR) technology and embedded SERDES circuitry optimally designed to support PCI-Express, Gigabit Ethernet, and Serial RapidIO protocols.

Programmable Logic Devices - continued

Cyclone FPGA Family

The Cyclone® field programmable gate array family is based on a 1.5-V, 0.13-µm, all-layer copper SRAM process. With features like phaselockedloops for clocking and a dedicated double data rate (DDR) interface to meet DDR SDRAM and fast cycle RAM (FCRAM) memory requirements, Cyclone devices are a cost-effective solution for data-path applications. These devices support various I/O standards, including LVDS at data rates up to 640 megabits per second (Mbps), and 66- and 33-MHz, 64- and 32-bit peripheral component interconnect (PCI), for interfacing with and supporting ASSP and ASIC devices.

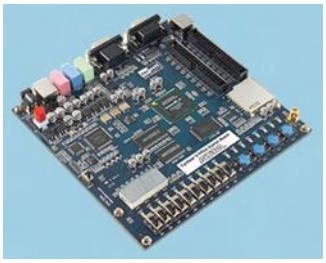
Video Development Kit - Cyclone II Edition

New

This video development kit delivers a complete development environment for digital video and image processing using Cyclone II FPGAs and Texas Instruments TVP5146 family of video analog-to-digital (A/D) converters. The kit assists the entire design process from design conception through hardware implementation.



Kit Includes:

- Cyclone II EP2C70 DSP development board
- Cyclone II EP2C70F672C6 device
- Video input daughtercard
- MATLAB/Simulink evaluation software
- DSP Builder development tool
- Quartus II development kit edition (DKE)
- Evaluation IP cores
- USB-Blaster™ download cable
- Power supply and international power cords
- System reference designs and labs

Cyclone II FPGA Starter Development Kit

New

This kit provides the user with an integrated control environment that includes a software controller, USB command controller, multi-port SRAM/SDRAM/flash memory controller and demonstration circuitry specified in Verilog code. These features enable users to implement and test designs without the need to use complex APIs, host control software or SRAM/SDRAM/flash memory controllers.

Kit Includes:

- Cyclone II FPGA Starter Development board
- Altera Development Suite Tools CD-ROMs
- Cables and power supply
- six rubber (silicon) covers for the development board stands and extender pins
- Clear plastic cover for the board

Nios® II Evaluation Kit

Cyclone II Edition

New

The Nios®II Development Kit, Cyclone® II Edition provides everything needed for system-on-a-programmable-chip (SOPC) development. Based on the Nios II family of embedded processors and the low-cost Cyclone II EP2C35 device, this development kit provides an ideal environment for developing and prototyping a wide range of price-sensitive embedded applications.

Kit Includes:

- Nios development board
- USB-Blaster™ download cable
- Ethernet cable
- Ethernet cross-over adapter
- Ethernet PHY daughter board
- LCD module
- 9-pin RS-232 serial cable
- DC power supply
- Three regional power cables

PCI Development Kit

Cyclone II Edition

New

This PCI Development Kit, Cyclone™ II Edition is a complete PCI and PCI-X prototyping and testing kit, based on the Cyclone II device. PCI transactions between the board and the host PC can be performed, as well as configuring the board with either the factory-programmed or user-programmable design.

Kit Includes:

- Cyclone II EP2C35 PCI development board
- PCI Development Kit, Cyclone II Edition CD-ROM
- Quartus® II Software Development Kit Edition
- Jungo WinDriver Development Toolkit
- PLD Applications PCI-X CORE CD-ROM
- MegaCore® IP Library CD-ROM
- USB-Blaster™ download cable and USB cable
- Power supply and adapter cables

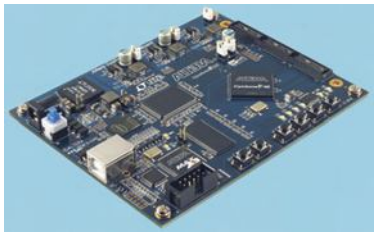
Farnell

Cyclone II FPGA Family



Cyclone® II FPGAs can be used alone or as DSP co-processors to improve price-to-performance ratios for DSP applications. They support the Nios II embedded processor which allows implementation of custom-fit embedded processing solutions. They can also expand the peripheral set, memory, I/O, or performance of embedded processors. New and advanced features include, embedded multipliers, external memory interface support for DDR2 and QDRII memory devices, on-chip series termination, and support for more differential and single-ended I/O standards.

Cyclone III FPGA Starter Kit

The Cyclone® III FPGA Starter Kit is easy to use, and an ideal introduction for users who have never designed with FPGAs before. For experienced FPGA designers checking out the Cyclone III architecture, systems can leverage 60 percent (on average) faster performance and 50 percent lower power that Cyclone FPGAs offer over the competition. Several design examples included in the kit make for a quick "out-of-the-box" evaluation experience.

Contents:
- Cyclone III Starter Board
- Cyclone III FPGA Starter Kit CD-ROM
- Download instructions to receive the latest software

Cyclone III FPGA Development Kit

New

This development kit combines a Cyclone III® FPGA with a robust set of memories and user interfaces. The kit provides an integrated control environment that includes a USB command controller, a multi-port SRAM/DDR SDRAM/flash memory controller, Ethernet, an on-board current meter, and an example design with demonstration circuitry specified in Verilog code to help you get started quickly with your own designs.

Kit Includes:
- Cyclone III development board
- Cyclone III EP3C120F780 FPGA
- Power cord with plug adapters (US, UK, EU)
- Two HSMC connectors
- One USB type B connector
- Three HSMC debug cards
- Complete Design Suite DVD
- Development Kit, CD-ROM

DSP Development Kit

Cyclone III Edition

New

The DSP Development Kit, Cyclone III Edition delivers a complete digital signal processing (DSP) development environment for design engineers. The kit facilitates the entire design process from design conception through hardware implementation.

Kit Includes:
- Cyclone III development board
- Data Conversion HSMC
- DSP Builder development tool
- Quartus® II development software
- MATLAB/Simulink evaluation software
- Evaluation intellectual property (IP) cores
- power supply and cables

Nios® II Embedded Evaluation Kit

Cyclone III Edition

New

The Nios® II Embedded, Cyclone III Edition Evaluation Kit includes a full-featured FPGA development board, LCD Multimedia Daughtercard, hardware and software development tools, documentation and accessories needed to begin embedded and system on a programmable chip designs using FPGAs.

Kit Includes:
- Nios II Embedded Evaluation Board
- Nios II Embedded Evaluation Kit CD-ROM
- Altera Complete Design Suite DVD
- SD-Card Reader (USB 2.0)
- SD-Card Flash
- USB Cable
- DC power supply

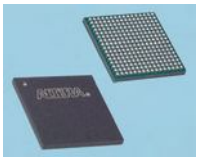
Blaster Download Cables



The ByteBlaster™ II and the USB-Blaster™ download cables allow you to program and configure Altera® devices. The cables drive configuration data from your PC to the device on the PCB, meaning design changes can be downloaded directly to the device. This makes for easier prototyping and also allows you to carry out multiple design iterations in quick succession.

Cyclone III FPGA Family

The Cyclone® III FPGA family delivers a combination of low power, high functionality, and low cost. Video and image processing, displays, and wireless are just a few of the many application areas where these FPGAs can be used. All Cyclone III devices support vertical migration within the same package. This allows designers to optimize density and cost as the design evolves.

DSP Development Kit - Stratix II Professional Edition

This development kit delivers a complete digital signal processing (DSP) development environment for Stratix II devices with the added benefit of being RoHS compliant. The kit assists the entire design process from design conception through hardware implementation.

Kit Includes:

- Stratix II development board
- Stratix II EP2S180F1020C3 device
- DSP Builder development tool
- Quartus® II development software
- MATLAB/Simulink evaluation software
- Evaluation intellectual property (IP) cores

Nios II Development Kit - Stratix II Edition

This development kit provides a complete development environment for hardware and software designers working on system-level designs. The kit is based on the Nios II family of embedded processors and the Stratix II EP2S60 device and is ideal for designing and prototyping a wide range of embedded applications.

Kit Includes:
- Nios development board
- USB-Blaster™ download cable
- Ethernet cable
- Ethernet cross-over adapter
- Ethernet PHY daughter board
- LCD module
- 9-pin RS-232 serial cable
- DC power supply
- Three regional power cables

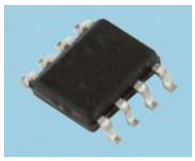
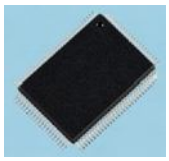
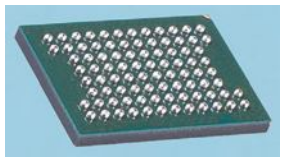
Stratix, Stratix II & Stratix GX / GXII



Stratix devices are optimized for DSP applications that enable efficient implementation of high-performance filters and multipliers. They support various I/O standards and also offer a complete clock management solution with its hierarchical clock structure.
The Stratix GX device family is a powerful fusion of 3.125-Gbps transceiver technology with the award winning Stratix FPGA architecture.





Stratix II FPGAs are based on the same feature set as Stratix devices, with many key enhancements. Stratix II devices have a new and innovative logic structure that offers higher performance and higher density at a lower cost than comparable FPGAs.
These devices provide a strong solution for the growing number of applications and protocols requiring multi-gigabit serial I/O. These transceivers provide robust noise immunity and excellent jitter performance across an operating range of 600 Mbps to 6.375 Gbps, while maintaining low power consumption.

Serial Configurable CPLD Memory

These flash memory devices serially configure Stratix® III, Stratix II GX, and Stratix II FPGAs, Arria™ GXFPGAs, and the Cyclone® series FPGAs using the active serial (AS) configuration scheme.

Features:
- Low cost, low-pin count, and non-volatile memory
- Low current during configuration and near-zero standby mode current
- Enables the Nios® processor to access unused flash memory through AS memory interface
- Re-programmable memory with more than 100,000 erase/program cycles
- Write protection support for memory sectors using status register bits
- In-system programming support with SRunner software driver
- In-system programming support with USB Blaster™, EthernetBlaster™, or ByteBlaster™ II download cables

FPT-1 CPLD/FPGA Experimental Kit Logic Circuit Design

LEAP ELECTRONIC CO.,LTD.

A circuit board which can be used for different purposes with the minimum amount of effort and expense. Instead of the constant design and manufacturing of small circuits using a number of logical devices on a bread board, this kit is programmable so the operation can be changed using only sofware alterations. The board is interfaced with the PC via the printer port and is ideal for experimenting with different ciruit designs.

Features:

- Uses CPLD/FPGA software and hardware in logical IC design, in order to replace complicated TTL/CMOS design
- Saves time and money by reuse of same circuit, ammended and operated using software with no physical changes needed
- Uses graphics and VHDL, ABEL, ADHL to develop circuits
- Programs finished file to EPROM (FLASH) to be operated independantly
- Interface to PC via printer port for downloading
- Operated with DOS and Windows 9X/ME/2000/NT
- A choice of two chip board modules can be used

Hardware Specifications:

- Support Devices -
  (1) ALTERA EPF10K10TC144 (TQFP144pin)
  (2) XILINX XCS10TQ144 (TQFP144pin)
- 8 x 2 LED output
- 8 x 2 Logical input toggle
- Four pulse keystrokes produced (two positive pules, two negative pulses)
- Six digit and seven node display
- 10MHz Oscillator
- 25-pin D type connector (Printer port download FPGA)
- Supports ALTERA MAX +Plus II Baseline and XILINX Foundations development system

CoolRunner-II CPLD Starter Kit

XILINX

New

The CoolRunner-II Starter Kit contains everything designers need to evaluate CoolRunner-II CPLDs. The Kit's evaluation board has a high-speed USB interface for power and programming, several features for easy prototyping, expansion slots, and an optional SPI ROM pad for memory interfacing. The kit also includes a 16x2 LCD display, USB cable, and reference designs for easy evaluation.

Features:

- Complete "Out-of-the-Box" evaluation platform
- CoolRunner-II Utility Window
- Easy set-up and monitoring
- DataGATE evaluation "switch"
- Free reference designs

CoolRunner™-II CPLDs

XILINX

SMD New

CoolRunner-II CPLDs deliver the high speed and ease of use associated with the XC9500/XL/XV CPLD family with the extremely low power versatility of the XPLA3 family in a single CPLD. This means that the exact same parts can be used for high-speed data communications/computing systems and leading edge portable products, with the added benefit of In System Programming. Low power consumption and high-speed operation are combined into a single family that is easy to use and cost effective. Clocking techniques and other power saving features extend the users' power budget.

XC9500 ISP Programmable CPLDs

XILINX

The XC9500 CPLD family provides advanced in-system programming and test capabilities for high performance, general purpose logic integration. All devices are in-system programmable for a minimum of 10,000 program/erase cycles. Extensive IEEE 1149.1 (JTAG) boundary-scan support is also included on all family members.

- High-performance, Fmax to 125MHz (5V devices) and 200MHz (XL - 3.3V devices)
- In-system programmable via JTAG Interface
- Endurance of 10,000 program/erase cycles with 20 year data retention
- Program/erase over full commercial voltage and temperature range
- Enhanced pin-locking architecture
- Global and product term clocks, output enables, set and reset signals
- Extensive IEEE Std 1149.1 boundary-scan (JTAG) support
- Programmable power reduction mode in each macrocell
- Individual output enable per output pin with local inversion
- Slew rate control on individual outputs
- User programmable ground pin capability
- Extended pattern security features for design protection
- High-drive 24 mA outputs
- 3.3 V or 5 V I/O capability
- Excellent quality and reliability

Platform Cable USB II

The Platform Cable USB II combines in-circuit configuration and programming of all Xilinx devices with its own integrated firmware which is held in a small form factor pod attached to the cable.
It is certified by the USB Implementors Forum (USB-IF), has industry-leading performance and is compatible with Full Speed (USB 1.1) and Hi-Speed (USB 2.0) ports. This product is an upgrade to and backwards compatible with Platform Cable USB and will address the new generation of PCs that have eliminated legacy IEEE 1284 parallel ports.

Features:
- Encapsulated innovative FPGA-based acceleration firmware
- True plug-and-play
- Bus-powered USB device (no power supply required)
- Automatically senses and adapts to target I/O voltage
- Firmware downloadable over cable
- Target power status LED
- CE and FCC compliant
- Compatible with target voltages in the range of +1.5 VDC to +5 VDC
- iMPACT and ChipScope™ tool support in ISE® software v6.3.03i (Windows only)
- Compatible with Windows and Linux operating systems
- Supports Boundary Scan and Slave-Serial configuration modes
- Backwards compatibility

XC1700 / XCF04S & XCF32P Configuration PROMs

an easy-to use, cost-effective, and reprogrammable method for storing large Xilinx FPGA configuration bitstreams.

XCF32P Features:
- 1.8V Supply Voltage
- Serial or Parallel FPGA Configuration Interface (up to 33 MHz)
- Design Revision Technology Enables Storing and Accessing Multiple Design Revisions for Configuration
- Built-In Data Decompressor Compatible with Xilinx Advanced Compression Technology

XCF04S Features:
- 3.3V Supply Voltage
- Serial FPGA Configuration Interface (up to 33 MHz)

The **XC1700** family of serial configuration PROMs (SCPs) provides an easy-to-use, cost-effective method for storing Xilinx FPGA configuration bit-streams. The **XCF04S** & **XCF32P** PROMs provide

XC1700 Features:
- On-chip address counter incremented by each rising edge on the clock input
- Simple interface to the FPGA requires only one user I/O pin
- Cascadable for storing longer or multiple bit-streams
- Programmable reset polarity (active High or active Low) for compatibility with different FPGA solutions
- Low-power CMOS EPROM process
- Available in 5V and 3.3V (XL) versions
- Available in 8-pin DIL plastic packages, and commercial and industrial temperature ranges
- Programming support by leading programmer manufacturers
- XC1736 = 36288 configuration bits
- XC1765 = 65536 configuration bits
- XC17S30XL = 249168 configuration bits
- XC17S40XL = 330696 configuration bits

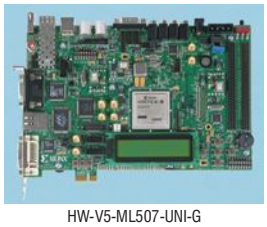
Embedded Development HW/SW Kit

Virtex-5 FX70T PowerPC & MicroBlaze Processor Edition



The Virtex®-5 FX70T development kit enables high performance embedded design in Xilinx FPGAs.
This integrated kit supplies an ML507 development board, Platform Studio embedded tool suite and ISE® design software, supporting both the PowerPC® 440 hard and MicroBlaze™ soft processors.

Features Include:
- Xilinx Device: XC5VFX70TFFG1136
- Flexible Virtex-5 FXT ML507 Development Board
- Award Winning Platform Studio embedded tool suite
- Complete ISE Foundation™ FPGA design software
- Powerful reference designs accelerate your development
- Communications cables and comprehensive documentation

Virtex-5 Development/Evaluation Systems

HW-V5-ML507-UNI-G

The **ML507** is a general purpose FPGA, RocketIO™ GTX , and Embedded System development board that provides feature-rich general purpose evaluation and development platform.
It includes on-board memory and industry standard connectivity interfaces and delivers a versatile development platform for embedded applications.
ML501 is a feature-rich and low-cost evaluation/development platform which provides easy and practical access to resources available in the on-board Virtex®-5 LX50 FPGA device. Supported by industry standard interfaces and connectors, ML501 is a versatile development platform for multiple applications.
The **ML555** for PCI-Express® supports PCIe®/PCI-X™/PCI™. This complete development kit passed PCI-SIG compliance for PCI Express v1.1 and enables you to rapidly create and evaluate designs using PCI Express, PCI-X and PCI interfaces.

Virtex®-4 Multi-Platform FPGAs

XILINX®

SMD New

Tthe Virtex-4 Family from Xilinx greatly enhances programmable logic design capabilities, making it a powerful alternative to ASIC technology.
The basic Virtex-4 building blocks are enhancements of those found in the popular Virtex, Virtex-E, Virtex-II, Virtex-II Pro, and Virtex-II Pro X product families,so previous-generation designs are upward compatible.

● **Virtex®-4 FX** - Optimised for Embedded Processing & Serial Connectivity (1.2 Volt)

XtremeDSP Starter Platform
Spartan-3A DSP 1800A Edition

XILINX®

New

Evaluate DSP applications using the versatile XtremeDSP™ Starter Platform powered by the Spartan®-3A DSP 1800A FPGA.
This evaluation platform delivers instant access to Spartan-3A DSP family capabilities and supports industry-standard peripherals, connectors, and interfaces. It is designed for use with the Xilinx System Generator for DSP and ISE® design tools.

XILINX®

New

HW-SPAR3AN-SK-UNI-G

HW-SPAR3A-SK-UNI-G

HW-SPAR3E-SK-UK-G

The Spartan®-3AN Starter Kit provides out-of-the-box functionality to quickly evaluate device features and implement designs. This kit includes an evaluation board with 10/100 Ethernet PHY, 64 Mbytes of DDR2 SDRAM, 4 Mbit Platform Flash, two 16Mbit SPI serial Flash, ADC and DAC circuitry, a 2x16 LCD display, connectors supporting high-speed I/O standards, and more.
The Spartan®-3A Starter Kit delivers instant access to Spartan-3A FPGA device features such as SUSPEND power-saving mode, high-speed I/O options, DDR2 SDRAM memory interface, commodity flash configuration support, and FPGA/IP protection using Device DNA Security.
The Spartan®-3E FPGA Starter Kit is a complete development board solution giving designers instant access to the capabilities of the Spartan-3E family. Complete kit includes board, power supply, evaluation software, resource CD (application notes, white papers, data sheets, etc.), and USB cable.

Spartan-3 Generation FPGAs

The Spartan-3 generation of FPGAs includes the popular, high-volume Spartan-3, Spartan- 3E, Spartan-3A, Spartan-3AN, and Spartan-3A DSP platforms. These families of Field Programmable Gate Arrays (FPGAs) are specifically designed to meet the needs of high volume, cost-sensitive electronic applications, such as consumer products. The Spartan-3 generation offer densities ranging from 50,000 to 5 million system gates.

Spartan-XL FPGAs

The Spartan-XL families are a high-volume production FPGA solution that delivers all the key requirements for ASIC replacement up to 40,000 gates. These requirements include high performance, on-chip RAM, core solutions and prices that, in high volume, approach and in many cases are equivalent to mask programmed ASIC devices. The Spartan series is the result of years of FPGA design experience and feedback from thousands of customers. By streamlining the Spartan series feature set, leveraging advanced process technologies and focusing on total cost management, the Spartan series delivers the key features required by ASIC and other high-volume logic users while avoiding the initial cost, long development cycles and inherent risk of conventional ASICs.

- First ASIC replacement FPGA for high-volume production with on-chip RAM
- Streamlined feature set based on XC4000 architecture
- System performance beyond 80 MHz
- Unlimited reprogrammability
- Low cost
- On-chip SelectRAM™ memory
- Fully PCI compliant
- Full readback capability for program verification and internal node observability
- Dedicated high-speed carry logic
- Internal 3-state bus capability
- Eight global low-skew clock or signal networks
- IEEE 1149.1-compatible Boundary Scan logic
- 3.3V supply for low power with 5V tolerant I/Os (XL only)
- 12 mA or 24 mA output drive (XL only)

ECP2/M FPGA Family

The LatticeECP2/M family of FPGA devices is optimized to deliver high performance features such as advanced DSP blocks, high speed SERDES (ECP2M family only) and high speed source synchronous interfaces in an economical FPGA fabric.
These devices include LUT-based logic, distributed and embedded memory, Phase Locked Loops (PLLs), Delay Locked Loops (DLLs), pre-engineered source synchronous I/O support, enhanced sysDSP blocks and advanced configuration support, including dual boot capabilities. Every device in the family has a JTAG port. This family also provides an on-chip oscillator and soft error detect capability.

The LatticeECP2M device family features high speed SERDES with PCS. These high jitter tolerance and low transmissionjitter SERDES with PCS blocks can be configured to support an array of popular data protocols includingPCI Express, Ethernet (1GbE and SGMII), OBSAI and CPRI. Transmit Pre-emphasis and Receive Equalization settings make SERDES suitable for chip to chip and small form factor backplane applications.

Features:
- High Logic Density for System Integration
- 6K to 95K LUTs
- 90 to 583 I/Os
- Embedded SERDES (LatticeECP2M Only)
- Data Rates 250 Mbps to 3.125 Gbps
- Up to 16 channels per device
- PCI Express, Ethernet (1GbE, SGMII), OBSAI, CPRI and Serial RapidIO
- sysDSP™ Block
- 3 to 42 blocks for high performance multiply and accumulate
- Each block supports: One 36x36, four 18X18 or eight 9X9 multipliers
- Flexible Memory Resources

55Kbits to 5308Kbits sysMEM™ Embedded Block RAM (EBR)
- 18Kbit block
- Single, pseudo dual and true dual port
- Byte Enable Mode support

12K to 202Kbits distributed RAM
- Single port and pseudo dual port
- sysCLOCK Analog PLLs and DLLs

Two GPLLs and up to six SPLLs per device
- Clock multiply, divide, phase & delay adjust
- Dynamic PLL adjustment

Two general purpose DLLs per device
- Pre-Engineered Source Synchronous I/O
- DDR registers in I/O cells
- Dedicated gearing logic

Source synchronous standards support
- SPI4.2, SFI4 (DDR Mode), XGMII
- High Speed ADC/DAC devices

Dedicated DDR and DDR2 memory support
-DDR1: 400 (200MHz) / DDR2: 533 (266MHz)

Dedicated DQS support
- Programmable sysI/O™ Buffer Supports Wide Range Of Interfaces
- Flexible Device Configuration
- 1149.1 Boundary Scan compliant
- Dedicated bank for configuration I/Os
- SPI boot flash interface
- Dual boot images supported
- TransFR™ I/O for simple field updates
- Soft Error Detect macro embedded
- System Level Support
- ispTRACY™ internal logic analyzer capability
- On-chip oscillator for initialization & general use
- 1.2V power supply

RL Re-reeling available

LatticeEC Advanced Evaluation Board

The LatticeEC Advanced Evaluation Board provides a platform to evaluate, test, and debug designs with the support of LatticeEC advanced interface capabilities. The board provides easy access to PCI, DDR SDRAM, FCDRAM and SPI4.2 interfaces. It features a LatticeEC FPGA with a 1.2V DC core and can accommodate all pin compatible LatticeEC devices in the 672-ball fpBGA (1mm pitch) package.

Features:

- Required voltages supplied by PCI or one external 5V DC supply
- ispVM® System programming support
- SPI3 Flash device included for non-volatile configuration storage
- ispDOWNLOAD® cable included
- 5V AC adapter included
- PCI edge connector (120-pin) for 32-bit PCI interface
- SODIMM socket supporting 16-bit, 200MHz 200-pin DDR SDRAM
- Onboard FCRAM
- SPI4.2 interface via VHDM connectors
- Prototyping area with access to over 150 I/O pins
- SMA connectors included (10) for high-speed clock and data interfacing

LatticeXP2 Standard Evaluation Board

The LatticeXP2 Standard Evaluation Board is a flexible platform designed to help the user quickly evaluate the features and performance of the LatticeXP2 FPGA, or aid in development of custom designs. Common uses for this evaluation board include: A Single Board Computer system. An analog-to-digital, and digital-to-analog mixed signal source/sink. A platform for evaluating the I/O characteristics of the FPGA.

Features:
- LatticeXP2 FPGA (LFXP2-17E-4F484C)
- Single printed circuit board solution
- Eight LEDs for visual feedback
- Seven-segment LED
- Eight-position switch input
- General purpose push buttons
- SRAM memory
- Compact Flash connector
- RS232 DB9 Female connector
- LCD connector with backlight/contrast controls
- IEEE 1149.1 JTAG programming/boundary-scan interface
- Built-in USB download for use with ispVM® software
- Power supply manager for testing supply sequencing
- Selectable voltage for bank 6 I/O
- Replaceable oscillator for reference clocks
- SMA connectors to LatticeXP2 clock input/general purpose I/O pins
- 100mil center-center test point grid

MachXO™ Standard Evaluation Board

The MachXO Standard Evaluation board provides a convenient platform to evaluate electrical characteristics of the MachXO device, and to evaluate, test and de-bug custom logic designs. The board includes selectable power for mixed core I/O voltage operation. A 33MHz oscillator, as well as an ispClock™ PLL synthesis device are also included on the board.

Features:
- MachXO 256-fpBGA
- Single printed circuit board solution
- Eight LEDs for visual feedback
- 8-bit input switch
- General purpose push-button
- 1149.1 JTAG programming/boundary-scan interface
- Built-in power supply operating with an DC input between 5V and 20V
- Selectable CORE voltage for the MachXO
- Selectable voltages for a portion of the I/O banks
- Built-in adjustable oscillator for reference clocking source
- Lattice ispClock5610 multiple output PLL
- SMA connector landing pads (not populated) - MachXO clock input/GPIO pins
- RJ-45 connector (not populated)
- LCD/GPIO footprint
- 100mil center-center test point grid
- Impedance controlled Mictor (not populated)

MachXO USB Starter Kit

The MachXO Starter Kit is a simple, yet versatile solution allowing for detailed analysis of the MachXO performance and technology. The board is also a convenient platform to help the user get started with their own MachXO design. Lattice's ispLEVER development tools included in the MachXO Starter Kit offer a comprehensive design environment for the MachXO architecture.

Features:
- MachXO device LCMXO640C-3TN144C
- Built in USB download capability with USB controller and MachXO256 device
- Power supply and JTAG via USB
- 24 Mhz oscillator
- Power LED and 8 status LEDs
- 4-DIP switch and push button reset

MachXO 256 Starter Evaluation Board

The Lattice MachXO Starter Evaluation Board provides a convenient platform to evaluate, test and debug user designs. The board features a Lattice MachXO256 cross-over programmable logic device in a 100-pin TQFP package, power input jacks, a 33MHz clock oscillator and I/O connections. The Lattice MachXO I/Os are connected to a rich variety of interfaces, including switches (momentary and ON/OFF), LEDs, 0.10" headers and PCB test points.

Features:
- Lattice MachXO device
- Prototyping area
- Access to 81 user I/Os
- Independent voltage control for core and I/O
- 33MHz on-board oscillator
- Status LEDs and Input switches
- Pads for optional board expansion
- AC adapter
- Lattice ispDOWNLOAD® cable, to download programming files to the MachXO device

MachXO Crossover PLDs

The MachXO family of crossover programmable logic devices (PLDs) combines CPLD and FPGA attributes together to optimally serve applications such as bus bridging, bus interface and control that traditionally were implemented in CPLDs or low capacity FPGAs. MachXO includes PLLs and embedded memory along with features expected in CPLDs. The devices use look-up tables (LUTs) and embedded block memories traditionally associated with FPGAs for flexible and efficient logic implementation. Through non-volatile technology, the devices provide the single-chip, highsecurity, instant-on capabilities traditionally associated with CPLDs. Finally, advanced process technology and careful design will provide the high pin-to-pin performance also associated with CPLDs.

Features:
- Non-volatile, Infinitely Reconfigurable
  - Instant-on - powers up in microseconds
  - Single chip, no external configuration memory required
  - Excellent design security, no bit stream to intercept
  - Reconfigure SRAM based logic in milliseconds
  - SRAM and non-volatile memory programmable through JTAG port
  - Supports background programming of non-volatile memory
- Sleep Mode
  - Allows up to 100x static current reduction
- TransFR™ Reconfiguration (TFR)
  - In-field logic update while system operates
- High I/O to Logic Density
  - 256 to 2280 LUT4s
  - 73 to 271 I/Os with extensive package options
  - Density migration supported
  - Lead free/RoHS compliant packaging
- Embedded and Distributed Memory
  - Up to 27.6 Kbits sysMEM™ Embedded Block RAM
  - Up to 7.5 Kbits distributed RAM
  - Dedicated FIFO control logic
- Flexible I/O Buffer
  - Programmable sysIO™ buffer supports wide range of interface
- sysCLOCK™ PLLs
  - Up to two analog PLLs per device
  - Clock multiply, divide, and phase shifting
- System Level Support
  - IEEE Standard 1149.1 Boundary Scan
  - Onboard oscillator
  - IEEE 1532 compliant in-system programming

ispMACH 4000V/B

The high performance ispMACH 4000 family offers a SuperFAST CPLD solution. The ispMACH 4000 family includes 3.3, 2.5 volt power supply versions, designated the ispMACH 4000V and ispMACH 4000B devices, respectively. The ispMACH 4000 devices couple industry leading speed performance with the lowest dynamic power consumption available while supporting I/O standards between 3.3 and 2.5 volts.The ispMACH 4000 family offers densities ranging from 32 to 256 macrocells. There are multiple density-I/O combinations in Thin Quad Flat Pack (TQFP) packages ranging from 44 to 100 pins.The devices offer ease of design by enhanced macrocells with individual clock, reset, preset and clock enable controls, wide input gating for fast counters, state machines and address decoders. System integration is aided by hot-socketing, open drain capability, input pull-up, pull-down or bus-keeper, 3.3V PCI compatibility, IEEE 1149.1 boundary scan testability, In-System Programmability using IEEE 1532 interface.

MACH - Macro Array CMOS High-Density

The MACH® 4 family from Lattice offers an exceptionally flexible architecture and delivers a superior CPLD solution of easy-to-use silicon products and software tools. The overall benefits for users are a guaranteed and predictable CPLD solution, faster time-to-market, greater flexibility and lower cost.

ispLEVER Base Version for Windows

ispLEVER is the complete design environment for the latest Lattice programmable logic products. It includes a comprehensive set of powerful tools for all design tasks, including project management, IP integration, design planning, place and route, in-system logic analysis, and more. The software is provided on CD-ROM and DVD for Windows and includes a USB Download Cable.

Device Support:
- All the latest Lattice programmable logic families

Platform Support:
- Windows: 2000 / XP

Includes:
- One year of software maintenance updates
- USB Cable

For Programming Lattice ISP Devices

Lattice ispDOWNLOAD cables are designed to facilitate in-system programming for all Lattice Semiconductor ISP™ devices with 1.2V, 1.8V, 2.5V, 3.3V, 5.0V core voltages, directly from a PC. This cable connects to the PC Parallel port, and uses fly-wire connectors to the target system board for maximum flexibility. Included are adapters for easy interface to widely used 1x8 and 2x5 header configurations.

ispPAC-POWR Power Management Devices

The LA-ispPAC-POWR1014/A and ispPAC-POWR1014/A Power Manager II are general-purpose power-supply monitors and sequence controllers, incorporating both in-system programmable logic and in-system programmable analog functions implemented in non-volatile E2CMOS® technology. These devices provides 10 independent analog input channels to monitor up to 10 power supply test points. Each of these input channels has two independently programmable comparators to support both high/low and in-bounds/out-of-bounds (window-compare) monitor functions. Four general-purpose digital inputs are also provided for miscellaneous control functions.

Features:
- ● Monitor and Control Multiple Power Supplies
- - Simultaneously monitors up to 10 power supplies
- - Provides up to 14 output control signals
- - Programmable digital and analog circuitry
- ● Embedded PLD for Sequence Control
- - 24-macrocell CPLD implements both state machines and combinatorial logic functions
- ● Embedded Programmable Timers
- - Four independent timers
- - 32µs to 2 second intervals for timing sequences
- ● Analog Input Monitoring
- - 10 independent analog monitor inputs
- - 2 programmable threshold comparators per analog input
- - Hardware window comparison
- ● High-Voltage FET Drivers
- - Power supply ramp up/down control
- - Programmable current and voltage output
- - Independently configurable for FET control or digital output

Lattice ispPAC-POWR Devices and Evaluation Board

The Lattice ispPAC - POWR604 and ispPAC-POWR1208 incorporate both in-system programmable logic and in-system programmable analogue circuits to perform special functions for power supply sequencing and monitoring.

Features:
- ● Monitor and Control Multiple Power Supplies
- ● Embedded PLD for Sequence Control
- ● Embedded Programmable Timers
- ● Analogue Comparators for Monitoring
- ● Embedded Oscillator
- ● Programmable Output Configurations
- ● 2.25V to 5.5V supply range
- ● Easy-to-use Windows compatible software for logic and sequence design

PAC - POWR1208-EV Evaluation Board

The PAC-POWR1208-EV evaluation board allows the designer to quickly configure and evaluate the ispPAC-POWR1208 on a fully assembled printed circuit board.

Features:
- ● Double sided board
- ● supports 44-pin TQFP package
- ● Header for user I/O
- ● JTAG programming cable connector
- ● Pad array for user prototyping

ispClock 5620A Development Kit

The ispClock 5620 Development Kit includes everything the designer needs to quickly configure and evaluate the ispClock5620A on a fully assembled printed-circuit board. The four-layer board supports a 100-pin TQFP package, a header for user I/O and a JTAG programming cable connector. SMA connectors are installed to provide high-signal integrity access to selected high-speed I/O signals.

Includes:
- ● ispClock5620A Evaluation Board
- ● ispDOWNLOAD Cable
- ● AC Adapter
- ● User Documentation

ispClock™ Family

The ispClock5610A and ispClock5620A are in-system-programmable high-fanout enhanced zero delay clock generators designed for use in high performance communications and computing applications.
The **ispClock5610A** provides up to 10 single-ended or five differential clock outputs.
The **ispClock5620A** provides up to 20 single-ended or 10 differential clock outputs.

Features:
- ● 8MHz to 400MHz Input/Output Operation
- ● Low Output to Output Skew
- ● Low Jitter Peak-to-Peak
- ● Up to 20 Programmable Fan-out Buffers
- ● Fully Integrated High-Performance PLL
- ● Precision Programmable Phase Adjustment (Skew) Per Output
- ● Up to Five Clock Frequency Domains
- ● Flexible Clock Reference and External Feedback Inputs
- ● All Inputs and Outputs are Hot Socket Compliant
- ● Four User-programmable Profiles Stored in E2CMOS® Memory
- ● Full JTAG Boundary Scan Test In-SystemProgramming Support
- ● Exceptional Power Supply Noise Immunity

Programmable Logic Devices - continued

EB481 - PLC Builder

matrix multimedia

New

This bundle includes everything that is needed to rapidly develop a fully working Programmable Logic Controller system. All circuit diagrams for the boards are supplied which allows for development of a circuit board once a system has been prototyped.
Flowcode 3 facilitates extremely rapid development of your system, and the combination of Flowcode and the ECIO means that users can develop systems that are fully USB reprogrammable in the field.

Kit Includes:

- E-Blocks LED board
- E-Block LCD board
- E-Blocks Switch board
- E-Blocks Relay board
- Opto-isolator board
- E-Block ECIO Application board
- ECIO 40 pin USB programmable device
- International power supply
- USB lead
- Professional version of Flowcode 3

First-In, First-Out (FIFO)

FIFOs

FIFOs provide temporary storage of data in sequence so that the first word to the input port will be the first at the output port. The ports work independently and the data can be read and written at different rates.
FIFOs have memory locations which inhibit further data input if full and can only send stored data out.
The time to complete an operation is called the Access time which can determine the system speed in which the device is operating.

Non-Volatile RAM & Memory Modules

Non-Volatile CMOS RAMs with Battery Back-up

The ZEROPOWER NVRAM is a non-volatile RAM with internal lithium battery, directly replacing industry standard SRAMs.

Features:

- Power-fail control circuit
- Unlimited write cycles
- 10 years of data retention in power absence
- Pin and function compatible with standard SRAMs
- Automatic power-fail chip deselect and write protect

Non-Volatile CMOS RAMs with Battery Back-Up

MAXIM

Non-Volatile CMOS RAMs with battery back-up giving data retention of over 10 years during the absence of power. The automatic write protection prevents data corruption during power fluctuations.

Directly replaces Static RAM, EPROM or EEPROM.

Non-Volatile RAM & Memory Modules - continued

Non-Volatile RAMs

Each GR Series non-volatile RAM is a pin compatible drop-in replacement for a normal static RAM device. Data is protected by an automatic write inhibit function during power loss. The power down circuit is referenced at 4.5V. At this point the device is write protected and the memory contents are retained by the lithium power source. The rapid power down of 10µs and low standby power ensure no special considerations are required when using these devices. Data can be retained for up to 10 years.

The 'H' suffix indicates an extended temperature range of -40°C to +85°C.

Mémoire RAM statique Non-Volatile

These devices are fast Static Random Access Memory (SRAM) with a non-volatile element in each memory cell. The embedded non-volatile elements incorporate QuantumTrap™ technology producing the world's most reliable non-volatile memory.
The SRAM provides infinite read and write cycles, while independent, nonvolatile data resides in the non-volatile elements. Data transfers from the SRAM to the non-volatile elements takes place automatically at power down. On power up, data is restored to the SRAM from the non-volatile memory.

FRAM

Ferroelectric RAM (FRAM) is a RAM based device that uses the ferroelectric effect for a storage mechanism. This is a completely different mechanism than the one used by other non-volatile memories, which use floating gate technology. The ferroelectric effect is the ability of a material to store an electric polarisation in the absence of an applied electric field. The advantage of using this technology is that devices can be produced as pin-for-pin replacements for current memory devices but with the following new features:

- Number of write cycles increased from 100,000 to 10,000,000,000 (10 billion)
- Write speed is the same as read speed (NoDelay™)
- Higher noise immunity as the data does not have to remain stable for the usual 10 milli-seconds write period.
- New PCB design is not necessary as the new parts are 'drop in' replacements.
- Can be used as RAM with the added advantage of being non-volatile (NV-RAM), battery back-up not being required.

Non-Volatile Static MRAM

The 1M & 4M bit magnetoresistive random access memory (MRAM) devices are organized as 65,536 & 262,144 words of 16 bits respectively. They are equipped with chip enable (E), write enable (W), and output enable (G) pins, allowing for significant system design flexibility without bus contention. Because of the separate byte-enable controls (LB and UB), individual bytes can be written and read. MRAM is a nonvolatile memory technology that protects data in the event of power loss and does not require periodic refreshing. Full nonvolatile operation with 20 years minimum data retention is possible. These devices are an ideal memory solution for applications that must permanently store and retrieve critical data quickly. The IC's requires a single 3.3V power supply.

Dynamic RAMs

SDRAM

Micron has four generations of Single Data Rate (SDR) Synchronous DRAMs (SDRAMs) in full production. The SDRAM family consists of 64 Megabit (64Mb), 128Mb, 256Mb, and 512Mb devices. These devices are configured as quad-bank devices.Micron® SDRAM includes 64ms refresh and Self Refresh and operate with a fully synchronous interface at 3.3V.

FRAMs

FUJITSU

- The memory cells used for the MB85R256 and MB85R100x significantly outperform FLASH memory and EEPROM in durability.
- The MB85R100x uses a pseudo-SRAM interface that is compatible with conventional asynchronous SRAM.

UNI/O EEPROM

1-Wire Interface

MICROCHIP

These devices support the single I/O UNI/O™ serial bus. By using Manchester encoding techniques, the clock and data are combined into a single, serial bit stream (SCIO), where the clock signal is extracted by the receiver to correctly decode the timing and value of each bit.

New

Low-voltage design permits operation down to 1.8V (for 11AAXXX devices), with standby and active currents of only 1 uA and 1 mA, respectively.

EEPROM - I²C Serial with Half-Array Write Protect

MICROCHIP

New

These devices are 1 Kbit and 2 Kbit I²C serial Electrically Erasable Programmable Read Only Memory (EEPROM). They are of low current design and feature hardware write protection for half array.

EUI-48™ MAC Address Pre-Programmed Serial EEPROM

New

MICROCHIP

These devices are serial EEPROMs that come pre-programmed with unique EUI-48™ MAC addresses. The code is write-protected to ensure that they cannot be modified. These devices also come with scratch-pad EEPROM memory to help store configuration data or store small amounts of memory. Finally, the EUI-48™ code is also EUI-64™ compatible.

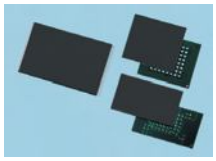
MPLAB Starter Kit for Serial Memory Products

Microchip's MPLAB Starter Kit for Serial Memory Products includes everything necessary to quickly develop a robust and reliable Serial EEPROM design, and reduces the time required for system integration and hardware/software fine-tuning.

Kit Contents:
- MPLAB Starter Kit for Serial Memory Products board
- CD (including MPLAB IDE, Integrated Serial EEPROM interface tool, Total Endurance™ software model, User's Guide)
- USB cable
- Serial EEPROM sample pack



509600

	Mftrs. List No.	Order Code	Price Each
MPLAB Serial Memory Starter Kit	DV243003	159-4509●	57.20

Features:
- 3.3V and 5.0V on-board voltage selection
- Supports Microchip UNI/O™ bus, I²C™, SPI, and Microwire Serial EEPROMs
- 1.8V to 5.5V external voltage support
- Free copy of MPLAB IDE
- USB interconnect
- Windows 2000, XP, and Vista (32-bit)

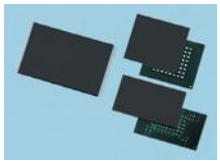
MirrorBit™ Low Voltage Flash Memory



The MirrorBit™ cell is a breakthrough in NOR Flash memory cell architecture that enables a Flash memory product to hold twice as much data as standard Flash, without compromising device endurance, performance or reliability.

Features:
- Two bits of data stored in one memory cell; simple, symmetric cell architecture
- Two distinct charge storage areas within a single cell
- Two independently programmable units of charges per cell
- Easily scalable cell architecture
- Performance-enhancing read and write page buffers
- Flexible sector architecture

S29GL MirrorBit® Flash Family

The MirrorBi®t cell is a breakthrough in NOR Flash memory cell architecture that enables a Flash memory product to hold twice as much data as standard Flash, without compromising device endurance, performance or reliability.

Features:
- Single 3V read/program/erase (2.7-3.6 V)
- 8-word/16-byte page read buffer, 32-word/64-byte write buffer
- 128-word/256-byte Secured Silicon Sector (secure ID through an 8-word/16-byte random Electronic Serial Number)

DataFlash® Memory

ATMEL

These devices are all serial interface Flash memory. They have been designed for use in a wide variety of high-volume consumer based applications in which program code is shadowed from Flash memory into embedded or external RAM for execution. The flexible erase architecture makes them ideal for data storage, eliminating the need for additional data storage EEPROM devices.

Features:

- ● Serial Peripheral Interface (SPI) Compatible
- - Supports SPI Modes 0 and 3
- ● Data Retention: 20 Years
- ● Automatic Checking and Reporting of Erase/Program Failures
- ● JEDEC Standard Manufacturer and Device ID Read Methodology
- ● Flexible, Uniform Erase Architecture
- - 4-Kbyte Blocks
- - 32-Kbyte Blocks
- - 64-Kbyte Blocks
- - Full Chip Erase

Atmel AT45D Dataflash Memory

The Atmel AT45DBxxxx DataFlash family features all the storage performance of existing "parallel" NOR Flash architecture FLASH memories, but uses only 7 control signals to interface to a host processor. The DataFlash device's high-speed Serial SPI Interface frees up I/O pins on the host processor for other uses, and allows the DataFlash devices to be squeezed into smaller packages (8-pin SOIC up to 4 Mbits) which take up less board space. The devices are available in memory densities from 1 Mbits to 64 MBits and feature small page sizes with extra user-defined padding bytes per page for CRC checking or other custom uses.

DataFlash devices are ideal for both non-volatile code and data storage requirements. They are perfectly suited for digital voice, image, and data storage applications where small physical size and low power consumption is required.

Features:

- Available in densities from 1 Mbits to 64 Mbits (simple upgrade path)
- Simple SPI Serial Interface requiring only 7 pins to interface to host processor
- High-speed SPI data transfer at up to 20 MHz
- One / two on-chip, bi-directional buffers to expedite the flow of data to/from the device
- Small page size with extra "padding" bytes:
- 1 - 4 Mbits: 264 bytes
- 16 - 32 Mbits: 528 bytes
- 64 Mbits: 1056 bytes
- Voltage range: 2.7 - 3.6 V
- Standby Current: typically 2 uA

Atmel AT45D - Serial DataFlash Memory Card (MMC format)

The Atmel AT45D 2/4/8 Mbit DataFlash device is available in the popular "MultiMediaCard (MMC)" package. These devices are pin-out compatible with the SPI version of the MMC card and can be used in any device which utilises this protocol.

The small form factor (32 x 24 mm) and simple SPI Serial Interface make the DataFlash Card ideal for a wide variety of data and program code-storage applications where a removable storage medium is required.

E-blocks MMC Card Reader board EB037

The main function of this E-block is to add the capabilities of storing and retrieving large amounts of data for use elsewhere in an electronic system. Use of the MMC card reader allows users to add up to 1GB of additional memory to an electronic system.This E-blocks can be added to any microcontroller that has a USART interface.

- Provides large memory storage capability
- PC comaptible storage
- SPI serial MMC interface

Compact Flash Memory Cards

ST Industrial Compact Flash Cards are designed to meet the growing Enterprise System OEMs demand for high performance, high reliability, compact size and reliable operation in extreme environments. Featuring sustained write speed increases, small form factor, shock and vibration resistance, as well as extended working temperature range, they are the perfect solution for industries requiring higher qualitative and performance functions to replace failing hard disk drives.

Features:

- Fully compliant with PCMCIA specification
- PC card ATA interface supported
- True IDE mode compatible
- Low power CMOS technology
- Power-saving mode (with automatic wake-up)
- Data reliability

Serial FLASH Memory

The M25PX family are high throughput serial flash. They have been designed to address the needs of applications requiring higher clock frequency, for example set-top-boxes, digital flat panels, optical disk drives etc.
The M45PE family are high capacity, non-volatile memories which offer a high level of granularity. Each page can be individually erased and programmed, with a Write instruction that allows data updates at the byte level.

Serial FLASH memory from Numonyx feature:

- 2.7V to 3.6V single supply voltage
- SPI Bus compatible Serial Interface
- 20MHz (or 25MHz for 2M, 4M, 8M) clock rate
- Deep Power-down mode 1μA (typical)
- 100,000 + erase/program cycles per sector
- 20+ years data retention

SST 25x Serial Flash Memory

SST's 25 series Serial Flash family features a four-wire, SPI-compatible interface that allows for a low pin-count package which occupies less board space and ultimately lowers total system costs.

- Fast Erase and Byte-Program
- Auto Address Increment (AAI) Programming
- End-of-Write Detection
- Software Write Protection
- Write Protection (WP#)
- Enables/Disables the Lock-Down Function of the Status Register

Features

- Single Voltage Read and Write Operations
- Superior Reliability
- Serial Interface Architecture
- Flexible Erase Capability
- SPI Compatible: Mode 0 and Mode 3

Boot Block FLASH Memory

AMIC numonyx SPANSION

SMD

A range of Boot Block FLASH devices, these memory devices are capable of programming, erasing and reading with a single 5Volt supply. They contain a 'boot block' section of memory which resides either at the top or bottom of memory depending on the device selected. The organisation of the memory size is related to the size of the bus width selected, the selection of either 8 or 16 bit mode made by a logic signal to a device pin.
Memory blocks can be protected from programming or erasure to prevent accidental overwriting of data.

Features:

- Fast access time
- Fast programming time 10µs by byte/16µs by word typical
- Block, Multi-Block and Chip Erase
- Multi-block Protection/Temporary Unprotection modes
- 100,000 Program/Erase cycles
- Electronic Signature
- Single 5 Volt supply for Program/Erase/Read

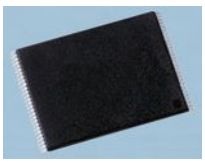
SST39x Flash Memory

These devices are CMOS Multi-Purpose Flash (MPF) manufactured with SST's proprietary, high performance CMOS SuperFlash technology. The SuperFlash technology provides fixed Erase and Program times, independent of the number of Erase/Program cycles that have occurred. Therefore the system software or hardware does not have to be modified or de-rated as is necessary with alternative flash technologies, whose Erase and Program times increase with accumulated Erase/Program cycles.

Features



- Single Voltage Read and Write Operations
- Superior Reliability
- Low Power Consumption (typical values at 14 MHz)
  - Active Current: 5 mA (typical)
  - Standby Current: 1 µA (typical)
- Fast Read Access Times
- Latched Address and Data
- Automatic Write Timing
- CMOS I/O Compatibility
- Sector-Erase Capability
  - Uniform 4 KB Sectors

EPROMs, EEPROMs and FLASH Memory - continued

SST36VFx Flash Memory

These devices are suited for applications that require convenient and economical updating of program, configuration or data memory. For all system applications, the devices significantly improve performance and reliability, while lowering power consumption.

Features

- Single Voltage Read and Write Operations
- Low Power Consumption
- Superior Reliability
  - Endurance: 100,000 Cycles (typical)
  - Greater than 100 Years Data Retention (typical)
- Sector-Erase Capability
- Block-Erase Capability
- JEDEC Standard
- End-of-Write Detection
- CMOS I/O Compatibility

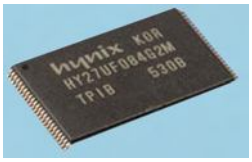
AT49BVxxx Flash Memory

AT49BV040B Features:

- Single Supply for Read and Write: 2.7V to 5.5V
- Internal Program Control and Timer
- Fast Erase Cycle Time - 8 Seconds
- Byte-by-Byte Programming - 10 µs/Byte Typical
- Hardware Data Protection



AT49BV1x/3x/6x Features:

- Single Voltage Read/Write Operation: 2.65V to 3.6V
- Fast Word Program Time: 10 µs
- Low-power Operation:
  - 10 mA Active
  - 15 µA Standby
- 128-bit Protection Register

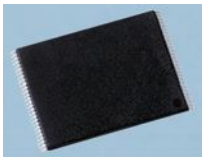
NAND Flash

HYNIX NAND flash technologies are applicable to all storage devices such as memory sticks, MMCs, SDs, CFs, xD picture Cards, and USB Flash Drives.



Features:

- High density NAND flash memories
- Copy back program mode
  - Fast page copy without external buffering
- Electronic Signature
  - Manufacturer Code
  - Device Code
- Automatic page 0 read at power-up option
  - Boot from NAND support
  - Automatic Memory Download
- Data integrity
  - 100,000 Program/Erase cycles
  - 10 years Data Retention

NAND Flash

The NAND Flash 528 Byte/ 264 Word Page is a family of non-volatile Flash memories that uses NAND cell technology. The devices range from 128Mbits to 1Gbit and operate with either a 1.8V or 3V voltage supply. The size of a Page is either 528 Bytes (512 + 16 spare) or 264 Words (256 + 8 spare) depending on whether the device has a x8 or x16 bus width.

Features:

- High Density NAND Flash Memories
- Multiplexed Address/ Data
- Fast page copy without external buffering
- Simple interface with microcontroller
- Program/Erase locked during Power transitions
- 100,000 Program/Erase cycles & 10 years Data Retention
- Pinout compatibility for all densities

ATA Flash Disk Controllers

Features

- Industry Standard ATA/IDE Bus Interface
- Interface for standard NAND Flash Media
- Power Management Unit:
- Low Current Operation:
  - Active mode: 25 mA/35 mA (3.3V/5.0V) (typical)
  - Sleep mode: 40 µA/50 µA (3.3V/5.0V) (typical)
- 20-byte Unique ID for Enhanced Security
- Pre-Programmed Embedded Firmware
- Internal or External System Clock Option
- Multi-tasking Technology enables Fast Sustained Write Performance (Host to Flash)

RL Re-reeling available

The ATA Flash Disk Controller recognizes the control, address, and data signals on the ATA/IDE bus and translates them into memory accesses to the standard NAND-type flash media. The SST55LD019A/B device supports Single Level Cell (SLC) flash media. The SST55LD019M device supports Multi-Level Cell (MLC) and high density Single-Level Cell (SLC) flash media.

Programmers & Erasers, Emulators, Logic/USB Testers & Analysers

GALEP-IV Pocket Multiprogrammer

This programmer measures 115mm x 80mm x 33mm, it fits into a pocket or technician's toolkit. It has a universal programming capability with a custom ASIC pin driver. It can program the most commonly used programmable devices such as EPROMS, EEPROMs, FLASH EPROMs, ZERO POWER RAMs, GAL's, PALCE's and microcontrollers with low voltage support to 1.3V.

Connection to a PC, laptop or notebook is via a supplied lead to the parallel port and power is supplied by six internal rechargeable NiMH AAA batteries (not supplied) or the supplied AC/DC adapter. The GALEP IV is easily operated via 'Pulldown' menus and dialogue boxes on the PC. LEDs give indication as to the status of the programmer. Around 8 hours continuous can be expected from one charge of the batteries.

This programmer uses flexible pin driver technology and pins are assigned by the software to be inputs or outputs with a flexible voltage range. To support new devices the latest software may be downloaded from the Internet.

Features:
- Pocket size: 115 x 80 x 33mm
- Easy PC connection via printer port
- Fast data transfer, e.g. 27C512 read and compare in 2 seconds
- Supports HEX, JEDEC and binary files
- Software supplied on CD-ROM
- Automatic split/shuffle feature for 8-bit, 16-bit or 32-bit targets
- Software runs under Windows 95/98, ME, NT or 2000
- Integrated HEX and fusemap editor
- Online device list update via Internet

Supported Devices: Over 1300 including 16-bit EPROMS, EEPROMS, Flash EPROMs, Serial EPROMS, GAL's, PALCE's, PIC Microcontrollers

210978

System requirements:
- 486/33MHz minimum
- Windows 95, 98, NT, ME, 2000
- 8MB RAM
- Printer port
- 800 x 600 Screen resolution

	Order Code	Price Each
GALEP-4 pocket programmer EU PSU	120-2535	224.51
GALEP-4 pocket programmer UK PSU	120-2540	224.51
28-32 pin adapter	120-2536	118.39

GALEP-5
High-End Pocket Programmer

CONITEC DATENSYSTEME

- Pocket format: 115 x 80 x 33mm (+7mm socket)
- 48-Pin ZIF socket with 48 universal pin drivers
- Programs low voltage components down to 1.3V
- USB 2.0 high speed port
- Battery compartment for 6 x AAA batteries
- 200 MIPS ARM-9 RISC processor, 64 MB RAM, 8 MB Flash
- FPGA (50K gates, 64Kb RAM)
- 8 Channel D/A converter, 16 channel A/D converter
- Embedded Linux 2.6 inside

GALEP-5 is the smallest offspring of Conitec's fifth generation programmer series; it is powered by the same advanced technology as its bigger brothers. Its main use is for development, service and component programming. However, through its short programming cycles it can also be used as a production programmer. The internal 64 MB RAM serves as data storage and allows you to transfer the data only once for programming multiple devices.

This programmer uses a universal pin driver circuit designed especially for GALEP. This guarantees optimal signal quality for the component to be programmed. It programs all components in DIL sockets between 7.5 - 16mm wide without additional adaptors.

Connection to a PC or laptop is via the supplied USB cable which is also used to power the programmer. As the USB current limit is 500mA, for some old NMOS components and some micro controllers which consume more than 500mA it is recommended that the power supply (supplied) or 6 x AAA batteries (not supplied) are used to ensure USB compatibility. To support new devices the latest software may be downloaded from the Internet.

Supported Devices: Over 4500 devices are supported with types including Serial EEPROM, EPROM, MCU, PLD, NV-RAM.

System requirements:
- PC or Laptop with Pentium Processor
- Windows 95, 98, ME, NT4, 2000, XP, Vista
- USB 1.0 or 2.0 port

LEAPER-3C and LEAPER-3D Handy FLASH Writers

LEAP ELECTRONIC CO.,LTD.

LEAPER - 3C and LEAPER-3D are specially designed for FLASH series, integrating powerful hardware and software for high quality performance.

Features:
- Small, portable & usable with battery
- Two types of high efficient work mode: Standalone and PC based(3D is PC only)
- LCD display 16 X 2 characters
- Software contains type/read/check/program/verify/disk/help/process/parameter
- programming flow chart, voltage, pulse width & other parameters
- Powerful HEX/ASCII memory and fuse-map, test library and full screen edit
- Binary code, Intel HEX and 80/86 HEX supported
- Standard accessories are: USB port, DC 9V/500mA power adapter(not supplied), CD-ROM Containing driver and manual.

Supported Devices:
- EPROM: 27C/LV64 - 27C/LV080
- EEPROM: 27C64 - 28C040
- FLASH EPROM: 29C/LC256 - 29C/LC040, 29EE/LE/VE512 - 29EE/LE/VE020, 28F/LF/VF256 - 28F/LF/VF040, 29F010 - 29F040, 29F001 - 29F002, 39SF/VF512 - 39SF/VF040, 49BV/F512 - 49BV/F040, 49BV/F/LV001 - 49BV/F/LV002

LEAPER-48 HANDY UNIVERSAL WRITER

LEAP ELECTRONIC CO.,LTD.

Features:
- High performance, low cost, small, light, portable and professional design
- Uses USB interface to link with PC
- Support low voltage components up to 2.5V user selectable verify voltage
- Support FLASH/EPROM device speedy programming function. Takes 30 seconds to

RL Re-reeling available

Farnell

Programmers & Erasers, Emulators, Logic/ USB Testers & Analysers - continued

LEAPER-48 HANDY UNIVERSAL WRITER - continued

process one piece of 16M bits FLASH memory.
- Universal converters for virtually all devices in one package
- Auto detect and contact check on device pin insertion, powerful graph showing Device situation.
- Device socket 48-pin ZIF socket accepts both 200 - 600 mil DIP devices up to 48 pins
- Standard accessories are; USB cable, Operation software on CD - ROM, DC 12V/2A Adaptor(not supplied)

Supported Devices:
- EPROMs, EEPROMs, FLASH EPROMs, Serial E/EPROMs, NV RAMs, Microcontrollers, DSP, PLDs

USB Handy MCS-51 IC Programmer

LEAP ELECTRONIC CO.,LTD.

40-Pin USB Programmer

Features:
- Portable battery powered or mains USB programmer
- Capable of programming 40 pin MCS-51 8-Bit ICs
- Compatible with Windows 95/98/2000/XP
- Friendly graphics operation interface
- 4 seconds to erase / blank check / programme & verify an Atmel AT89S52 IC
- Multi-function device type / read / load / edit / check / sum / erase / blank check / program / verify / protect
- Supports binary, machine code, Intel HEX, Motorola Hex, Tektronix

MEMPro - Universal Memory Programmer

The Dataman MEMPro is a PC based universal 40-pin memory programmer with USB 2.0 connectivity. The MEMPro is built to meet the demands of development labs and field engineers for specialized programming.
Dataman MEMPro is a small, fast and powerful programmer supporting a huge range of programmable memory types - EPROM, EEPROM, NVRAM, Flash EPROM and serial EEPROM - including low voltage types. MEMPro isn't only a programmer, but also a static RAMs tester.

- 40 pin ZIF socket accepts both 300/600 mil DIP devices up to 40 pin
- Advanced pin drivers allow varying voltages to be applied to any pin delivering signals without overshoot, increasing programming yield
- Pin drivers operate down to 1.8V so you will be ready to program the full range of tomorrow's advanced low-voltage devices
- USB 2.0/1.1 connectivity allowing fast and easy connection to PC's and laptops
- Upgradeable to 40Pro programmer
- 1 year warranty
- Free software updates via Dataman website

Supplied with mains adaptor, USB cable, ISP cable (useable after upgrade to 40Pro), diagnostic POD (ZIF), anti-dust cover (ZIF), user manual and software (Windows 98/ME/NT/2000/XP/2003/XPx64/Vista)

PIKPro - PICmicro Series Programmer

The Dataman PIKPro is a PC based 40-pin PICmicro series programmer with ISP capabilities and USB 2.0 connectivity. The PIKPro is built to meet the demands of development labs and field engineers for specialized programming.
Dataman PIKPro is a small, fast and powerful programmer supporting a huge range of programmable PICmicro devices. Using the in-circuit serial programming connector (ISP), the programmer is able to program ISP capable chips.

- 40 pin ZIF socket accepts both 300/600 mil DIP devices up to 40 pin
- Advanced pin drivers allow varying voltages to be applied to any pin delivering signals without overshoot, increasing programming yield
- Pin drivers operate down to 1.8V so you will be ready to program the full range of tomorrow's advanced low-voltage devices
- USB 2.0/1.1 connectivity allowing fast and easy connection to PC's and laptops
- Upgradeable to 40Pro programmer
- 1 year warranty

48Pro+ Universal ISP Programmer

The Dataman 48Pro+ is a PC based universal 48-pin programmer with ISP capabilities and USB 2.0 / parallel connectivity. Supporting over 40,000 devices with new support added monthly, the Dataman 48Pro+ can program without the need for family-specific modules, giving you the freedom to choose the optimal device for your design.
The 48Pro+ is built to meet the demands of development labs and field engineers for universal programming. Using the built-in, incircuitserial programming (ISP) connector, the programmer is able to program ISP compatible chips in circuit.
Supplied with mains cable, USB cable, ISP cable, diagnostic POD (ZIF), diagnostic POD (ISP), anti-dust cover (ZIF), user manual and software (Windows 2000/XP/2003/XPx64/Vista)

- 48-pin universal ZIF socket accepts both 300/600 mil DIP devices
- Intelligent pin drivers allow varying voltages to be applied to any pin delivering signals without overshoot, increasing programming yield
- Pin drivers operate down to 1.8V so you'll be ready to program the full range of tomorrows advanced low-voltage devices
- ISP capable using the JTAG interface
- Multiprogramming support allows one PC to control up to four units programming independently or as a gang programmer

448Pro+ Universal ISP & USB2 Quad Independent Device Programmer

The Dataman 448Pro+ is a PC based gang programmer featuring four independent universal programming modules, ISP capabilities and USB 2.0 connectivity. Supporting over 40,000 devices with new support added monthly, the Dataman 448Pro+ can program without the need for family-specific modules, giving you the freedom to choose the optimal device for your design.

The 448Pro+ is built to meet the demands of high volume production programming with minimal operator effort. Independant programming options combine with device insertion tests and a user friendly interface to give higher programming yields and reduced failure rates.

- 4 x 48 pin universal ZIFsockets accepting 300/600 mil DIP devices
- Independent modules supporting concurrent programming
- Intelligent pin drivers allow varying voltages to be applied to any pin delivering signals without overshoot, increasing programming yield
- Pin drivers operate down to 1.8V, ready to programme the full range of future devices
- IISP capable using the JTAG interface
- Various socket converters are available to handle device in PLCC, SOIC, PSOP, SSOP, TSOP, TSSOP, TQFP, QFN, MLF, SDIP, BGA and other packages
- Built-in protection circuits eliminate damage to programming modules and/or programmed devices due to environment or operator failure. All ZIF sockets and ISP connector pins are protected against ESD up to 15kV
- The self test capability allows diagnostics included in the software to thoroughly check the health of the each programming module

Supplied with mains cable, USB cable, diagnostic POD (ZIF), diagnostic POD (ISP), ISP cable x 4, anti-dust cover (ZIF) x4, ESD wrist strap, user manual, software (Windows 2000/XP/2003/XPx64/Vista) and transport case.

848Pro Stand-Alone Production Programmer

New

The Dataman 848Pro is a stand-alone gang programmer featuring eight independent universal programming modules, ISP capabilities and USB 2.0 connectivity. Supporting over 40,000 devices with new support added monthly, the Dataman 848Pro can program without the need for family-specific modules, giving you the freedom to choose the optimal device for your design.
The 848Pro is built to meet the demands of high volume production programming with minimal operator effort. Independent programming options combine with device insertion tests and a user friendly interface to give higher programming yields and reduced failure rates.

- Stand-alone operation with touch screen control
- 8 x 48 pin universal ZIF sockets accepting 300/600 mil DIP devices
- Independent modules supporting concurrent programming
- Intelligent pin drivers allow varying voltages to be applied to any pin without overshoot, increasing programming yield
- Pin drivers operate down to 1.8V so you'll be ready to program the full range of tomorrows advanced low-voltage devices
- 3 year warranty
- Free software updates via Dataman website

Supplied with mains cable, USB cable, ISP cable x 8, diagnostic POD (ZIF), diagnostic POD (ISP), anti-dust cover (ZIF) x 8, ESD wrist strap, user manual and software

JTAGMaster - In-System Programmer

New

In-system programming (ISP) is provided with the JTAGMaster which uses the JTAG interface to send programming and testing instructions to the device on the board. The JTAGMaster supports numerous devices that can be configured in-system.
The JTAGMaster supports the file formats used as industry standards by PLD suppliers such as SVF & JAM STAPL and can program non-JTAG devices such as low voltage EEPROMs.
AIMs is a powerful and flexible platform designed for the control and operation of the JTAGMaster. A full feature of the software, TestFlow Manager, allows users to create automated programming sequences in a simple, step by step structure. Each of these steps will retain operator information (such as text and graphics) as well as the test setup, making it easy for any user to carry out the operation.
The flexibility of the software is retained throughout with customisable windows, library management and user access levels.

Features:

- Powerful and flexible platform designed for the control and operation of the JTAGMaster using AIMs
- Fully featured In-System Programming & Testing
- JTAG / IEEE 1149.1 compatible
- 2 interface headers to allow ease of connection to a wide range of applications
- SVF & STAPL(JAM) Player - plays JAM, JBC, SVF files
- ISP and Standalone Programming for SPI, I2C & Micro wire serial EEPROMs
- Multi-programmer support ideal for gang programming applications

Device Programmer Mode:

- Built-in Power supply from 1.8 to 3.3 Volts
- Plug-in adapter pods support a range of package options for stand-alone mode

Also available are JEDEC & EIAJ SOIC adapters that conveniently map the signal and power supply connections from the JTAGMaster for out of circuit programming.

Universal Programmers

BATRONIX

The new Batronix Professional Programmer Series offers an exceptionally flexible, simple to use and extremely fast set of programming devices that support a broad range of chips including Eproms, EEproms, Flash, serial EEproms and other storage chips. With a height of only 2.5 cm the enclosures are very practical and are noted for their design and anodized die-cast aluminum construction. These programming devices are your first choice even in a harsh usage environment.

The exceptional flexibility is attained by providing all power requirements via the USBport. A power adapter or batteries are not required, since all programming voltages between 3 and 25 volts are provided internally by a voltage generator from the USB supply voltage. The chips are programmed at a high level of quality and reproducibility in the shortest time possible through the use of optimized algorithms and micro-controller managed programming times. All supported chips can be programmed directly in DIP/DIL packages and suitable adapters are available for specialized packages such as PLCC, SOP und TSOP.

Hardware Features:
- USB Powered
- Chip Auto-Identification
- Multi Programmer Control (up to 8)
- Automatic programming start (for mass production)
- High Speed technology

Software Features:
- Process Control
- Projects
- Accepted file format: Binary, Intel-Hex and Motorola S
- Data and Chip Offset functions
- Complete 16 and 32 bit splitting
- Convenient Hex Editor
- Flexible serial number generation
- For use with Windows 98SE, ME, 200, XP, 2003, Vista
- Various languages supported

Hardware Details	BX32 Batupo	BX32P Barlino	BX40 Bagero
Interface	USB 2.0 / 1.1 (Full Speed)		
Socket	32 Pins		40 Pins
Low Voltage Support	—	down to 3V	
Dimensions (cm)	9 x 8.5 x 2.5		14 x 8.5 x 2.5
Weight (Gramm)	158	160	242
Warranty	5 Years		

The programming devices can be easily controlled using the modern and intuitive Prog-Express software. Chips inserted in the device can be detected automatically by the software and programming a chip from a file or copying an existing chip is done with a few mouse-clicks. Despite the easy to use interface, professional protection, split, autoidentify, auto-start and serial-number functions as well as a convenient hex-editor areavailable in addition to the basic functions like read, program, compare and erase.

Software updates can be downloaded free of charge at www.batronix.com.

For bulk production of chips up to eight BX32, BX32P or BX40 devices can be controlled simultaneously from one PC using the Prog-Express software. These programming devices are a better alternative to expensive gang-programming devices due to their low cost and extremely high programming speeds and also offer greater flexibility.

The newly developed control technology and USB 2.0 / 1.1 compatible full-speed data transfer rates put the BX32 / 32P / 40 among the fastest programming devices currently available. For example, 27SF256 (erasable 27C256) chips can be programmed in under two seconds and even complex, sequential-based 4MB chips like the AM29F040 can be programmed completely in under ten seconds. Delivery including programmer, USB cable, Prog-Express software, manual (multi language) on CD.

Superpro 3000U

XELTEK

Ultra Fast 48-Pin Stand-Alone and USB interfaced Universal Device Programmer

Features:
- A fast, low-cost programmer designed to program high-density Flash memory devices at a near theoretical minimum programming time
- User-friendly, powerful software
- Standard universal 48-pin drivers support devices down to 1.5V
- Advanced hardware design minimises ground bounce noise
- Designed for multi-applications with three modes of operation supported - PC hosted operation for R&D and Engineering, Stand-alone operation for manufacturing or service, Terminal mode to operate via an external instrument such as IC handler (Requires optional flash card)
- Over-current and over-voltage protection for satety of the chip and programmer hardware, also pin continuity and wrong chip insertion check to prevent accidental damage
- Optional expansion module for programming devices up to 100-pins

Specifications:
- Devices Supported include - EPROM, EEPROM, FPGA, FLASH Memory, Firmware HUB, Microcontroller, MCU, Standard Logic
- Socket Adaptors Supported include - DIP, PLCC, SOIC, TQFP, SOP, TSSOP, SON etc.
- Compatible with Windows 98/Me/NT/2000/XP via USB connection

QuickWriter™ MCU Programmer & Programmer Adapters

The Quick Writer is a professional grade PIC programmer that offer many features only found in high end production programmers. Besides being a high speed in-circuit programmer, each quick writer can be quickly converted (with the addition of an adapter) into a full scale production gang programmer.

The Quick Writer comes complete with everything needed to in-circuit program a wide array of PIC microcontrollers.

Features Include:
- Programs 4 devices as quickly as a single device when using a Gang adapter
- Supports In-Circuit Programming with the included cable
- Auto increment or manually enter serial numbers in Code or Data locations
- Supports industry standard INHX8M, INHX32 and Parallax ".obj" HEX files
- Supports existing Parallax and PICwriter programming adapters
- Enable/Disable each programmable area of the MCU
- Serial communication port connectivity
- EEPROM / Calibration editing
- FLASH firmware updates

WICE-M4 4MB ROM Emulator

A small, portable and easy-to-use EPROM emulator, supporting the range of 27C16 to 27LV040 32 pin devices. Replacing the WICE-M1 device, it has more memory, is smaller and operates with a USB Port rather than the Printer Port. The software allows the display and editing of files in formats including binary/machine code and HEXadecimal. (Note: Power adaptor not included)

Features:
- Interfaces with Windows 98/ME/2000/XP via USB connection
- Device plugs directly into IC socket - eliminating noise and time delay caused by cable
- Detects wrong insertion and prevents from exceeding 5V input
- Supports 3.3 to 5V devices
- Speed of emulation SRAM access time +10ns

Includes:
- Main Unit
- USB Cable
- Operation Software CD (inc. User Manual)
- Reset Signal Line

Packet-Master USB12 Bus Analyser

The Packet-Master USB12 is a Hardware USB Bus Analyser, intended for development of Low and Full Speed USB devices and hubs etc. It comes complete with our Windows application Graphic USB for capturing and displaying every detail of the data interactions on a USB link.

Hardware features:
- Activity indicator shows presence of data exchanges
- USB through-connectors for device under test
- Analyses Low Speed (1.5 Mbit/s), Full Speed (12 Mbit/s) or a mixture of both
- Automatically detects speed of link under test
- USB Bus Powered for convenience of use
- High Speed USB (480 Mbit/s) connection to host PC
- Feature connector provides signals for oscilloscope or logic analyzer

DigiView Logic Analyzer™

100 MHz, 18 Channel

The DigiView 100 MHz USB Logic Analyzer is a fast, compact, 18 channel USB logic analyzer. It is so small that it will easily fit into the palm of a hand, yet powerful enough to handle even the most complexes of tasks. Its sizes and power requirements makes it very useful in field applications, while its feature set will make it a staple of every work bench.

Hardware Features:
- 18 Channels
- USB interface and power source for portability
- Real time Hardware Compression
- Eliminates Resolution vs. Depth tradeoffs
- Trigger on rising, falling or transition of any channel
- Multi-channel High, low and don't care trigger qualifier

Software Features:
- Supports Analog, Boolean, BUS, State Mode, I2C, Synchronous (i.e. SPI) and Asynchronous (i.e. RS-232) signal viewing
- Signal grouping for bus identification and values
- Sequential Searches for Specialized Signals

System Requirements:
- Windows 98SE/2K/ME/XP/XPpro
- Pentium Class Processor (200 MHz or higher recommended)
- 9 Meg of RAM (+Operating System Requirements)
- USB Port (1.1 or 2.0)

PC-Based Logic Analyser

LEAP ELECTRONIC CO.,LTD.

New

This PC based logic analyser provides digital software and hardware designers the ability to readily capture the complex signals in a digital environment that require analysis and/or debugging. The compact size and USB connectivity to a laptop makes them an ideal solution for field applications.

Features:
- Internal (asynchronous) and External (synchronous) capture
- Provide binary code and hexadecimal List mode (State) display
- Able to save the measuring data and waveform completely
- Offers I^2C, SPI, UART etc. signal decode function
- No need extra power, connects to the USB

LP-1 Digital IC Tester

LEAP ELECTRONIC CO.,LTD.

This is an economical, hand-held digital IC tester capable of testing most TTL74, CMOS 4000, CMOS 4500 DRAM41 and DRAM44 series devices.

Powered from 4x1.5v AA batteries or external 9VDC power supply the unit features a 16 character LCD display and a 24 way universal ZIF socket capable of supporting devices from 14 to 24 pins and device widths of 0.3" to 0.6".

The tester has an internal database which the user can scroll up or down to select the appropriate device to test, or alternatively an automatic function may be used in which the unit will attempt to match an unknown device placed in the ZIF socket to the database (74TTL or CMOS only).

SENTRY - Counterfeit IC Detector

abi

New

Counterfeit and fake IC's are a major problem within the supply chain and to protect you at the goods inward stage Sentry is a simple yet powerful instrument designed to ensure that components are what they claim to be. It is a PC driven product which uses a complex PinPrint Test Analysis algorithm to check the validity of parts in seconds.
The operation of the system is straightforward and designed to give clear and easy to understand results for all levels of operator experience and personnel can simply relate to the pass or fail results given.
For further analysis and traceability, the Sentry software will produce a specialised report which can be sent back to the supplier or manufacturer.

Specifications:
- 128 channels (can be upgraded to 192 or 256 channels)
- Includes many device packages including DIL, SOIC, PLCC, BGA, etc
- Full library management - New devices and packages can be added quickly and easily using built-in library management tools
- PC Software included with high-speed USB 2.0 interface
- Automated operation under Windows XP or Vista
- Easy installation (up and running in minutes)
- Small footprint for portability
- No training required
- Power input 115/230 VAC 50/60 Hz

Also available is a Sentry 64 Channel Upgrade Module for higher pin count devices.

LEW300

LEW902

LEW907

LEW904

This range of socket adapters is designed to fit any ZIF socket based programming platform and enhance these platforms to be able to program virtually the complet range of package styles available for the PIC microcontroller families.
A base board and adapter board is required to program almost any PIC12, PIC16 or PIC18 microcontroller. The base board fits into the ZIF socket of the programmer. There are two of these available, both of which have quality board-to-board IDC connectors for quick and reliable connection of the desired device package adapter top board. These adapter boards cover a widse range of package types.
This group of adapters works with a large range of programming platforms. Microchips ICD2, PICStart Plus and Promate Sytems are supported, plus Dataman, Stag, AVR, ST6 and BP Microsystems etc.

Programming Adaptors

479-860 479-871 479-810 479-925

A selection of the most popular adapters to suit the varied package styles of ICs, these adapters are generally used when converting from a Dual-In-Line (DIL) to a Surface Mount Device (SMD) style.

A typical example of an application would be to program an EPROM or microcontroller in a PLCC style surface mount package, from a programmer which has only a Dual-In-Line style ZIF socket on board.

The associated programmer to which the adapter is intended to be used on is listed, this is to ensure compatibilty between the parts.

Microconverter ADuC8XX QuickStart™ Development System

The 'entry level' QuickStart Development System allows designers to rapidly evaluate microConverter performance and functionality, and then begin a prototype development. The system provides all of the tools the designer needs including software tools, development board, integrated serial download/debug cable and power supply. It fully supports assembly level code development via a serial port debug path and provides designers with access to a demonstration project of the C-level development environment available in QuickStart-Plus. The system also includes the new 'aspire' Integrated Development Environment (IDE) facilitating easy assembly level code development with project manager, assembler, downloader, simulator and debugger in one easy to use IDE.

Microcontrollers and Microprocessors - 8-Bit - ATMEL

AVRISP - Low-cost In-System Programmer for Atmel AVR FLASH Microcontroller Family

The 'AVRISP' is a low-cost in-system programmer (ISP) supporting the Atmel AVR FLASH microcontroller family. The programmer plugs into the user Target System via a 6-pin ISP header and draws its power from the target. The Atmel 'AVRStudio' application is used to control the programmer via a spare PC COM (serial) port.

Features

- ISP programming of all in-system programmable AVR devices
- Programs FLASH, EEPROM, FUSE and Security bits
- Supports programming of the RC Oscillator Calibration Byte
- Powers from the Target System (2.7 - 5.5V - no external power supply required)
- Adjustable SPI speed. Supports all Target Boards running at >8KHz
- 'AVR Studio' PC interface software
- DOS command line interface also available
- Connects to spare PC COM (serial) port
- Supplied with 6-way ISP cable

System Contents

- AVRISP - ISP programmer
- Atmel 'AVR Studio' software on CD-ROM
- PC serial cable (9W - 9W)
- 6-way ISP cable

Device Support

- ISP (off-board) - AT90S, ATtiny, ATmega

AVR®JTAGICE mkII On-Chip Debug System

The AVR JTAGICE mkII is a powerful development tool for on-chip Debugging. It is for use with all AVR 8-bit RISC microcontrollers with IEEE 1149.1 compliant JTAG interface or debugWIRE interface. DebugWIRE uses a single wire for the interface to enable on chip debug of AVR microcontrollers in small pin count packages. The user is given complete control of the internal resources of the microcontroller and development time is reduced using the AVRstudio user interface. Real-Time emulation of the microcontroller can be performed while it is running in a target system.

Features:

- Full JTAG programming support
- USB 1.1 or RS-232 interface to the PC
- Supports multiple devices in JTAG Scan Chain
- Full support for Assembly and High Level Languages
- TArget voltage 1.8 - 5.5V
- Supply voltage 9 - 12V, or powered from USB Port

Atmel AVR JTAGICE2 Debug System and ATMEGA128 Test Board Value Pack

The AVR JTAGICE2 is a powerful development tool for on-chip debugging of all AVR 8-bit RISC MCUs and AVR 32-bit MCUs . The user is given complete control of the internal resources of the microcontroller and development time is reduced using the AVRstudio user interface.
The Jade ATMEGA128 test board is designed to aid the development of products using the ATMEGA series of microcontrollers.
Included with this value pack is a 10-way IDC to directly interface the Test Board to the JTAG Emulator / Programmer (JTAGICE).

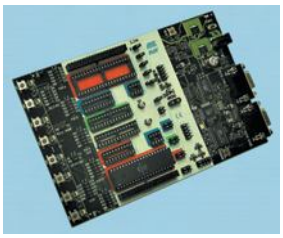
ATAVRMC100 Brushless DC Motor Evaluation Kit



The ATAVRMC100 is an evaluation kit dedicated to brushless DC motor control, for both Hall effect sensor control and sensorless control using Back ElectroMotive Force. The kit includes an evaluation board, a 3-phase BLDC motor and a demonstration software. It allows users to quickly evaluate the capability of the AVR microcontroller AT90PWM3 to control high speed brushless DC motor applications. The kit can also serve as a development platform.

Kit Features:
- Evaluation Board with AT90PWM3 Microcontroller
- 3-phase BLDC Motor
- For both Hall Sensor and Sensorless Applications
- Supports In-System Programming and Chip Emulation
- Kit includes CD-ROMs with Datasheets, Application Notes & Demonstration Software.

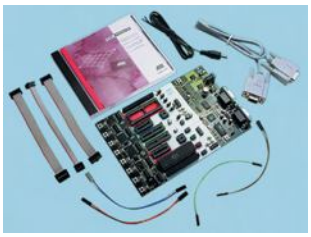
STK500 - Professional AVR FLASH Microcontroller Starter System

The Atmel STK500 is a comprehensive Starter System for the Atmel AVR FLASH Microcontroller family. The system comprises of a single board module which features IC sockets for all the popular dual-in-line AVR devices. It is possible to 'in-system program' (ISP) and 'Parallel' program AVR devices on the STK500 and also to use the board to ISP a device on a seperate Target System. It can be used as an evaluation board by connecting up various on-board peripherals including LED's and push buttons.



Features:
- AVR studio software interface
- RS-232 interface to PC for programming and configuration
- Second RS-232 port for user application
- External power supply required (9V - 12V DC)
- Sockets for 8, 20, 28 and 40 pin AVR devices
- Serial In-system programming (ISP) of AVR devices
- In-system programmer for programming AVR devices in an external target system
- Parallel and serial high-voltage programming of AVR devices
- 8 x push buttons and 8 x LED's for general use
- All AVR I/O ports easily accessible through pin header connectors
- Expansion connectors for plug-in modules (e.g. STK501) and prototyping area
- Flexible clocking, voltage and reset system

Device Support:
- ISP (on-board) - AT90S, ATtiny, ATmega (ATmega103/128 - requires STK501) devices
- Parallel (on-board) - ATS, ATmega (ATmega103/128 - requires STK501) devices
- ISP (off-board) - AT90S, ATtiny, ATmega

AVR Professional Development system with C compiler

The STK500/IAR "C" is a full development system containing everything needed to develop projects for the Atmel AVR microcontroller family. This kit is a collaboration between Atmel and IAR Systems.

Features of the STK500/IAR "C":
- Serial In-System programming of AVR devices
- In-System programming in external target systems
- Parallel and serial high voltage programming of AVR devices
- Sockets for 8, 20, 28, and 40 pin AVR devices
- RS232 interface to PC and spare RS232 connector & driver for general use
- Expansion connectors for plug-in modules and prototype areas
- LEDs and push buttons for experimentation
- All AVR I/O ports easily accessible through pin header connectors
- Atmel's AVR Studio 3 and AVR Studio 4 interface software (CD ROM)
- IAR Systems' EWAVR "C" compiler and debugger (4K byte output code size limited). Support and free updates direct from IAR for 3 months from registration date.
- Flexible clocking, voltage, and reset system
- Regulated power supply for 10 to 15V DC supply.

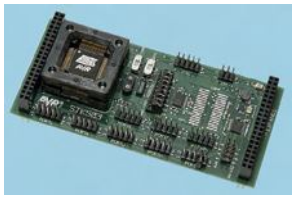
AVR® STK500 Expansion Boards

STK501

STK502



These expansion boards are designed as hardware expansion modules for the STK500 Starter Kit (Order Code: 388-4429).
The STK502 adds support for the 64-pin LCD AVR family with on-chip LCD controllers, and the Mega AVR family. The STK501 extends support to all current AVR® devices. A Zero Insertion Force (ZIF) socket allows easy use of TQFP packages for prototyping.

Features:
- AVR Studio® operated
- Plug-in module for STK500
- Serial In-System Programming
- Parallel High-voltage Programming
- All I/O ports easily accessible through Pin Header connectors
- TQFP Footprint for Emulator adapters
- JTAG connector for On-chip debugging using the JTAG ICE
- Target Voltage of 2.7 - 6.0V (STK501) or 1.8 - 5.5V (STK502)
- Powered by STK500

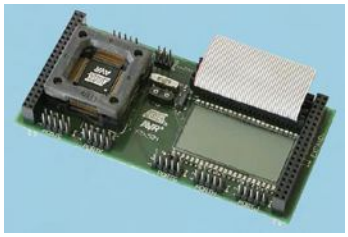
STK503 Expansion Board

The STK503 Expansion Board is designed as a hardware expansion module for the STK500 Starter Kit (Order Code: 388-4429). It adds support for 100-pin AVR microcontrollers (ATmega2560, ATmega1280 and ATmega640). STK530 includes connectors and hardware allowing full utilisation of the features of these devices, while the Zero Insertion Force (ZIF) socket makes it easy to use TQFP packages for prototyping.



Features:
- Supports High Voltage Parallel Programming through STK500
- Supports Serial Programming through STK500
- On-board RS-232 converter covering operating range 1.8-5.5V
- Footprint for user-mountable SRAM
- JTAG Connector for on-chip debugging using JTAGICE mkII
- 32 kHz crystal for Real Time Clock implementations
- Supported by AVR Studio 4

STK504 Hardware Expansion Module

New

The STK504 board is a hardware expansion module for the STK500 Starter Kit. It adds support for the 100-pin LCD AVR family featuring an on-chip LCD controller and the Mega AVR family.The STK504 includes connectors, jumpers and hardware allowing full support for all features on the included ATmega3290, including a versatile LCD-display.

Features:
- Supports the ATmega3290 and ATmega6490 with built-in LCD controller
- Supports the ATmega3250 and ATmega6450.
- LCD glass for demonstrating the LCD controller
- Connector for using an external LCD display
- Supported by AVR Studio 4
- Zero Insertion Force (ZIF) socket for 100-pin TQFP packages
- Supports High Voltage Parallel Programming through STK500
- Supports Serial programming through STK500
- Port connectors for port E, F G, H and J

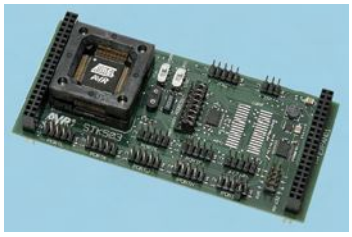
STK505 Starter Kit



The STK505 Board is a top module for the STK500 Development Board. It supports the ATtiny24 and ATtiny26, and includes connectors and hardware that allow full utilization of these devices.
Included in the kit are samples of ATtiny24 and ATtiny26 microcontrollers.

Features:
- Supported by AVR Studio 4
- ZIF Socket for 14-pin SOIC packages
- DIP Socket for 20-pin PDIP packages
- Support for High/Low Voltage Programming with STK500
- Switch to select different clock sources
- Switch to select between reset and I/O functionality for the reset pin
- On board crystal sockets

STK520 Expansion Board

The STK520 board is a top module designed to add AT90PWM family support to the STK500 development board from Atmel (Order Code: 388-4429). The STK520 includes connectors and hardware allowing full utilisation of the features of the AT90PWM, while the Zero Insertion Force (ZIF) socket facilitates the use of SO24 and SO32 packages for prototyping.

Features:
- Supports the AT90PWM2 and AT90PWM3
- DAIL Hardware Interface
- Supported by AVR Studio 4
- High Voltage Parallel Programming
- Serial Programming
- JTAG MKII connector
- Potentiometer for Demo Applications

AVR STK525 Starter Kit

The STK525 Starter Kit is dedicated to the AT90USBxxx AVR microcontroller. This board is designed for the evaluation of the product using demonstration software. To complement the evaluation and enable additional development capability, the STK525 can be plugged into the Atmel STK500 Starter Kit Board (Order Code: 388-4429) in order to use the AT90USBxxx with advanced features such as variable VCC, variable VRef, variable XTAL, etc.This stand-alone board has numerous onboard resources such as USB, RS232, joystick, data-flash, microphone and temperature sensor

Features:
- Supports AT90USBxxx TQFP devices
- AVR Studio software interface
- USB software interface for Device Firmware Upgrade
- Power supply options: external power connector, USB interface or from STK500
- ISP connector
- JTAG connector for debugging/ on-chip ISP
- 1 USB full/low speed device/host interface
- RS-232C ports with RTS/CTS handshake lines
- On-board RESET button
- On-board HWB button for force bootloader section execution at reset
- Numerous access points for test

ATEVK525 - USB Mass Storage Add-On

The EVK525 is an add-on for the STK525 that allows a user to evaluate alternative mass storage media. It includes a NAND Flash of 256Mbytes and the possibility to add other Flash circuits. It also has a receptacle for SD/MMC cards.

This evaluation board has been designed to be plugged into the Atmel STK525 Starter Kit Board to add mass storage capability to an existing development board. It will also combine them with other features such as USB, RS232, Microphone and all AVRdevelopment tools.

Features Include:
- NAND Flash (Micron MT29F2G08AACWP)
- Reserved location additional NAND Flash module plug-in
- Receptacle for SD and MMC memory cards
- LED signalling for Read/Write operations
- Numerous access points for debug

STK526 - AT90USB82/162 Starter Kit

This starter kit is dedicated to the AT90USB82/162 microcontrollers and is designed to allow easy evaluation of the microcontollers using demonstration software.
To enable additional development capability, the STK526 can be plugged into the Atmel STK500 Starter Kit Board.

Features Include:
- AT90USB82/162 TQFP device
- AVR Studio® software interface
- USB software interface for device firmware upgrades
- STK500 compatible
- Power supply flagged by POWER-ON LED
- ISP connector
- On-board RESET button

Flowcode V3 for AVR and E-Blocks Bundle

This bundle solution is perfect for low cost entry into AVR development and is great for students who want to continue their studies at home, and for engineers who need to develop prototypes of electronic systems quickly. The pack is fully compatible with the range of E-block accessories. Datasheets on each individual item are available separately.

Kit Includes:
- Flowcode 3 for AVR
- LED E-Block (8 leds)
- Switch E-block (8 switches)
- LCD E-block (2 line 16 character)
- E-blocks AVR board with AVRISPmk2 programmer
- USB cable
- Power supply

E-blocks™ Atmel AVR® Microcontroller Programmer EB194

The AVR Multiprogrammer includes everything you need to both program a AVR microcontrollers as well as to develop AVR projects. This product contains several items: a CD ROM containing development tools, an in-system programmer and an E-blocks AVR board. The ISP programmer connects to your USB port and to the board which is compatible with 20 and 40 pin AVR devices. The board supplies 4 full E-blocks ports and all pins are available on a 40 pin header. The CD ROM includes a range of development tools including an Integrated Development Environment for code writing in assembly and debugging, and the ISP programming software. A free GNU C compiler can be added to the IDE for those wanting to write programs in C.

- A complete AVR development solution
- Programs and executes AVR code via USB
- Includes full IDE - free GNU C compiler available
- E-blocks compatible
- Supports a wide range of devices

AVR CDROM & course ELCVR

This new CD ROM on C programming for AVR is designed for those who want to learn how to program embedded microcontrollers in C. The CD contains a full course as well as all the software tools needed to create hex code for a range of AVR ATmega devices - including a full C compiler and an Integrated Development Environment (IDE). The CD ROM makes extensive use of a virtual C microcontroller which uses code simulation to explain how C works: students can step through programs to see the effects of each line of code on the microcontroller. This product is designed to work seamlessly with our E-blocks AVR Multiprogrammer, but will also operate with third party programmers. Written by David and Rob Miles of Durham and Hull Universities.

- A full course in C programming
- Includes C compiler and IDE
- Includes virtual Atmega microcontroller simulations
- Links to E-blocks AVR multiprogrammer

AT89STK-11 Starter Kit

The AT89STK-11 Starter Kit is dedicated to the In-System Programmable standard Flash C51 microcontrollers. The board has been designed to allow an easy evaluation of the product.

Features:

- Stand-alone Board
- In-System Programmable
- On-board Voltage Regulator
- Microcontroler on its sockets
- - PLCC44-pin package
- On-board 3V or 5V power supply circuitry
- - from an external power connector
- - from an external battery
- On-board RESET
- Leds : Power, ALE, RS232 Rx and Tx
- External MCU clock connector
- External PCA clock connector
- TWI, SPI and RS232 connectors
- INT0 & INT1 Push-button
- Expansion area with prototyping facilities
- Commercial Temperature Range: 0 to +70°C Operating Temperature
- Dimensions: 95 mm x 120 mm

Epsilon5 Portable ISP Programmer MK2

Features:

- High speed development programmer for the 8051 & AVR Flash Microcontroller
- Supprts Atmel, Philips & Zensys
- Ideal programmer for development, field service and production applications
- Supports programming of FLASH, EEPROM, FUSE bits, Security bits and RC Oscillator Calibration bytes
- On board 2Mbits non-volalite Flash memory
- The programmer can be PC controlled or used in standalone mode
- All the popular ISP headers are catered for including the new JTAG ISP Port required for fast programming of the ATmega family

Kit Contents:

- The Epsilon5 programmer MK2 with 2 internal jumper
- A power lead included, requires 3.1-5V DC supply
- A 9 way male/female serial cable
- 25/9 way serial adaptor
- 10 way IDC ribbon cable
- Utility Tool CDROM software
- A user manual

FS2003 Portable ISP Programmer

Kit Contents:

- The FS2003 programmer with 2 jumper links
- An external DC universal (UN) PSU 9V @ 300mA
- A power lead with a jack at one & bare wires at the other
- A 9 way male/female serial cable
- 25/9 way serial adaptor
- 10 & 6 way IDC ribbon cable
- Utility Tool CDROM software
- A user manual

Features:

- Portable In-System (ISP) Programmer
- Ideal for development, Production or Field use
- Supports ISP of Atmel 8051 and AVR FLASH Microcontrollers
- Supports ISP of Philips P89C51Rx2 and P89C66x FLASH Microcontrollers
- Supports 'Standalone' operation i.e. no PC required after programmer has been configured
- Very fast programming speeds suitable for high-throughput production environments
- Up to 64 individual Programming Projects can be uploaded to the non-volatile On-board FLASH Store (4Mbytes).
- Individually configurable programmer I/O pins
- Programmable frequency generator output on SCK2 pin - supports external clocking of ATmega, and ATtiny AVR devices to speed up programming
- Programmer firmware is field upgradeable to cater for future algorithms
- CE / FCC approved product

Microcontrollers and Microprocessors - 8-Bit - ATMEL - continued

BC100 Battery Charger Reference Design Kit

Features Include:
- A tripple buck converter for battery charging
- Battery charging and discharging using ATtiny261/461/861 or ATtiny25/45/85
- ATmega644 host controller

This reference design kit demonstrates the charging and discharging of two batteries/battery packs with a programmable charge voltage up to 40V.
The kit can be used to charge various battery types, as long as the requirements to charging voltages and currents are within the output range that the kit offers. The kit can be used to develop applications such as battery chargers, battery backups, Un-interruptable power supplies and switch mode power supplies.

ATAVRFBKIT - Dimmable Fluorescent Ballast

This dimmable fluorescent ballast kit demonstrates the ability of the AT90PWM2 to control all the main functions of a DALI Fluorescent Ballast.

Features Include:
- Automatic microcontroller dimmable ballast
- Power Factor Corrected (PFC) boost regulator
- Variable frequency half bridge inverter
- Automatic dimmable single lamp operation
- Automatic detection of Swiss or DALI
- Very versatile power saving options
- Universal input
- 18 W
- Power feedback

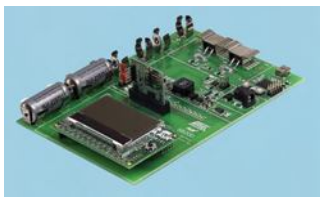
ATAVRMC200 - AC Motor Control Evalutation Kit



This evaluation kit is dedicated to evaluating asynchronous AC motor control and also allows the evaluation of BLDC motors using the AT90PWM3/3B AVR microcontroller. The kit uses various sensors for regulation and will support motors rated from 110V to 230V.

Features Include:
- AT90PWM3-16SQ SO32 device
- Power bridge for AC induction Motors
- Embedded AC/DC power supply
- Hardware temperature detection
- Hardware overcurrent detection
- On-board Voltage Regulator
- AVR Studio ® Software Interface
- Power-supply flagged by Green LED
- ISP connector for Debug Wire
- Opto-isolated ISP connect
- Opto-isolated UART interface
- System Clock
- Three opto-isolated inputs
- Power supply EMC filtering

ATAVRSB200 Development Board

This development board provides a platform for SB20x reference designs. This offers an easy way to start the evaluation and development of smart battery applications using the ATmega16HVA and ATmega8HVA microcontollers.

Features Include:
- Safe use of the SB200 and Li-Ion batteries
- Data logging
- Trouble shooting

AT90USBKey Demonstration Board

The AT90USBKey demonstration board is based on the AT90USB1287 microcontroller. It allows the quick evaluation of AVR microcontrollers and the AT90USB family. The key simply connects to the USB port of a personal computer to retrieve on-board documentation and run AVR programs. Designers can either run demonstration programs or their own application. It also allows hardware developments by giving access to the JTAG port and all the IOs of the microcontroller. An external power supply can be used for USB host or stand-alone operation.

ATDVK90CAN1 Development Kit

This stand alone development kit is designed to allow easy evaluation of the AT90CAN products using reference software. To complement evaluation and enable additional development, the board can also be plugged into the STK500 starter-kit. The ATDVK90CAN1 board has numerous serial interfaces (dual RS232, CAN, LIN, SPI & TWI) and resources (Keyboard, LEDs, voltage reading, light and temperature sensors and speaker).

Jade ATMEGA128 Test Board

The Jade ATMEGA128 test board is designed to aid the development of products using the ATMEGA series of microcontrollers from ATMEL. The board is based on an ATMEGA128 MCU (running at 4MHz), with all connections brought out to 8 way connectors. A 10 way IDC is included to directly interface to a JTAG emulator/programmer (not supplied). The board is powered via an external DC power supply (not supplied). The board also has an integral 5-volt linear regulator and LED DC on indicator.

ATMEGA128 Features:
- 128Kbyte of programme flash, 4Kbyte EEPROM
- Onboard oscillator, however there is a 4MHz crystal supplied
- 5 off 8 bit input/output ports, 1 off 5 bit port, 1 off 4 bit port

Port Features:
- 2 Serial UARTS
- 1 SPI port
- 2 PWM channels
- 8 off 10 bit A/D converter
- 1 off comparator

AVR Butterfly Evaluation Kit

The AVR Butterfly evaluation Kit is designed to demonstrate the benefits and key features of the AVR microconrollers. It is a stand alone microprocessor module that can be used in numerous applications without need for an external hardware for reprogramming the AVR Butterfly. It also serves as a development kit for the ATmega169.

Features include:

- ATmega169 MLF package
- 120 segment LCD display
- Joystick, 4 directions with centre push as user input
- Piezo element for sound and 32KHz Xtal for the RTC
- RS-232 level converter for communicating with off board units
- NTC for temperature measurement and LDR for light
- JTAG emulation for debugging
- supported by AVR Studio 4.

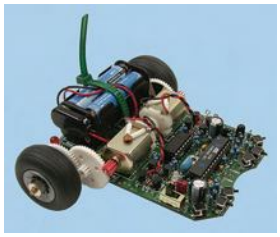
AVRDRAGON Emulator and Progammer



The AVR Dragon is a in-circuit emulator for AVR devices with 32KB or less Flash memory. It also supports programming modes for these and larger AVR devices, including in-system programming, high voltage serial programming, parallel programming and JTAG programming. Front-end software for the AVR Dragon is provided within AVR Studio. Host connection is via a USB interface.

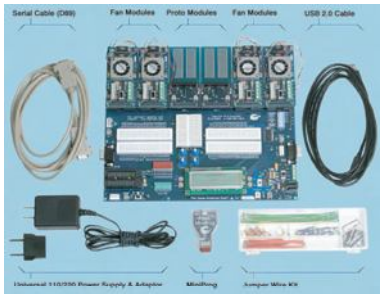
Mobile Robot — AREXX

High-tech "ASURO" build it yourself Mobile Robot

ASURO is a small, mobile robot which has been developed for training and teaching purposes that can be programmed as required in C.
Construction is simple for experienced electronic technicians, and can even be carried out by those starting to learn electronics. With the exception of the PCBs, only commercially available components are used, which drive easily obtainable normal fine motors.
Programming is easy, using Freeware tools. ASURO is suitable for those who want to start using processor-controlled circuits, for student projects, for further and higher education courses.

- Driven by two electric motors
- ASURO uses two phototransistors to record the background brightness, and thus determine the direction.
- Six sensor keys help ASURO to identify and circumvent obstructions.
- The infrared transceiver allows a data link to be formed between ASURO and a PC. (requires USB link adaptor - to be ordered separately)

Further Accessories:



- ASURO Extension boards: contains 2 experimental boards, 1 connector kit for Asuro motherboard, 2 connector kits for experimental boards and one ceramic capacitor

PSoC Development and Evaluation Kits

CY3210-EXPRESSDK

CY3210-MINIPROG1

CY3210-PSOCEVAL1

CY3210-EXPRESSDK

The Express Development Kit provides a feature-rich hardware platform to implement PSoC Express Designs. The kit includes an extensive development board that provides an intuitive platform for implementing PSoC Express Designs ranging from the simple to the complex.

Kit Includes:

- PSoC Express Software CD-ROM
- Express Development Board
- 4 x Fan Modules
- 2 x Proto Modules
- MiniProg In-System Serial Programmer
- MiniEval PCB Evaluation Board
- Jumper Wire Kit
- USB 2.0 Cable
- Serial Cable (DB9)
- 110 ~ 240V Power Supply, Euro-Plug Adapter
- 2 x CY8C24423A-24PXI 28-PDIP Chip Samples
- 2 x CY8C27443-24PXI 28-PDIP Chip Samples
- 2 x CY8C29466-24PXI 28-PDIP Chip Samples

CY3210-MINIPROG1

This evaluation kit allows the user to program PSoC devices via the MiniProg programming unit. The MiniEval PCB is a programming and evaluation board that allows socket programming of DIP devices.

Kit Includes:

- MiniProg Programming Unit
- MiniEval Socket Programming and Evaluation board
- 28 Pin CY8C29466-24PXI PDIP PSoC Device Sample
- PSoC Designer Software CD
- Getting Started Guide
- USB 2.0 Cable

CY3210-PSOCEVAL1

This PSoC Evaluation Kit features an evaluation board and MiniProg programming unit. The MiniProg programming unit will program PSoC devices directly on the evaluation board, or on other boards via a 5-pin header.

Kit Includes:

- Evaluation Board with LCD Module
- MiniProg Programming Unit
- PSoC Designer Software CD
- 28 Pin CY8C29466-24PXI PDIP PSoC Device Sample
- USB 2.0 Cable
- Getting Started Guide

PSoC Mixed Signal Controllers

The PSoC™ family consists of many Mixed-Signal Array with On-Chip Controller devices. These devices are designed to replace multiple traditional MCU-based system components with one, low cost single-chip programmable component. A PSoC device includes configurable blocks of analog and digital logic, as well as programmable interconnect. This architecture allows the user to create customized peripheral configurations, to match the requirements of each individual application. Additionally, a fast CPU, Flash program memory, SRAM data memory, and configurable IO are included in a range of convenient pinouts.

Features:

- Powerful Harvard Architecture Processor
- Advanced Peripherals (PSoC Blocks)
- Flexible On-Chip Memory
- Complete Development Tools
- Precision, Programmable Clocking
- Programmable Pin Configurations
- Additional System Resources

CY8CLED EZ-Colour(TM) HB LED Controller

CY8CLED04/16

- HB LED Controller
- Visual Embedded Design, PSoC Express
- PrISM Modulation Technology
- Advanced Peripherals (PSoC Blocks)
- Complete Development Tools
- Programmable Pin Configurations
- Flexible On-Chip Memory
- CY8CLED04 Full-Speed USB (12 Mbps)
- CY8CLED16 Powerful Harvard Architecture Processor

Cypress' EZ-Color family of devices offers the ideal control solution for High Brightness LED applications requiring intelligent dimming control. EZ-Color devices combine the power and flexibility of PSoC (Programmable System-on-Chip(TM)); with Cypress' PrISM (precise illumination signal modulation) modulation technology providing lighting designers a fully customizable and integrated lighting solution platform.
The EZ-Color family support up to 16 independent LED channels with up to 32 bits of resolution per channel, enabling lighting designers the flexibility to choose the LED array size and color quality. PSoC Express software, with lighting specific drivers, can significantly cut development time and simplify implementation of fixed color points through temperature and LED binning compensation. EZ-Color's virtually limitless analog and digital customization allow for simple integration of features in addition to intelligent lighting, such as CapSense, Battery Charging, Image Stabilization, and Motor Control during the development process.

CY3261A-RGB EZ-Colour Evaluation Kit

The CY3261A-RGB board is a pre-programmed HB LED colour mix board with seven pre-set colours using the CY8CLED16 EZ-Colour HB LED Controller. The board is accompanied by a CD containing the colour selector software application, PSoC Express(TM) v. 3.0 Beta 2, PSoC Programmer, and a suite of documents, schematics, and firmware examples. The colour selector software application can be installed on a host PC and used to control the EZ-Color HB LED Controller using the included USB cable. The application enables you to select colours via a CIE 1931 chart or by entering coordinates.

CY3207ISSP In-System Serial Programmer

The In-System Serial Programming (ISSP) programmer programs PSoC ICs with HEX files created with Cypress' PSoC Designer™ software. The programmer programs a PSoC chip mounted on your PCB, one at a time. It connects to yourPCB with a 5-wire cable and to your PC with a USB cable. Programming operation can be automated by incorporating the programmer into a PC-based test system. The tester software communicates with the programmer-control software through a command line interface. The ISSP programmer can also be operated manually using the supplied Windows ® GUI software.

Kit Contents

- The ISSP Programmer
- ISSP Software CD-ROM
- USB Cable & Programming Cable
- 9-Volt Power Supply

CY3202-C Developer Kits

The PSoC Designer C Compiler compiles each .c source file to a PSoC device assembly file. The PSoC Designer Assembler then translates each assembly file (either those produced by the compiler or those that have been added) into a relocatable object file, .o. After all the files have been translated into object files, the linker combines them together to form an executable file. This .hex file is then downloaded to the emulator where it is debugged to perfect design functionality.

Features

- ANSI C compiler
- Inline assembly and interface with assembly modules
- Modern stack-based architecture
- 7 basic data types, including IEEE 32-bit floating point
- Assembler and linker
- Math and string libraries
- C Interrupt Service Routines
- Librarian

RS08KA8 Demonstration Board

This demonstration board can be used to demonstrate, debug and evaluate the RS08KA8 microcontroller. The board's built-in circuitry and USB programmer interface will reduce hardware interface development time and also allow faster code evaluation.

Features Include:

- MC9RS08KA8 microcontroller
- Built-in USB-to-BDM
- An RS-232 transceiver
- A provision for a low-frequency crystal
- 12 V DC input connector
- USB connector
- 3 Push Switches; 2 User, 1 Reset
- 3 LED Indicators; 2 User, 1 VDD
- 1 Potentiometer
- 1 Photocell; Jumper Selector

DEMO9RS08KA2 Development Board

The cost effective KA2's demoboard supports the RS08 architecture. Simply connect, load and evaluate. The DEMO9RS08KA2 board's built-in circuitry and USB programmer interface included reduces hardware interface development time and allows faster code evaluation. It supports the MCRS08KA2 microcontroller, a general-purpose 8-bit device for the ultra low-end market.

Features
- 8pin Dip RS08KA2 microcontroller
- GPIO header connector 4x2 pin
- Built in USB BDM interface
- 4 LED circuitry connections: 3user, 1 VDD
- 2 Push Switches circuitry: 1user, 1 Reset
- BDM header connector

Kit Contents
- DEMO9RS08KA2 Board
- CodeWarriorTM Development Studio and Service pack CDs
- USB Cable, Quick Start Guide, User Manual, Packing List
- 3 additional samples of 8-pin PDIP 9RS08KA2 microcontroller

USB mini board for Low-End 8-bit Microcontrollers

To aid fast and easy development for embedded systems engineers working on our low-end microcontrollers, Freescale has developed the low-cost, high-performance USB debug tool - the USBSPYDER08.
With the USBSPYDER08 you can, SPY into your application software, DEBUG 8 leg 8-bit microcontrollers before you have your application board, KILL bugs in your application software. This complete package delivers a low cost, yet powerful way to develop your products and speed time to market.

Features:

Small
- Targeted for small 8pin 8bit microcontrollers
- Dimensions: 25mm x 15mm x 75 mm

Simple
Basic Hardware interfaces included:
- USB to BDM built-in circuitry - Allows communication between Host PC and target microcontroller
- 8-pin socket for the 8-bit device - Supports QG, QD and KA 8-pin microcontrollers
- Header connector - Allows easy access to MCU GPIOs
- BDM header connector - Allows the use of the USBSPYDER kit as a BDM interface to program or debug external QG, QD or KA devices

Complete
- Development environment completed with CodeWarrior Software package and Supporting Information

Flexis™ MC9S08AC128 Demonstration Board

This demonstration kit provides a platform for supporting the demonstration and evaluation of the Flexis™ MC9S08AC128 microcontroller.
The target microcontroller mounts on a plug-in module to allow the quick changing of the target MCUs. Application development is quick and easy with the board's integrated USB-BDM, sample software tools, BDM_PORT port and examples.

Features Include:
- Integrated, USB BDM
- Power Input Select Option Header
- On-board 5V regulator
- Power from USB BDM
- Optional Power Sourced to Connector J1
- 4MHz XTAL Oscillator
- 3-axis accelerometer
- LEDs - 4 User, 1 Power, 1 Reset
- Push button switches - 4 user, 1 Reset
- 5K ohm POT
- Jumpers
- MCU PORT

DEMO9S08AC60E: Demo Board for S08AC

The DEMO9S08AC60 is a demonstration board for the S08AC microcontroller family. Development of application code is quick and easy with the integrated USB-to-BDM interface, CodeWarrior™ Development Studio, and software examples. A 40-pin connector allows connecting the DEMO9S08AC60 board to an expanded evaluation environment simple and easy. Other features like the 10 LED, 8 DIP switches, Freescale XYZ-axis low g acceleration sensor, and ZIF socket set makes it an ideal design platform for the S08AC microcontrollers.

Features
- MC9S08AC60 MCU
- Socketed 64 pin QFP package
- Power and communication through the integrated USB-BDM cable
- External power jack for optional DC power supply (+7 to +12 VDC)
- 40 Pin expansion connector
- Four push-button user switches
- Ten LED light bar with 8 connected to I/O port (2 user assignable)
- Eight port rocker switch connected to I/O port
- All I/O pins can be disconnected from demo board for alternate use
- Master reset switch
- Freescale MMA6260Q Accelerometer
- On-board visible light sensor
- Potentiometer connected to the ADC
- On-board RS-232 serial port
- 4.5" x 3.5" board size

DEMO9S08AW60E Demonstration Board

The DEMO9S08AW60E is a demonstration board for the MC9S08AW60 microcontroller. The integrated USB-to-BDM interface, CodeWarrior™ Development Studio, and software examples all aid the development of application code.

Kit Contents
- DEMO9S08AW60E Board
- CodeWarriorTM Development Studio CD with Service Pack CD
- Quick Start Guide and User Manual
- Resource CD

Features
- MC9S08AW60 microcontroller in socketed 64 pin LQFP package
- Power and communication through the integrated USB-BDM cable
- External power jack for optptional DC power supply (+7 to +12 VDC)
- 40 Pin expansion connector
- Four push-button user switches
- Ten LED light bar with 8 connected to I/O port (2 user assignable)
- Eight port rocker switch connected to I/O port
- Freescale MMA6260Q Accelerometer
- On-board visible light sensor
- Potentiometer connected to the ADC
- On-board RS-232 serial port

EVB9S08DZ60 Evaluation Board

New

This evaluation board can be used to debug and evaluate the MC9S08DZ60 microcontroller. A user can program and debug advance application code using the board's expanded I/O functions, peripherals and large prototype area. The kit can be used as a standalone application, or via its built-in USB-to-BDM interface.

Features Include:
- Clock module
- BDM connector
- Four header connections with all MCU signals
- 12 V DC connector
- Two banana input connectors
- Built-in USB to BDM Interface
- Reset push-button
- Two potentiometers
- CAN section
- LIN section
- RS-232 section
- Serial settings section
- Prototype area

MC9S08LC60 Demonstration Board

The DEMO9S08LC60 demonstration kit contains everything a designer needs to develop and evaluate application code. The integrated USB multilink allows the user to communicate with the board and target device with only a USB cable.

Main Board Component Features:
- MC9S08LC60 in 80 pin LQFP package
- 32.768 Crystal
- Built in BDM
- RS-232
- Power via USB or 12V DC input

Integrated Inputs:
- 4 buttons
- Potentiometer
- NTC-Based Temperature Sensor
- Photocell
- Accelerometer - Freescale MMA7260Q
- Board integrated Outputs:
- 8 high efficiency LEDs
- Piezoelectric Speaker
- Custom 3V LCD

Kit Contains:
- DEMO9S08LC60 Board
- CodeWarriorTM Development Studio CD
- CodeWarriorTM Service pack CD
- USB Cable
- Quick Start Guide
- User Manual

DEMOQE8: QE8 Demonstration board

DEMO9S08QE8 is a cost-effective board targeting quick micro-controller evaluation.

New

In combination, they can be used to highlight the key features on the MC9S08QE8 device. The board also includes a power terminal to measure the ultra-low power consumption of the MC9S08QE8 device.

Base board features
- 3-axis Accelerometer w/ Enable
- 8 LEDS w/ enable
- 4 User Push Buttons w/ Enable
- 1 Piezzo Buzzer w/ Enable
- 1 RS-232 Serial Port w/ DB9-F Connector
- 10K Ohm POT w/ Enable
- ON/OFF Power Switch w/ LED indicator
- RESET Push Button and LED indicator w/ Enable
- Power options:

- 5VDC to 12VDC Power Jack (2.5/5.5mm barrel connector)
- USB Cable: 5VDC, 500mA max
- 2 AAA Battery Cells Selectable (regulated VDD Output at 3.0V or 2.1V)
- P&E micro Embedded Multilink USB Connector

- USB to SCI communication interface eliminates need for serial COM port on PC
- Two channel logic analyzer allows observation of MCU signals

Kit Contents
- DEMOQE Base Board with a MC9S08QE8 Daughter Card installed
- 2-cell AAA battery package
- USB Cable
- Quick Start Guide

DC9S08QE8 Daughter Card features
- An MC9S08QE8CLC chip
- Four 8x2 female connectors to mate with DEMOQE8 base board, also compatible with the DEMOQE128 kit.

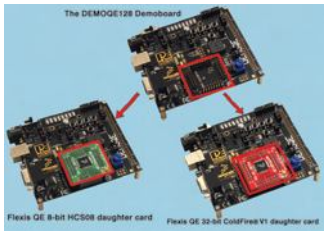
EVBQE128 Evaluation Board

The EVBQE128 Evaluation Board has been designed for the evaluation, demonstration and debugging of the Freescale Flexis QE128 Microcontrollers (MC9S08QE128 and MCF51QE128). The EVBQE128 can be used as a standalone application or can be controlled by a host PC via its built-in microDART™ interface.

Features
- Crystal Oscillator
- DBM Connector for in-circuit Debugging/Programming with an External Instrument
- 12VDC Barrel Input Connector (2.1mm)
- Jumper to Select Power Supply Source (USB or Barrel Connector)
- Power On/Off Switch
- One Potentiometer
- Reset & Four Additional Push Buttons
- Eight DIP-Switches
- Light & Temperature Sensors
- Ten User LEDs
- RS232 Section Containing Jumpers for Communication Options



Kit Contents
- The EVBQE128 Evaluation Board
- 80-Pin LQFP MC9S08QE128 & MCF51QE128 Microcontrollers
- Pick-Up Vacuum Pump
- Universal 12VDC Power Supply
- USB Cable
- System Software DVD, Including CodeWarrior™ Development Studio
- Quick-Start Guide

Supported Devices:
- MC9S08QE128
- MCF51QE128

DEMOQE128 Demonstration Board

The DEMOQE128 is a low cost development system designed for demonstrating, evaluating and debugging the Freescale MC9S08QE128 and MCF51QE128 microcontrollers. P&E's Embedded Multilink circuitry on the DEMOQE128 board allows the processor on the DEMOQE128 to be debugged and programmed via USB from the PC. In addition, the demo board can be powered using the USB bus.

The DEMOQE128 supports the MC9S08QE128CLH, MCF51QE128CLH devices.

Features
- On-Board Logic Analyser
- On-Board Virtual Serial Port
- RS-232 Serial Port w/ DB9-F Connector
- On/Off Power Switch w/ LED Indicator
- 5VDC to 12VDC Power Supply Input Barrel Connector
- Power Input Selection Jumpers for Selecting Input Voltage Source

Kit Contents
- DEMOQE Base Board with a MC9S08QE 128 Daughter Card Installed
- MCF51QE128 Daughter Card
- Breaking Bit Boundaries DVD - Getting Started with QE128

908QT Evaluation Board

The kit contains the following components:
- MC68HC908QT4 Microcontroller
- MON08 Debugging Interface
- Push-button and analogue input and LED output
- Space for optional 9.8MHz external crystal, LEDs, etc
- CodeWarrior Development Studio for HC08 Special Edition
- Example software and "Get Started" Instructions

Requires a 9V Battery and 9-pin RS232 serial cable (not supplied)

The 908QT Evaluation Board contains everything needed to begin code development with Freescale's newest and lowest cost Flash MCU derivatives. It is supplied complete with CodeWarrior Development Suite for HC08 Special Edition from Metrowerks and allows code to be developed in assembler or "C", real-time source-level debugging of your code and programming of the device's Flash memory. The CodeWarrior software also allows the internal RC oscillator on the 908QT and 908QY devices to be automatically trimmed while Flash programming.

HC08 8-bit Microcontroller Family

These devices are part of Freescale's M68HC08 family of 8-bit microcontrollers and are based on the enhanced M68HC08 Central Processor Unit (CPU08). The family ranges from basic bare-bone controllers to feature-rich MCUs, all of which can flaunt an impressive array of peripherals.

Features Include:
- Byte Erasable EEPROM Memory
- Expanded Bus Memory Interfaces
- Serial Peripheral Interface (SPI)
- SCI, ESCI, SLIC
- 8 or 10-bit Analog to Digital Converters (ADC)
- Support for CANs and LINs
- Multichannel timers
- Industry-leading in-circuit reprogrammable FLASH
- Application specific devices for LIN, motor control, and RF

RS08 8-bit Microcontroller Family

These devices are part of Freescale's MC9RS09 family of 8-bit microcontrollers and are based on the popular S08 Central Processor Unit (CPU08).

Features Include:

- Up to 2 KB third-generation FLASH
- 8-bit modulo timer
- Real-time interrupt trigger
- Background debugging system
- Flexible clock options
- Analog comparator
- System protection, including LVD

HCS08 8-bit Microcontroller Family

These devices are part of Freescale's M9HCS08 family of 8-bit microcontrollers and are based on the enhanced M9HCS08 Central Processor Unit. The M9HCS08 family combines high-performance levels with a low power operation of 1.8 V.

New

HCS08 - Flexis™ AC Series

These devices are part of the Flexis™ series of microcontrollers that deliver the reality of 8-bit to 32-bit compatability. The Flexis™ series includes complimentary families of microcontrollers that have a common set of peripherals and development tools to deliver the ultimate in migration flexibility.

Features Include:

- HCS08 CPU Core
- Background Debug System
- Integrated Third-Generation FLASH Memory
- Internal Clock Generator
- 10-bit Analog-to-Digital Converter (ADC)
- Up to 3 Timers/PWM
- Extensive Serial Communications
- System Protection
- Keyboard Interrupt (KBI)
- Additional Independent 1kHz Clock Source
- Cyclic Redundancy Check (CRC)
- Up to 56 GPIOs

HCS08 - GB and GT Series

freescale semiconductor

Features Include:

- HCS08 CPU Core
- Background Debug System
- On-chip programmable FLASH Memory
- Internal Clock Generator
- 8-bit or 10-bit Analog-to-Digital Converter (ADC)
- 3 channel and 5 channel timers, with PWM
- Extensive Serial Communications
- System Protection
- Up to 56 Input/Output (I/O) Lines

524836

HCS08 - Flexis™ JM Series

freescale semiconductor

New

These devices are part of the Flexis™ series of microcontrollers that deliver the reality of 8-bit to 32-bit compatability. The Flexis™ series includes complimentary families of microcontrollers that have a common set of peripherals and development tools to deliver the ultimate in migration flexibility.

Features Include:

- HCS08 CPU Core
- Background Debug System
- Integrated Third-Generation FLASH Memory
- Internal Clock Generator
- 12-bit Analog-to-Digital Converter (ADC)
- 2 Timers/PWM
- Extensive Serial Communications
- System Protection
- Keyboard Interrupt (KBI)
- Up to 51 GPIOs
- USB 2.0 full-speed device

RL Re-reeling available

Farnell

HCS08 - LC Series

Features Include:
- HCS08 CPU Core
- Background Debug System
- Dual on-chip in-circuit programmable FLASH
- Internal Clock Generator
- Power-saving options
- 12-bit Analog-to-Digital Converter (ADC)
- LCD compatible
- 1 Timer/PWM
- Extensive Serial Communications
- System Protection
- Up to 24 Input/Output (I/O) Lines

HCS08 - Flexis™ QE Series

These devices are part of the Flexis™ series of microcontrollers that deliver the reality of 8-bit to 32-bit compatability. The Flexis™ series includes complimentary families of microcontrollers that have a common set of peripherals and development tools to deliver the ultimate in migration flexibility.

New

Features Include:
- HCS08 CPU Core
- Background Debug System
- Integrated Third-Generation FLASH Memory
- Internal Clock Generator
- Loop-control oscillator
- 12-bit Analog-to-Digital Converter (ADC)
- Up to 2 Timers/PWM
- Extensive Serial Communications
- System Protection
- Keyboard Interrupt (KBI)
- Up to 70 GPIOs

F²MC-8FX Emulation System

New

The F²MC-8FX emulation system consists of the MCU emulator, MCU board and either the MCU evaluation board or the MCU header board and user target system.
The evaluation board is used as an emulator target board for the MB2146-09 emulator.
The MB2146-303A-E is an MCU board, onto which an F²MC-8FX MCU can be mounted for evaluation.
The header boards are used to connect the F²MC-8FX MCU board to a user system with 30-pin SSOP, 52-pin LQFP, 64-pin LQFP, 100-pin QFP package types.

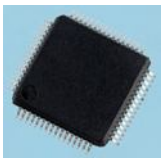
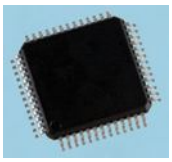
F²MC-8FX Series Emulator

New



Features Include:
- USB communication interface
- 256 code / 2 data event breakpoints
- Connected to target system via BGM user interface connector
- Sequential breakpoints (2 levels)
- Trace function



The MB2146-09 emulator for F²MC-8FX series of microcontrollers offers the ability to emulate microcontrollers operating at a voltage starting at 2.7V. In addtion the emulator supports sophisticated debugging features including, multi-level breakpoints, bit-level event trigger capabilities and high level language support.

F²MC-8FX Family - MB951xx Series 8-Bit Microcontrollers

This F_2MC-8FX familiy of 8-bit Flexible Microcontrollers, deliver a rich set of on-chip peripheral resources combined with a high-performance CPU core suitable to cover a variety of applications. The wide product line features FLASH/ROM/RAM variations, general-purpose basic resources, and enhanced application-specific resources with reinforced functions.

Features include:
- F_2MC-8FX CPU core
- Low-power consumption (standby) mode
- Programmable input voltage levels of port
  -Automotive input level / CMOS input level / hysteresis input level
- Flash memory security function
  -Protects the content of Flash memory (Flash memory devices only)

SK-XC866 Easy Kit

Features:
- Interfaces: RS232 port, 2 x CAN, LIN, JTAG connector, motor control connector and SBC board connector
- Potentiometer and 8 LEDs
- Comprehensive documentation

The SK-XC866 Easy Kit provides users with a complete development platform that includes all hardware and software tools to develop and debug designs based on the XC866 microcontroller.
The kit includes evaluation versions of the iVision3 Keil software and the Hitex HiTOP5 IDE. Both take advantage of the MCU's embedded in-circuit emulator and JTAG interface to support advanced debugging features, including single stepping, program tracing and advanced breakpoints. Infineon's DAvE (Digital Application virtual Engineer) software provides an expert wizard to automatically configure the system and kick-start application development.

XC866 High Performance 8-bit Microcontroller

The XC866 is a member of the XC800 Family of advanced 8-bit microcontrollers. They combine a high performance 8051 core with on-chip Flash and ROM memory as well as a powerful mix of peripherals. Additional key features of the XC866 family of products include support for LIN (Local Interconnected Network), an enhanced CAPCOM6E unit for flexible PWM generation and a new 10-Bit ADC with extended functionality (e.g. comparator mode). The XC866, with its extensive peripheral set is well suited to a wide range of different applications such as industrial motor control, automotive body and consumer drive.

Features
- Programmable 16-Bit Watchdog Timer (WDT)
- Power saving modes of operation
- On-chip debug support (JTAG)
- Brown-out detection for core logic supply
- Temperature range: -40°C to +125°C

C500 8-Bit Single-Chip Microcontroller

The C505CA provides full CAN version 2.0B integrated On-Chip with high performance, optimized Electro Magnetic Compatibility (EMC) behavior and fast communication between decentralized sensors, actuators and the host. The device provides 32 KByte of OTP or 16/32 KByte of ROM, 256 Byte of RAM, 1 KByte of XRAM, Controller Area Network (CAN) Version 2.0B, an asynchronous/synchronous serial interface and highly accurate 10-bit Analog to Digital Converter (ADC) integrated on chip. With an external clock rate of 20 MHz, the C505CA has an instruction time of 300 ns. Typical applications for the C505CA are automotive body and industrial control.

SAK-XC886/8 8-Bit Flash Microcontrollers

The XC886/888LM enhances the XC800 family of 8-bit μCs with a new member providing advanced motor drive capability by combining up to 32 KByte of embedded Flash with a powerful capture compare unit (CCU6) for flexible PWM generation and the new Multiplication/Division Unit (MDU) for fast mathematical computations. Additional key features include support for LIN, a highly accurate 10-bit ADC with fast conversion speed and a COrdinate Rotation Digital Computer (CORDIC) unit. The flexibility offered by the XC886/888LM embedded Flash products is also expanded to include a family of compatible ROM versions for further cost saving potential in high volume production. The XC886/888LM family offers an optimized fit to a wide range of motor control applications including automotive body,industrial motor control and consumer drive.

Low Pin Count - Do It! Demonstration Kit

NEC

The Low Pin Count - Do it! Is a demonstration kit for the NEC's 78K0S Low Pin Count microcontrollers. It supports onboard FLASH programming and real time execution of application programs up to 4 kBytes based on the 78K0S/KA1+ Low Pin Count microcontroller. The board is prepared to be connected to user hardware parts such as digital I/O or analogue signals.

Main Features:
- Easy to use device demonstration capabilities
- Powered via USB interface
- PG-LPC, FLASH programming software
- Analogue to digital signal conversion is supported
- Various input / output signals available

NEC

New

The CAN it! is a demonstration kit for the 78K0 F_Series microcontroller. It supports on-board debugging, flash programming and real time execution of application programs based on the 78K0/FF2 microcontroller.

Features Include:
- On-Board debug function
- Power supply via USB interface
- Character LCD module
- FPL3, flash programming software
- Analog to digital signal conversion is supported
- Various input / output signals available
- Full documentation

Kit Contents:
- Demonstration board
- PC connection via USB
- LCD display
- Temperature sensor
- Daughter board

NEC

New

Based on the 8-bit 78K0 core, the 8-bit 78K0/Fx2 all flash microcontrollers offer reliability, networking protocol support, real-time performance, secure self-programming, and integrated functionality for automotive body and safety applications.
These devices use SuperFlash® technology. Based on the target application, all products support the CAN and LIN protocol.

Applications:
- Automotive
- Junction boxes
- Door modules
- Lighting modules

78K0/Kx2 Series Microcontrollers

NEC

The 78K0/Kx2 Series is designed to lower the power consumption and cost through a dramatic reduction in the die size, made possible through the use of a fabrication process equivalent to 0.15 m.

Applications:
- Home Appliances
- Consumer Electronics
- Industrial Equipment
- Automotive Systems
- Lighting Systems
- Sensors

78K0/Lx3 Series Microcontrollers

NEC New

The 78K0/Lx3 microcontrollers provide a solution for applications with LCD readouts that require a low power consumption. This series of microcontrollers include LCD controllers/drivers on-chip, 16bit A/D and are easy to program.

Applications:
- Home Health Appliances
- HVAC
- Industrial Systems
- Household Appliances

78K0S Series 8-bit Microcontrollers

NEC

Features:
- On-chip programmable low voltage indicator (LVI)
- Power-on clear (POC)
- Single-voltage, self-programming flash memory
- flash memory security protection

Applications:
- Home appliances
- Sensors
- Battery chargers
- Sub-microcontrollers for general-purpose use

MCB900 Development/Evaluation Board For Philips 89LPC932

KEIL SOFTWARE UK

Keil MCB900 is a versatile and flexible evaluation board for the Philips P89LPC932. Its low price makes it ideal for student projects, CPU evaluation and general R & D. By using the industry-standard 8051 core, the P89LPC932 is programmed using the Keil µVISION2 8051 C development environment that combines source editing, compilation, in-system debugging, CPU simulation and FLASH programming into a single workbench. The on-board LED array and wire-wrap area allow easy access to the IO pins for hardware expansion.
To get started, a range of program examples are included that show how the powerful peripheral set can be used. These will build with the included 4K code-limited Keil µVISION2 8051 IDE so that the MCB900 can be up-and-running in minutes. Finished applications can then be programmed in the 8kbyte FLASH and the MCB900 becomes a dedicated controller card.

MCB900
Features:
- Keil µVISION2 industry-standard IDE for 8051 (4k CODE limit)
- LED array on Port 2 and wire-wrap area
- RS232 debugger interface
- FLASHMagic in-system FLASH programmer
- In-FLASH debugging with Keil ISD51
- Application examples
- Requires Windows 95/98/NT/ME/2K/XP and a free COM port
- Requires a suitable unregulated 9v PSU and RS232 cable

P89LPC9xx Single-Chip MCUs

NXP

The **P89LPC9xx Series** are single-chip microcontrollers in low cost 8-pin packages. The high performance processor architecture executes instructions in two to four clocks at six times the rate of standard 80C51 devices.
Many system-level functions have been incorporated in order to reduce component count, board space and system cost.

Features include:
- Program security
- Brown-out detection
- Active low reset
- Power on reset
- Watchdog timer
- Internal RC
- Vdd with 5V tolerant I/O pins (2.4V ~ 3.6V)
- LED drive capability (20mA)
- Serial Flash in-circuit programming
- Byte erasable Flash (except 89LPC932)
- Schmitt trigger port inputs
- Second data pointer
- Operating temp. (40°C to 85°C)
- Configurable on-chip oscillator with frequency range & RC oscillator options

87LPC

The 87LPC microcontroller family features include:

- C51 compatible
- 2.7V to 6V operating range
- Brownout detection
- Twice the 8051 execution time
- Two 16-bit counters/timers
- Two analogue comparators
- Full duplex UART
- I²C comms port
- Watchdog timer
- Active low reset
- Configurable oscillator
- LED drive capability
- Up to 18 I/Os

Microcontrollers and Microprocessors - 8-Bit - PARALLAX

SX Tech Tool Lite Demonstration Kit

The SX Tech Tool Kit LITE is an excellent starting point for developing SX projects with Parallax's SX-Key programming tool. The SX-Key is Parallax's primary development tool for the SX line of microcontrollers, supporting every chip that is commercially available. Using the SX-Key software, the programming tool can program SX chips in-system and perform in-circuit source-level debugging.

Kit Includes:

- SX Key Rev. F
- SX Tech Board
- 2 x SX 28AC/DP 50 MIPS Chips
- 1 x Murata 50 MHz Resonator
- 1 x Murata 4 MHz Resonator
- SX-Key Manual v2.0
- 4-pin Header
- Serial Cable

Microcontrollers and Microprocessors - 8-Bit - PARALLAX

SX Series - 8 Bit Microcontrollers

The Parallax SX Family are configurable communication controllers, with EE/FLASH Program memory and In System Programming capability. On-Chip functions include a general purpose 8-bit timer with prescaler, an analog comparator, a brownout detector, a watchdog timer, a power-save mode with wakeup capability, an internal R/C oscillator, user selectable clock modes and high current outputs.

Versa 8051 Development Kits

VERSAKIT-30XX

VERSA JTAG USB

The VersaKit 30xx and VersaKit20xx development kits are plug and play evaluation systems for the VRS51L3xxx and VRS51L2xxx MCUs, respectively. They provide a complete and comprehensive programming and development platform, with ample prototyping space an easy access to chip perippherals and I/Os.

Microcontrollers and Microprocessors - 8-Bit - RENESAS

H8/300L and H8/300 'FLASH' Microcontrollers

The low power H8/300L family and the H8/300 series microcontrollers feature the 'FLASH' on-chip programming technology. For the first time a designer can change the code within the device without having to remove it from the board. A self test programme can be loaded onto the device and once it is functionally correctly tested on the board the finished code can be loaded into the device ready for use. Fully populated Evaluation Boards with hardware/software support for evaluation of these 'FLASH' devices are available. See Order Codes 693-820 and 693-832.

Microcontrollers and Microprocessors - 8-Bit - SILICON LABS

FM RADIO USB STICK KIT

This USB FM Radio design is intended as a reference for incorporating FM radio functionality into a USB product.The design consists of two major components, the Si4701 FM radio receiver and the C8051F321 microcontroller with a built-in universal serial bus (USB) peripheral. Due to the high level of system integration of both of these components, the total design is very small with fewer external components than many other solutions.

Plug it in your PC's USB port and launch the Radio Player software to listen to your favourite radio station right on your PC.

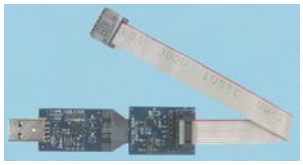
ToolStick Kit

Using only a PC with a USB port, designers can experience the Silicon Laboratories software development environment in conjunction with the on-chip debugging hardware that allows full, non-intrusive access to the C8051F mixed-signal MCUs CPU, peripherals and memory. The target microcontroller on the board is a Silicon Laboratories C8051F300 which interfaces with the PC via the integrated Silicon Laboratories USB debug adapter that uses the C8051F321 USB MCU.



Kit Includes:
- ToolStick
- Silicon Laboratories Evaluation Kit IDE and Product Information CD-ROM

CD Content Includes:
- Silicon Laboratories Integrated Development Environment (IDE)
- Keil Software 8051 Development Tools (evaluation assembler, linker and C compiler)
- Source code examples and register definition files
- Demo software
- ToolStick User's Guide

ToolsStick Adapter

ToolsStick Debug Adapter

ToolsStick Base Adapter

ToolStick Base Adapter
The ToolStick Base Adapter provides a USB debug interface and data communications path between a Windows PC and a target microcontroller. The Base Adapter is USB powered and also provides power to the daughter cards. The target microcontroller and application circuitry are located on the daughter card. The base adapter is not functional without a daughter card.

ToolStick Debug Adapter
The ToolStick debug adapter, in conjunction with a ToolStick Base Adapter, provides an interface between the PC's USB port and the target device's in-system debug/programming circuitry. The ToolStick Debug Adapter can be used to program and debug a standard Silicon Laboratories MCU development board.

USB Mass Storage Reference Design Kit

The USB Mass Storage and CF/MMC/SD Reference Design Kit includes everything necessary to implement a FAT16 file system using a SD, MMC, or CF memory card on your Silicon Labs MCU. In addition, it provides a method of interfacing that system to a host PC via USB using the Mass Storage Device class.

Kit includes:
- SD, MMC, and CF Memory Card Expansion Board
- 256 MB SD Memory Card
- 9-Pin Serial Cable
- Quick-Start Guide
- USB Mass Storage Reference Design CD-ROM

C8051F Development Tools

These development kit provides a development environment for unobtrusive real-time debug in the target system. The kist offer features and performance typically found on high-end development systems. These kits are complete with all hardware, software, cables and power supply. The user only needs a PC running Windows (95/98/Me/NT) with a free COM port.
These kits include advanced debug features enabling the user to fully develop and integrate the hardware and software design as well as built-in debug capabilities, meaning the development environment can be used with devices already installed in the end application.

Features:
- Editing & Managing Project Files
- An Evaluation C Compiler
- Configuration Wizard - writes the source code necessary to set up the peripherals
- Run, Halt, Single-Stepping and Animate
- Set Hardware Breakpoints
- Inspect/Modify Memory and Registers
- Download Program Memory

C8051F9xx Low-Voltage/Low-Power MCUs

The C8051F9xx is capable of full-spec operation down to 0.9 V and up to 3.6 V, enabling single-cell battery operation as well as increasing battery life for dual-cell applications. With an integrated dc-dc converter, the C8051F9xx has been designed to provide a fast wake-up time, low active-mode, and ultra-low sleep mode current consumptions.

Microcontrollers and Microprocessors - 8-Bit - SILICON LABS - continued

Silicon Laboratories Microcontrollers - continued

Silicon Laboratories offers a range of In-System Programmable, mixed signal System-on-Chip microcontroller products. They integrate world-class analogue peripherals, a high-speed pipelined 8051 CPU, ISP Flash Memory, and on-chip JTAG based debug in each device. Silicon Laboratories concentrates on reducing the cost of the system by integrating more functions onto a single device.

Silicon Laboratories parts offer an enhanced 8051 compatible CPU delivering up to 25 MIPS at 25 MHz. Memory options are currently up to 64K Flash with 4K RAM.System cost, development time and parts count are all reduced by integrating UART, SMBus™, and SPI™ serial interfaces, four 8051-style timers, and a five-channel programmable counter array (PCA). Some parts have a dedicated parallel interface (capable of data rates up to 5Mbytes/second) that facilitates the easy expansion of data memory, and provides the means to attach external devices such as USB or Ethernet controllers.

Analogue peripherals include 12-bit or 10-bit 100ksps ADC and an 8-bit 500ksps ADC with performance figures normally only found on monolithic ADCs. Devices also feature a temperature sensor, two 12-bit digital-to-analogue converters, voltage comparator(s), and a voltage reference.

Mftrs. List No.	MIPS (peak)	Flash Memory (bytes)	RAM (bytes)	Serial Buses	Timers (16-Bit)	Digital I/O Pins	ADC Resol. (bits)	ADC Speed (Ksps)	ADC inputs	DAC Resol. (bits)	DAC Ouputs	Voltage Comparators	Pins/ Package

Microcontrollers and Microprocessors - 8-Bit - ST

ST62 Starter Kits

The ST62 Starter Kit is a complete low cost tool providing immediate evaluation of the ST62 family. It includes the ST62 Assembler, Linker, Debugger, and WinEE programming software, plus an application/debug/programming board, power supply and samples. Application notes and example software routines are provided.

Features:
- Simulation and debugging within the user's real application environment
- In-situ programming of all ST62 devices in the appropriate sub-family
- In-socket programming of the DIL OTP and EPROM ST62 devices in the appropriate sub-family (includes QFP80 for the ST6240-Kit)
- Software simulation, including I/O read and write

ST62 Microcontroller Family

The ST62 family of low cost microcontrollers is designed for rugged and reliable operation, even in the harshest industrial or automotive applications.

A number of design features contribute to the ST62's outstanding noise immunity, and ultra-low noise generation, including:
- An internal serial architecture
- An oscillator safeguard circuit which dynamically controls the internal operating frequency of the micro
- Clamp diodes an all pins
- A watchdog, and an auxiliary oscillator ensuring safe operation even if the oscillator components fail
- Power on and power off reset circuits

This family is widely regarded as the industry's best for EMC/EMI performance.

In addition to these advanced noise immunity features, ST62 family variants offer:
- EEPROM
- LCD drive
- Analogue-to-digital converters
- High current outputs for direct connection to LEDs or triacs
- Timers with or without PWM capability
- Broad range of memory and package combinations

Devices can be programmed in-situ. *All OTP variants are supplied in Industrial Temperature range (-40°C to +85°C) as standard.*

Developers will find the ST62 easy to use, with its straightforward accumulator-based architecture, twin index pointers, and hardware stack. The ST62 also features a surprisingly powerful dual-level interrupt mechanism, ideal for managing events in real-time without messy software loops. Through its Data ROM Window construct, the ST62 is capable of reading its own program content, a vital feature for ROM checking algorithms such as CRC.

All ST62's feature WAIT and HALT low power modes, while the "C" revision devices have now been recharacterised to offer even lower power consumption.

A range of development tools is available, from low cost Starter Kits, to full in-circuit real-time emulators. Engineers with little experience, or with little time available, can draw their application schematically, using the STREALIZER-II, without having to write a single line of assembly code.

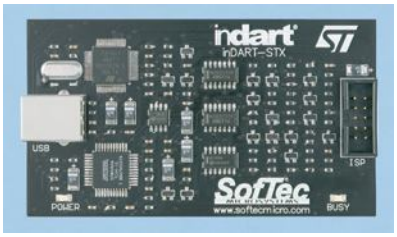
Microcontrollers and Microprocessors - 8-Bit - ST - continued

ST62 is a family of rugged microcontrollers with high EMC, low EMI. All members feature watchdog and have 8MHz clock.

All devices with prefix ST62E=EPROM ST62T=OTP



The temperature range is -40°C to +85°C for all the OTP versions. EPROM Devices For Prototyping are rated to +25°C

inDART-STX/D - In-Circuit Debugger/ Programmer for STMicroelectronics ST FIVE 508 and ST72F Families (USB)

SofTec MICROSYSTEMS Development Tools for the Embedded World

inDART-STX/D is an in-circuit debugger/programmer which supports all of the devices of the ST72F FLASH family as well as all of the devices of the ST FIVE 508 FLASH family. It takes advantage of the ISP (In-System Programming) feature to program the FLASH memory of the target microcontrollers. inDART-STX/D seamlessly integrates into the popular ST development environment: STMicroelectronics STVD7 and Metrowerks CodeWarrior for ST7 (for working with ST7 devices) or STMicroelectronics Visual FIVE and Raisonance RKit-ST5 (for working with FIVE devices).

Features & Benefits:

- Real-Time Code Execution Without Probes--Works with All Packages
- Standard Chip Used--No Bondouts, 100% Electrical Characteristics Guaranteed
- Seamlessly Integrates Into you Favorite Development Environment
- Built-In ISP Programmer
- USB Connection to the PC

inDART-STX/LITE2 - Design Kit for STMicroelectronics ST7FLITE2 (USB)

SofTec MICROSYSTEMS Development Tools for the Embedded World

inDART-STX/LITE2 is a Design Kit package which includes the inDART-STX in-circuit debugger/programmer unit plus an evaluation board specific for the ST7FLITE2 microcontroller (in DIP20 package). inDART-STX/LITE2 is also supported by Metrowerks CodeWarrior IDE--an evaluation version of which is provided as well. Full-speed program execution allows users to perform hardware and software testing in real time. The instrument is powered by the USB bus, so an external power supply is not required.

Features & Benefits:

- Real-Time Code Execution Without Probes--Works with All Packages
- Standard Chip Used--No Bondouts, 100% Electrical Characteristics Guaranteed
- Seamlessly Integrates Into popular ST Development Environment: STMicroelectronics STVD7 or Metrowerks CodeWarrior (Both Are Provided)
- Built-In ISP Programmer
- USB Connection to the PC
- Includes inDART-STX/D + Evaluation Board with a Sample ST7FLITE2 Microcontroller (DIP20 Package)

PK-ST7FLITE2 - Starter Kit for STMicroelectronics ST7FLITE2

The PK-ST7FLITE2 Starter Kit is an entry level tool which enables the designer to get started with the STMicroelectronics ST7FLITE2 microcontroller. This Starter Kit also includes the evaluation versions of the Metrowerks and Cosmic C compilers for ST7, which seamlessly integrate with STVD7.

Features & Benefits:

- True In-Circuit Real-Time Emulation through USB interface
- STMicroelectronics STVD7 IDE, with Editor, Assembler and Debugger; Evaluation Versions of Metrowerks and Cosmic C Compilers Included
- Working Experiments in Minutes
- USB-to-ICC circuitry which allows the host PC to communicate to the microcontroller through a standard USB cable.
- prototyping area for the designer's own small application

ST7LITE Microcontroller Family

The STLITE are members of the ST7 microcontroller family and are based on a common industry standard 8-bit core with an enhanced instruction set.
The STLITE features single voltage FLASH memory with In-Circuit Programming(ICP) and In-Application Programming(IAP) capability.

In-Circuit Debugging and In-Circuit Programming Tool for STMicroelectronics ST7FLITE0x / ST7FLIT2x Families (USB)

The inDart-ST7 is a powerful, low-cost In-Circuit Debugging (ICD) and In-Circuit Programming (ICP) tool, developed for STMicroelectronics ST7 8-bit Microcontroller Family.

Features & Benefits:

- Real-Time code execution without probes
- Works with all device packages
- Standard Chip Used, so no Bondouts, 100% electrical characteristics guaranteed
- STVD7 Source Level Debugger
- Built-In ISP Programmer
- USB Connection to the host PC

DEBUGGER FOR ST7, STR7, UPSD PROGRAMMER

The RLink (STX-RLINK) is Raisonance's versatile, low-cost, in-circuit debugger and programmer for ST7, uPSD, and STR7 microcontrollers. It connects to application or evaluation boards for programming and debugging via a JTAG standard connection for ARM core-based and uPSD microcontrollers, or via STMicroelectronic's In-Circuit Communication (ICC) connection for ST7 microcontrollers.

- In-circuit debugging and programming
- Connection to application board via JTAG standard, or ST standard ICC connection
- USB interface to host PC
- Powered from USB

STM8S Flash Microcontrollers

The STM8S family of 8bit flash MCUs offer an ideal solution for industrial and appliance market requirements. The microcontrollers boast an advanced core version combined with 3-stage pipeline ranks, true embedded EEPROM and calibrated RC oscillators.

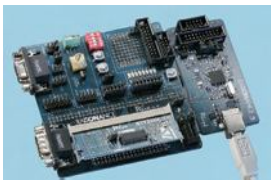
STM8S2XX Evaluation Board



New

This evaluation board is a complete development platform for the STM8S2xx (128K) 8-bit MCUs. It provides a flexible and open design area, ideal for demonstrating device capabilities. Added to this the board can evaluate many peripherals and features including CAN2.0A/B, I^2C, SPI, USART channels with smart card, IrDA and LIN support.

STM8S REva Starter Kit

New

This Raisonance starter kit is a complete solution for application development and evaluation of the STM8S family of MCUs.

Features Include:

- Ride development environment
- Raisonance C compiler
- RLink (USB/JTAG) in-circuit debugger/programmer
- Demonstration motherboard
- Daughter board
- STM8S target device

STR7 Starter Kit

The REva Starter Kits are Raisonance's complete, cost-effective solutions for starting application development and evaluating the features of STR7 ARM core-based microcontrollers. They come with all the hardware and software developers need to start developing applications for STR7 devices, including the REva evaluation board, STR7 microcontrollers, the embedded RLink JTAG interface and the Raisonance Integrated Development Environment (RIDE).

Embedded RLink:

- USB interface to host PC
- JTAG standard interface

REva mother board:

- 1 standard SO-DIMM connector to plug in
- daughter boards.
- RS232 driver and 2 DB9 connectors
- USB powered, no external power required
- VDD settings for 1.8V, 3.3V and 5V

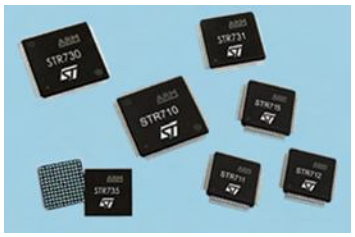
STR711/12 EVAL BOARD KIT

The KickStart Kits™ are IAR's complete, cost-effective solutions for starting application development and evaluating STMicroelectronic's ARM® core-based microcontrollers.
They come with all the hardware and software you need to start developing applications for STR711F, STR712F devices, including the KickStart Development Board with STR7 micro-controller, the IAR JLink-KS USB-to- JTAG debugger and IAR Embedded Workbench® for ARM (EWARM) integrated development environment with the 32KB KickStart version of the C/C++ compiler, built in Flash loader and sample projects covering all STR7 peripherals.



- Supplies power from USB connection via pin 19 of the JTAG connector (no additional power supply required).
- Supported platforms: Microsoft® Windows® 2000 and XP
- Download speed up to 50KB/sec

STR7 Flash Family

32-bit ARM-based Microcontrollers

STR7 Flash microcontrollers are a new generation of super-integrated, single chip devices, combining the industry standard ARM7TDMI® RISC microprocessor with embedded Flash and powerful peripheral functions including USB and CAN. They are ideal for embedded applications requiring a compact yet powerful MCU, or versatile, scalable solutions such as user interfaces, factory automation systems and Point of Sale applications.

Key features:

- Fast memory access times
- Low power consumption
- Superior interrupt handling
- Wide range of peripherals including UARTs CAN, USB2.0 HDLC dual I²C and real time clocks
- Best support for IAP
- Memory protection sector prevents unauthorised code access

µPSD Microcontroller Family

Flash 8032 microcontrollers with programmable logic and USB

µPSD is a family of 8-bit microcontrollers built on an 8032 microcontroller core.The µPSD family devices feature large dual-bank Flash memories, a large SRAM, Flash-based programmable logic and JTAG in-system programming (ISP). The family's 24/40MHz 8032 core supports USB and many other on-chip peripherals making the devices suitable for a variety of embedded control applications.

Key features:

- On-chip programmable Logic
- Multiple communication interfaces including: USB, SPI, I²C, IrDA, UART(x2)
- JTAG in system programming and Debug
- 4 channel, 8-bit ADC
- 40MHz 5V or 24MHz 3.3V 8032 core

Turbo µPSD Microcontroller Family

High-performance 8-bit microcontrollers with USB and JTAG debug

The Turbo uPSD family of high-performance 8-bit microcontrollers combine the 8051 MCU core with a flexible memory structure, programmable logic, and a verity of analog and digital peripherals. These features are supported by the 4-pin serial JTAG interface, which provides non-intrusive, real-time debugging, and fast programming of Flash memory. The Turbo µPSD Microcontrollers are well suited to applications in a wide range of situations e.g. vending machines, building security systems or automotive GPS.

Key features:

- 10 MIPs 40 MHz Turbo 8032 core
- USB 2.0 peripheral (on selected devices)
- On-chip debugging via JTAG interface
- In system serial programming via JTAG interface
- 8 channel/10-bit A/D with fast conversion
- Watchdog timer
- Two timers

TOSHIBA

TMP Series Microcontrollers

The TMP Series is a high-speed, high-performance microcomputer with built-in flash memory and it is pin compatible with its mask ROM version. Writing programs in the built-in flash memory enables this microcomputer to perform the same operations as the other versions. The built-in flash memory can be rewritten on board (without removing it from the PCB) by a built-in boot program.

ZiLOG

eZ80 8-Bit Flash Microcontrollers

The eZ80F91/F92/L92 Microcontrollers are high-speed, single-cycle, instruction-fetch devices with on-chip Flash program memory. The eZ80Acclaim!™ Flash MCU devices provide the memory needed to implement communication protocol stacks and achieve the flexibility when performing in-system updates of application firmware.

Z8F08X and Z8F642 Development Kits

ZiLOG

The Z8 Encore!® MCU Development Kits offer all the hardware and software tools required for the Z8 Encore based designs with the benefit of a greatly reduced time-to-market. A free full version ANSI-C-Compiler is also included.

Features:

Hardware:
- Development Board, Smart Cable for PC to Z8 Encore!®
- Z8F08x or Z8F642 Development Board
- Universal 5VDC Power Supply

Software:
- ZDS II - Z8 Encore!® IDE with ANSI C-Compiler
- Sample code
- Document browser

Documentation:
- Quick Start Guide
- Development Kit User Manual
- ZDS II - IDE User Manual
- eZ8 CPU User Manual
- Product Specification
- Product Briefs
- Application Notes

Z8 8-Bit Flash Microcontrollers

ZiLOG

These Flash Microcontrollers are part of the Z8 Encore!™Series and are designed to set a new standard for performance and on-chip-peripherals. The devices come in various packages with between 20 and 80-pins and upto 64KB of Flash program memory and 4KB RAM. The new single-pin debugger and programming interface simplifies code development and allows for easy in-circuit programming. The full-duplex UART provides serial communications and IrDA encoding an decoding capability. Up to 12 channels of 10-bit ADC are available depending on the product, along with 16-bit timers/PWM and an on-chip debugger.

RL Re-reeling available

Z86E03-40

ZiLOG

A low cost family of 8-bit microcontrollers from Zilog with on-board OTP PROM, RAM, I/O, timer/counters, watchdog, power-on reset/brown out protection and two comparator inputs that can be configured to provide analogue inputs/ADCs.

Features include:

Register-to-register architecture — avoids accumulator bottlenecks and is more code efficient than RISC processors.
Two timers on most devices (exception Z86E03) — combines with flexible clocking and interrupt modes for simpler software solutions.
Relocatable stack — only limited in size by total RAM space.
Fast context switching — to rapidly respond to interrupts and switch tasks.

Applications:
- Security systems
- Smart cards
- Exercise equipment
- Keyboards
- Remote controls
- Monitors
- Electronic games
- Answering machines
- Kitchen appliances
- Mobile phones
- Microwave ovens
- Automotive modules
- Card readers
- Industrial controls

Microcontrollers and Microprocessors - 8/16/32-Bit - MICROCHIP - Development Tools

PICSTART® Plus - Low Cost Development/Evaluation System

MICROCHIP

The PICSTART® Plus development system from Microchip provides a highly flexible low cost entry level programming tool for all of the PIC 8-bit series of microcontrollers including One Time Programmable, Erasable and FLASH devices.

The 40 way universal ZIF socket accepts device sizes from 8-pin 0.3" to 40-pin 0.6" DIL.

PICSTART Plus operates in a Windows 3.1, 95, 98, NT environment on any PC compatible machine, access to a serial port is required for communication.

The PICSTART Plus is easy-to-use and features Microchip's highly acclaimed MPLAB™ Integrated Development Environment (IDE). This features an editor, MPASM assembler and Windows based simulator which provides a comprehensive user interface with on-screen views of all used registers during program simulation.

A copy of the PICC™ LITE C compiler is included, this is limited to compile specifically for the sample PIC16F84 included with the kit.

Full documentation is included and software is supplied together with device data on CD-ROM. The development system is supplied complete with 9-way RS-232 cable, PIC16F84 device sample and a universal power supply.

UK or International IEC power leads are available separately.

PIC In-Circuit Programmer

The ISPIC Adaptor allows for In-Circuit Programming of serially programmable PICmicros, including One Time Programmable and FLASH devices.
The adaptor plugs into the programmer ZIF socket, such as the PICStart+ (704740), with the cable end connecting to the target board containing the target PICmicro.

Features:
- In-Circuit Programming of PICmicro
- Connects directly from any PIC programmer
- Easy programming of any package
- Connects directly to programmer ZIF socket
- Connects directly to target board
- Use male header, Order Code: 673225

Device Support:

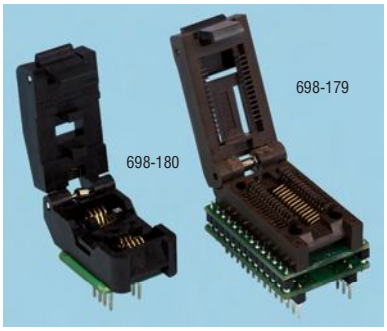
TEAclipper-PIC-xV-PT™

TEAclipper PIC Programmer Core Processors

New

TEAclipper-PIC-HV-PT and TEAclipper-PIC-LV-PT are the core processors used in TEAclipper/PIC programming clips. They allow custom fieldprogramming products to be manufactured in applications where a different form factor is required to the TEAclipper/PIC.
TEAclipper/PIC devices make it easy to sell code written for PICs and also to deliver updates to products already delivered to customers.



Features:
- Based on the PIC18F66J16 microcontroller. No resonator required
- 64-pin TQFP package
- PIC-HV-PT can generate Vpp programming voltages of up to 13V
- PIC-LV-PT can only generate Vpp programming voltages up to the target board Vdd

PIC10F Adaptor Kit

The 6L SOT-23 to 8P DIP Adapter Kit is designed to make the SOT-23 look like a standard 8 pin DIP so it can be used in standard development tool sockets. This is a hobby kit which is designed to be used for early evaluation, not for production applications. The pin-out is family specific and is different from the standard 8P DIP pin-out. The kit is made up of 5 PIC10F206 SOT-23 devices and 5 pin scramble boards with DIP pins.

PICtail board for SD and MMC

The PICtail Daughter Board for SD and MMC cards (AC164122) is a universal board that interfaces the Secure Digital (SD) and Multi-Media Card (MMC) to the Serial Peripheral Interface (SPI) bus of the microcontroller. This PICtail board is designed to operate with a multitude of demonstration boards, including all those having PICtail signals, those with PICtail Plus signals (utilizing the card-edge connectors like the Explorer 16), and those with non-standard PICtail signals.

Explorer 16 Plug-In Modules (PIMs)

MA330016

Processor Plug-In Modules are small circuit boards to be used with the various Microchip Development Boards to evaluate Microchip microcontrollers and dsPIC devices. These plug into the main processor socket of the Development Boards so that different microcontrollers can be used for prototyping, demonstration or development --quickly and easily. Microchip development tools such as the MPLAB© REAL ICE™ and MPLAB ICD 2 connect directly to these development boards and provide quick, full-featured hardware/software/firmware development environment using the free MPLAB Integrated Development Environment software.

MPLAB®ICD 2 In-Circuit Debugger

The ICD 2 module connects between the PC and the users target board allowing direct in circuit debugging, in real time, of the target microcontroller. It can also be used as a programmer to download programs to the target microcontroller.

The In-Circuit Debugger 2 (MPLAB® ICD 2) allows the debugging of a range of PIC microcontrollers through the MPLAB® Integrated Development Environment (IDE) graphical user interface. Programs may be executed in real time or single step, watch variables established, break points set, memory read/writes accomplished and more.

Features:

- USB (full speed 2Mbits/sec) and RS232 interface to host PC
- Real time background debugging
- MPLAB compatible (copy included)
- Firmware upgradable from the PC
- Supports low voltage target systems (2.0 to 6.0V)
- Diagnostic LEDs (Power, Busy, Error)
- Reading/Writing memory space and stack of target microcontroller
- Freeze on halt

Devices Supported:

PIC18C601/801, PIC18F248/258/442/448/452/458/6620/6720/8620 and PIC18F8720.

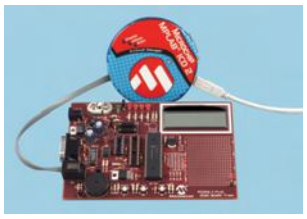
MPLAB® ICD 3 In-Circuit Debugger/Programmer

MPLAB ICD 3 In-Circuit Debugger is an all in one in-circuit debugger / programmer solution for Microchip's dsPIC Digital Signal Controller (DSC) and Flash PIC Microcontroller (MCU) devices. The ICD 3 programs and debugs these devices with the aid of the powerful and easy to use MPLAB Integrated Development Environment (IDE).

Features Include:

- Full-speed, Real-time emulation
- Source debugging, stopwatch, complex breakpoints, and in-circuit programming
- USB powered (USB 2.0, 480 Mbps)
- Internal 1MB memory buffer for increased download speed
- Overvoltage and undervoltage protection
- Target power, up to 100 MA
- Vdd range 2-5.5V
- Vpp range 2-14V
- Firmware upgrade via MPLAB IDE download



RL Re-reeling available

Kit Contents:
- 1x MPLAB ICD 3 In-Circuit Debugger module
- 1x USB cable
- 1x 6 inch RJ-11 modular cable from MPLAB ICD 3 to target
- 1x interface test module
- 1x CD containing MPLAB IDE software and product documentation

PICDEM™ 2 Plus Demo Board

The PICDEM 2 Plus Demonstration Board provides designers with a tool for programming and debugging FLASH-based microcontrollers. It has an ICD port, LCD read-out, sounder and a temperature sensor. The board is supplied with software on a PIC18F452 microcontroller to demonstrate the device's features and peripherals. The program sets up the microcontroller as a real-time clock and measures the local temperature, both displayed on an LCD display. A PWM signal is sent directly to the Piezo sounder.

An active RS-232 port and on-board Serial EEPROM is provided. The board offers generous prototyping area for development. A second FLASH-based microcontroller, the PIC16F877, is included with demonstration program.

Source code is also provided for users to understand and modify the algorithm for their own applications. Users with an MPLAB® ICD 2 can cut, paste, rewrite or add to the program using the capability of the Flash-based microcontroller's In-Circuit Debugger.

PICkit 1 FLASH Starter Kit

The PICkit 1 FLASH Starter Kit is a development kit with easy interface for programming Microchip's 8/14-pin FLASH family of microcontrollers. The kit allows for programming, evaluation and developing applications using the 8 and 14-pin FLASH PIC-micros. Code development and debugging is performed using the MPLAB® Integrated Development Environment (IDE).

FEATURES:
- 3"x4.5" circuit board with snap-off prototyping board
- Easy to use Windows® programming interface for programming the 8/14 pin FLASH PICmicros
- Seven tutorials written in both Assembly and HI TECH 'C' demonstrate how to use the 8/14 pin FLASH PICmicros
- Microchip's Tips 'n Tricks booklet provides design techniques
- PICkit 1 User Guide (included on CD ROM)
- MPLAB IDE software for code development environment
- HI-TECH PICC™ LITE C Compiler (contained on the MPLAB CD-ROM)
- Supports 8/14-pin FLASH PICmicros® including: PIC12F629, PIC12F675, PIC16F630 and PIC16F676

CONTENTS:
- PICkit 1 Circuit Board with 8-pin PIC12F675
- PICkit 1 FLASH Starter Kit CD-ROM
- MPLAB IDE CD-ROM
- Software and Hardware "Tips 'n Tricks" for 8-pin FLASH PIC Microcontrollers Booklet
- USB Interface Cable

System Requirements:
- PC-compatible with a Pentium® or equivalent
- 16 MB RAM min

PICkit™ Signal Analysis Board

The Signal Analysis PICtail™ Daughter Board

The Signal Analysis PICtail™ Daughter Board is is an extension to the PICkit™ 1 Flash starter Kit. It is designed to program PIC10F2XX devices and contains a FLASH microcontroller and 16kB of EEPROM memory. Used in conjunction with the starter kit, the board allows real time measurements of analogue signals processed by the PIC microcontroller. The signal-analysis capabiltites include processing data and displaying it as a Real-Time Strip Chart, Oscilloscope plot, Histogram or by carrying out Fast Fourier Transform.

Baseline Flash Microcontroller Programmer (BFMP)

This in-circuit serial programmer is designed to be used with any of Microchip's baseline Flash PIC® microcontrollers. Using a USB connection (to eliminate the need for an external power supply) this BFMP is designed to provide ICSP support as well as stand alone programming support in a simple and in-expensive way. It includes a Graphical User Interface which is used to read, write and verify the microcontroller being programmed. The operating systems which can be used are Windows 98/ME/2000/XP.

PICkit™ 2 Starter Kit

The PICkit 2 starter kit is a low-cost, easy to use development kit for programming Microchip's 8, 14 and 20-pin Flash microcontrollers. It includes everything needed to program, evaluate and develop the microcontrollers and helps the user to get up to speed quickly using PIC microcontrollers. The included instructions cover I/O, Interrupts, A/D Converters, Data tables and Timers.

Features:
- Easy to use Windows programming interface
- 12 sequential lessons written in Assembly to demonstrate how to use the microcontrollers
- Microchip Tips 'n Tricks booklet to provide efficient, low-cost design techniques
- PICkit 2 User's Guide CD-ROM
- Low pin count demo board User's Guide
- MPLAB IDE Software for complete code development
- HI-TECH PICC™ LITE C Complier

PICkit™ 2 Debug Express

The PICkit 2 Debug Express is a low-cost development kit with an easy to use interface for debug as well as programming. It comes complete with a development board that contains Microchip's 44-pin PIC16F887 Flash microcontroller. This starter kit is designed to help developers get up to speed quickly using PIC® microcontrollers and provides everything needed to program, evaluate and develop applications. Instructions are provided in a series of twelve lessons that cover I/O, Interrupts, A/D Converters, Data Tables and Timers with an additional lesson covering debugging features. All source code files for the lessons are furnished.

PICkit 2 Debug Express (DV164121) bundles the PICkit 2 Device Programmer with a 44-pin demo board. The board includes a PIC16F887 TQFP pre-soldered device and a generous surface mount prototyping area. Tutorials in the User's Guide demonstrate the debugging features implemented.

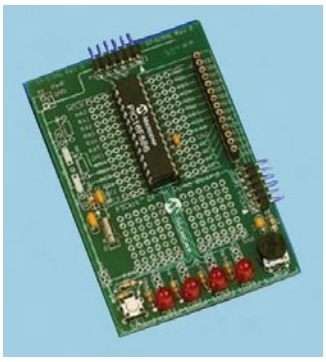
Low Pin Count USB Development Kit w/ PICkit 2



The low pin count USB development kit provides an easy way to evaluate the functionality of the PIC18F14K50 and PIC18F13K50 USB microcontrollers. A self-directed course and lab material have been designed and included with the view to easing the process of adding USB connectivity to embedded systems.
The PICkit™ 2 development programmer/debugger is a development tool with an easy to use interface for programming and debugging Microchip's flash families of microcontrollers.

Kit Contents:
- 1x Low Pin Count USB Development Board
- 1x Unpopulated spare development board
- 1x PIC18F14K50 Debug Header
- 1x PICkit 2™ Debugger/Programmer with cable
- 1x CD containing the user guide, course materials, and product documentation

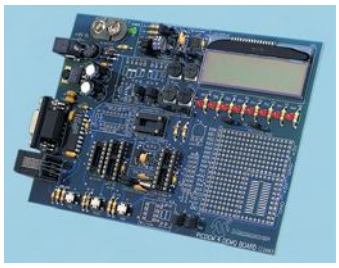
PICkit 3 Debug Express



This in-circuit debugger/programmer provides a hardware debugger and programmer for the PIC ® and dsPIC® flash microcontroller famlies. It uses the powerful graphical user interface of the MPLAB Integrated Development Environment (IDE) and is connected to a PC using a full speed USB interface and to the target MCU via an RJ-11 debug connector.

Features Include:
- Full speed USB
- Real-time execution
- MPLAB IDE compatible
- Built-in over-voltage/short circuit monitor
- Firmware upgradeable
- Supports low voltage
- Diagnostic LEDs
- Read/write program and data memory
- Erase of program memory space
- Freeze-peripherals at breakpoint

PICDEM™ 4 Demo Board

The PICDEM™ 4 Demonstration Board can be used to evaluate and demonstrate the capabilities of Microchip's 8-pin, 14-pin and 18-pin (PIC12F, PIC16F and PIC18F) microcontrollers. The demonstration Board showcases many features of low pin-count parts, including Local Interconnect Network (LIN) and motor control features using the enhanced capture/compare/PWM module (ECCP).
By connecting the PICDEM 4 Demonstration Board to an MPLAB® ICD 2, a designer can develope, simulate, debug and download code to a microcontroller using Microchip's powerful graphical MPLAB integrated Development Environment (IDE). Low power operation is achieved with a supercapacitor circuit and jumpers allow the on-board hardware to be disabled to eliminate current draw in this mode.

Features:
Key features of the PICDEM 4 Demonstration Board include:
- RS-232 interface
- 2x16 liquid crystal
- ICD connector for programming via in-Circuit or developing with MPLAB ICD 2
- Eight LEDs, four potentiometers and three push buttons
- PCB footprints for EEPROM, H-Bridge motor driver and LIN transceiver
- Support for crystal RC or canned oscillator modes
- Support for either power adapter or battery
- Generous prototyping area and header for expansion

PICkit Serial Analyzer

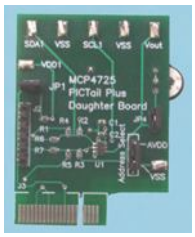
The PICkit Serial Analyzer simplifies the chore of managing serial communication with a device under test. The Windows® user interface (provided) configures the hardware and 'scripts' communication with the target device. Scripts created within the software GUI are saved to an internal library for future use. Once created, scripts can be conveniently assigned to push buttons or simply executed directly from the library index. All communication data and events are posted to a transaction window in a readable format.

The PICkit Serial Analyzer currently supports the following protocols:

- I2C™ - Master and Slave
- SPI
- USART - Asynchronous and Synchronous
- LIN (external hardware required to meet electrical specifications)
- MICROWIRE

The 28-Pin Demo Board includes a PIC16F886, switch, LED(s), connector for the PICkit Serial and ample prototype area. The processor contains demonstration firmware supporting I2C™ communication and emulation of 3 I2C™ devices: EEPROM, ADC and Real Time Clock.

Example custom GUI(s) are provided to demonstrate use of the DLL in each of the supported serial protocols. The examples come as projects for Visual Basic 2005 Express (free download from Microsoft®).



Features:

- PICkit Serial Analyzer
- 28-Pin Demo Board (w/ PIC16F886 microcontroller and generous prototyping area)
- USB Cable
- Easy-to-use Windows®-based graphical user interface
- Software DLL for custom software development
- CD containing all user's guides, technical documentation and source code

PICkit™ Serial I²C Demonstration Board

This demonstration board exhibits the I²C serial communications and operation of the following devices:

- 24LC02B - 2Kbit Serial EEPROM
- MCP9801 - High-Accuracy Temperature Sensor
- MCP3221 - Low-Power 12-Bit A/D Converter
- TC1321 - 10-Bit Digital-to-Analog Converter
- MCP23008 - 8-Bit I/O Expander

The kit is designed to easily connect to the PICkit Serial Analyzer which provides the I²C master mode serial communications and power for the PICkit™ Serial I²C Demonstration Board.

Features include:

- Five unique devices with I²C interfaces
- Test points on the I²C bus and most of the devices
- Connector for directly connecting to an I²C bus or PICkit Serial Analyzer

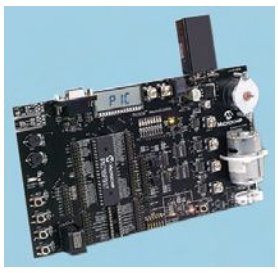
MCP1252 Charge Pump Backlight Demo Board

Features:



- Programmed MCP1252 Charge Pump control (via the PIC10F206)
- Four white LEDs
- PIC10F206 microcontroller
- Push-button interface for multiple control options
- Baseline Flash Microcontroller Programmer (BFMP) Header for reprogramming the PIC10F206
- 3 AAA Battery Pack (Batteries not included)

The MCP1252 Charge Pump Backlight LED Demo Board demonstrates the use of a Charge Pump device in an LED application. The board also serves as a platform to evaluate the MCP1252 device in general. The MCP1252-ADJ is an excellent choice for biasing the back lighting or driving other LED applications. Light intensity is controlled uniformly through the use of ballast resistors. The peak intensity is set by the feedback to the the MCP1252-ADJ. Dimming is accomplished by pulse-width modulating the shutdown pin of the device.
The board also feature a PIC10F206 microcontroller in a SOT23 package, which is used to provide an enable signal to the MCP1252. The PICmicro also accepts a push-button input that allows the user to adjust the white LEDs to five different light intensities, in addition to placing the system in a standby mode that consumes less than 1 uA of current (typical).

PICDEM™ MECHATRONICS DEMO KIT

The PICDEM™ Mechatronics demonstration board is an easy-to-use mechatronics development and demonstration platform.
The demonstration kit takes a hands-on approach to learning about mechatronics. Jumper wires are provided in the kit which allow the developer to experiment with connecting the PIC microcontroller to various components on the board. These components include sensors, LEDs, human input devices and motor drivers. The board comes with nine example projects which include firmware, connection diagrams (for the wire jumpers) and schematics.

Features:

- PIC16F917 MCU with 8 MHz internal oscillator and on-board LCD module
- Displays: 8 LEDs and LCD (pre-connected to the LCD module)
- Stepper motor and brushed DC motors
- Analog temperature sensor (Microchip TC1047A)
- Light sensor
- 32.768 kHz crystal for time generation
- Human inputs: 4 tactile switches, 2 potentiometers
- Over-current protection circuit
- ICSP™ programming capability and MPLAB ICD 2 interface connector
- Optical speed sensor for brushed DC motor
- 20-pin socket (compatible with all 8-, 14- and 20-pin Flash devices)
- Nine example projects with complete source code

PICDEM Touch Sense 1 Development Kit

The PICDEM™ Touch Sense 1 Development Board and Diagnostic Tool provides a platform to introduce users to Microchip's Capacitive mTouch™ Sensing Solutions. This board is a completely sealed application example using three different touch sensor configurations in the form of a Directional pad, Keypad and Slider section. A factory programmed firmware application provides the user immediate access to all of the board's features through the use of the accompanying Windows® based Diagnostic Tool and PICkit Serial Analyzer. The Diagnostic Tool provides the user a platform to analyse application critical information in real-time" as it relates to touch sensor behavior.

Features:
- Populated with PIC16F677 and PIC16F887 MCUs
- Directional Pad, Keypad and Slider sensor configuration sections
- ICSP™ programming capability
- PICkit™ Serial Analyzer connectivity

Kit Contents:
- The PICDEM™ Touch Sense 1Development Board

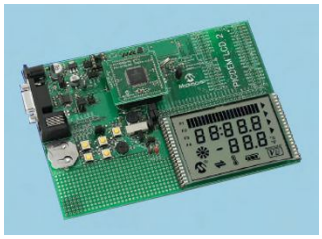
Graphics PICtail™ Plus Daughter Board



The Graphics PICtail™ Plus Daughter Board 2 is a demonstration board for evaluating Microchip Technology's graphic LCD display solution and Graphics Library for 16-bit microcontrollers. It is an expansion board compatible with the Explorer 16 Development Board (DM240001). It can be used in conjunction with the Graphics Library for Microchip microcontrollers.

Features:
- 2.8" QVGA (320x240) LCD module with resistive touch screen
- 65K color support
- Supports portrait and landscape orientations
- Stand-alone graphics controller, Solomon Systech SSD1906, supporting 4/8-bit STN, 4/8-bit CSTN, 18-bit HR-TFT and 9/12/18-bit TFT interfaces via connector
- 4 Megabit (512Kx8) flash memory for graphic data storage
- Sound buzzer

PICDEM LCD 2 Demonstration Board

The PICDEM LCD 2 Demonstration Board (DM163030) shows the main features of Microchip's 28, 40, 64 and 80-pin LCD Flash PIC microcontrollers including the LCD voltage booster and contrast controller. It is populated with the PIC18F85J90. Other devices are supported via a transition socket and are available separately. A sample LCD glass display is included for custom prototyping. The glass features 7-segment displays, wipers, thermometers, star bursts, and other common icons.

Included applications:
- Voltmeter - A/D module measures the voltage of the on board potentiometer and displays a voltage between 0.00V and 3.30V on the LCD.
- Thermometer - The A/D module measures the voltage of the thermistor and converts to temperature both in Celsius and Fahrenheit to continuously display the temperature.
- Clock - Timer/Clock function shows hours:minutes:seconds with a moving second hand using on board 32 kHz watch crystal.
- Charge Pump and Software Contrast - When using the PIC18F85J90 family of devices the LCD module can be configured as a charge pump and software contrast control is activated.

PICDEM System Management Kit

The PICDEM™ System Management Kit is a demonstration and training tool for system integration and the design of a variety of applications. PIC® microcontrollers provide powerful integrated peripherals, ideally suited for such integration tasks. System integration refers to the consolidation of multiple systems within a unified design. The PICDEM System Management Board provides an I2C™ communications bus, typically found in applications such as personal computers or rack mount servers. The bus connects to multiple devices to monitor and record the health and status of the system. The PICDEM System Management Board integrates the functions of a dedicated Real-Time Clock (RTC), serial EEPROM, thermal management controller and analog-to-digital converter using a single PIC microcontroller.

In conjunction with the PICkit™ Serial Analyzer (included in the kit), communication to the emulated devices on the bus can be managed and monitored. The PICkit Serial Analyzer is a low-cost development tool that allows communication between a PC and the serial protocol of the system under test.
The PICDEM System Management board is populated with Microchip's mid-range PIC16F886 microcontroller.

Features:
- Emulation of 24LC02 Serial EEPROM
- Emulation of I2C real-time clock
- I2C thermal management control using MCP9700 temperature sensor
- Control of 2-, 3- and 4-wire fans (3-wire fan supplied)
- +3V lithium battery
- Microchip's MPLAB® IDE software for a complete code development environment
- HI-TECH PICC™ LITE C Compiler (contained on the MPLAB IDE CD)
- CCS PCB Baseline C Compiler installed with MPLAB IDE

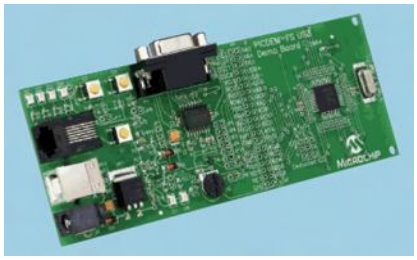
Low Power Solutions Demo Board



The Low Power Solutions Demonstration board provides designers a convenient and fun way to explore PICmicro® nanoWatt features within a functional ultrasonic range-finder application. It features the PIC18F4620, Microchip Technology's latest power managed device.
The development tool is ideal for learning nanoWatt features and implementing system power reduction techniques. The Low Power Solutions Demonstration board is part of the Workshop-in-a-Box 2, a complete nanoWatt training kit designed for self-paced and instructor-led training.

Features:
- Fully functional ultrasonic range finder with LCD display (PCB also supports four 7-segment LEDs)
- DC boost circuit
- USART
- Connector for MPLAB® ICD 2 In-Circuit Debugger and programming
- Two power supply options: 9V power supply or 9V battery
- Test points to measure system and PICmicro power consumption via current meter
- Three switches for input and a reset switch and 2 LEDs
- Microchip TC1047A Temperature sensor
- CD with user's guide, sample code written for the MPLAB C18 Compiler and three step-by-step labs illustrating nanoWatt features

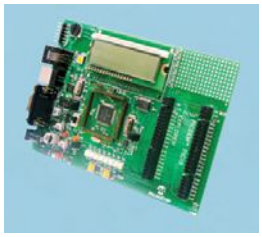
PICDEM™ Full Speed USB Demo Board



The PICDEM™ FS-USB is a demonstration and evaluation board for the PIC18F4550 family of Flash microcontrollers with full speed USB 2.0 interface. The board contains a PIC18F4550 microcontroller in a 44-pin TQFP package, representing the superset of the entire family of devices. The pre-loaded USB bootloader demonstrates the Enhanced Flash memory capabilities of the device and the PIC18F4550 can be re-programmed in circuit without an external programmer.

Features:
- 20 MHz crystal
- serial port connector/interface (for demonstration of migration from legacy applications)
- connection to the MPLAB® ICD 2 In Circuit Debugger
- voltage regulation, with the ability to switch from external power supply to USB bus supply
- expansion connector, compatible with the PICtail™ daughter boards standard
- temperature sensor TC77 (connected to the I2C™ bus)
- potentiometer (connected to RA0 input) for A/D conversion demonstrations
- 2 LEDs for status display and 2 input switches
- CD-ROM with full documentation about the board, application notes and software libraries

PICDEM™ HPC Explorer Board

The PICDEM™ HPC Explorer Board demo board is the ideal complement to the MPLAB ICD 2 In Circuit Debugger which enables the design engineer to evaluate the performance of Microchip high-end 8-bit microcontrollers of the PIC18F series.The board features a PIC18F8722 microcontroller, which is the superset of the entire 64- and 80-pin PIC18FXXXX general purpose family. A daughter board (mezzanine) is also part of the kit and allows different processors sharing the same pin out to be mounted and tested on the Explorer board. The same connector allows MPLAB-ICE 4000 (and via an extension MPLAB-ICE 2000) real time in circuit emulators to be attached to the board.

The Key Features include:
- PIC18F8722, 128K Flash, 80-pin TQFP microcontroller
- Daughter board and MPLAB ICE2000/4000 connector (with switch to disable on board processor)
- Convenient connection for MPLAB ICD 2 (In-Circuit Debugger) for in-circuit programming and debugging
- PIC- Tail™ connector, to allow connection to standard expansion boards
- Temperature sensor demo included (illustrates Microchip's TC77 device)
- Potentiometer (connected to 10-bit A/D, analog input channel)

DM183033 - Internet Radio Demonstration Board

The Internet Radio Demonstration Board uses the PIC18F67J60 8-bit microcontroller with integrated 10Base-T MAC and PHY to connect to SHOUTcast servers and stream MP3 data to an audio decoder. This demonstration board implements the basic features of an internet radio, such as volume control and station selection.

Features:
- PIC18F67J60 8-bit microcontroller with integrated 10Base-T MAC and PHY
- Integrated magnetic RJ-45 connector with status LEDs
- VLSI VS1011E MPEG Audio Codec to decode MP3 data streams and drive headphones
- Two 256 Kbit serial SRAMs for buffering of TCP packets and MP3 audio data
- Brilliant OLED display showing song title and author, station name and IP address of the demonstration board
- Push button switches to control station, volume and bass
- Connector for MPLAB® ICD 2 In-Circuit Debugger or MPLAB REAL ICE™ In-Circuit Emulator

MPLAB Starter Kit for PIC24F

New

The PIC24F Starter Kit contains everything needed to begin exploring the high performance and versatility of the PIC24F microcontroller family. This kit includes an integrated in-circuit debugger and programmer, USB device and host connectors, tri color LED, capacitive touch pad and an OLED display. Menu driven demonstration software supports data logging, thumb drive, and graphics applications to test the PIC24F MCU.
A USB connection to a host computer supplies communi-

cations and power to the board, no additional external power supply is needed.

Features:
- Easy and inexpensive way to learn the PIC24F 16-bit MCU family
- Starter kit features the PIC24FJ256GB110 MCU with 256KB Flash
- Peripherals including CTMU for capacitive touch and USB OTG
- Integrated debugger and programmer
- Free MPLAB C Compiler

Explorer 16 Development Board for PIC24 and dsPIC33

MICROCHIP

The Explorer 16 development board is designed to aid the evaluation of the features and performance of the Microchip PIC24 Microcontroller and dsPIC33 Digital Signal Controller (DSC) families. Coupled with the MPLAB ICD 2 In Circuit Debugger, real-time emulation and debug facilities speed evaluation and prototyping of application circuitry. The Explorer 16 features two interchangeable Plug-In Modules (PIMs), one each for the PIC24FJ128GA010 and the dsPIC33FJ256GP710 DSC.

Board Features:
- RS-232 serial port and associated hardware
- On-board analog thermal sensor
- USB connectivity for communications and device programming/debugging
- Full emulation and debug support for MPLAB ICD 2
- 2-line by 16-character LCD display with provision to add on graphic LCD version
- Potentiometer for analog input
- Serial EEPROM
- Prototype area for developing custom applications
- Socket and edge connector for PICtail™ Plus card compatibility
- Interface for PICkit 2 Programmer
- JTAG connector pad

Kit Content:
- The Explorer 16 Development Board with a preprogrammed PIC24FJ128GA010 Processor Installation Module (PIM) installed
- A preprogrammed dsPIC33FJ256GP710 PIM
- An RS-232 cable
- CD ROM including: hardware data sheets, schematics and PCB drawing files for the PIM modules, example programs ect.

Audio PICtail Plus Daughter Card

MICROCHIP New

Record & playback with Explorer16 Development Board. The Audio PICtail Plus Daughter Board is used with the Explorer 16 Development Board and the 16 bit 28 pin Starter Board to facilitate rapid implementation, development and testing of full duplex speech and audio applications with dsPIC DSC and PIC24H.

Features:
- Audio Playback using PWM signal from dsPIC/PIC24H Output Compare module
- 4th order Low pass filter for Audio PWM signal demodulation
- 16/24 bit Audio Codec
- 4 Mega bit Serial Flash
- 110mW Headphone Amplifier
- Microphone and Line input with adjustable gain
- Line output with adjustable gain
- Works with Explorer 16 Development Board and 16-bit 28 pin Starter Board

Explorer 16 Starter Kit

MICROCHIP

The Explorer 16 Starter Kit is a complete set of tools for application development using Microchip's PIC24F, PIC24H, and dsPIC33 16-bit microcontrollers. The kit includes MPLAB® ICD 2 In Circuit Debugger, Explorer 16 Development Board, 9V universal power supply that can be used for either the Explorer 16 Development Board or the MPLAB ICD 2 in-circuit debugger, serial cable, and both PIC24FJ128GA010 and dsPIC33FJ256GP710 devices mounted on plug-in modules for quick replacement.
Also included with the kit is Microchip's MPLAB Integrated Development Environment (IDE), the Student Edition of the MPLAB C30 C Compiler for Microchip's 16-bit devices, with tutorials and user manuals on CDROM. The complete kit introduces the developer to Microchip's new family of 16-bit microcontrollers with all the tools for writing code in C, hardware debugging the application and programming devices.

dsPIC® Starter Kit

MICROCHIP New

This starter kit is a complete hardware and software tool suite for exploring applications based upon dsPIC DSCs.The board is designed with a dsPIC33FJ256GP506 DSC that has 256 KB of flash memory, a high-fidelity audio codec, microphone input and headphone/speaker outputs, and is powered from the USB connection to the PC. Also on the board are reconfigurable switches, potentiometers, a temperature sensor and a 4 Mb serial EEPROM to store data such as audio samples.

Features:
- Integrated debugger / programmer
- USB powered
- dsPIC33FJ256GP506 DSC with 256 KB Flash and 16 KB RAM
- 16/24/32 bit codec with a maximum sampling frequency of 48KHz
- Low cost audio capture and play back circuitry using the 12 bit ADC and PWM Audio
- Microphone and line level inputs with adjustable input gain
- 100mW headphone amplifier with digital volume control
- 2 switches and 3 LEDs for user application purposes
- 4 Megabit serial flash memory for application use
- Temperature sensor

dsPICDEM™ 1.1 General Purpose Demonstration Board

The dsPICDEM™ 1.1 General Purpose Demonstration Board provides the application designer with a low-cost development solution to become familiar with the dsPIC30F 16-bit DSC architecture. The development board serves as an ideal prototyping tool to quickly develop and validate key design requirements.

Features:
Key features of the dsPICDEM 1.1 General Purpose Development Board include:
- dsPIC30F6014 Plug-in Sample
- Serial Communication Channels Interface(two UARTs, SPI™, CAN, RS-485)
- Si3000 Voiceband Codec with MIC In/Speaker Jacks
- General Purpose Prototyping Area with Expansion Header
- 122 x 32 Dot Addressable LCD
- MPLAB® ICD 2 and MPLAB ICE 4000 Emulator support
- LED's, Switches and Potentiometers
- Temperature Sensor
- Separate Digital and Analog Voltage Regulators
- Digital Potentiometer for DAC Capability
- RS-232 Cable and Power Supply
- Example Software and Documentation on CD

dsPICDEM 2 Development Board

The dsPICDEM 2 Development Board is a development and evaluation tool that helps create embedded applications using dsPIC30F Digital Signal Controllers. Sockets are provided for 28 and 40-pin devices in the motor control family and 18, 28 and 40-pin devices in the general purpose and sensor family.

Kit Contents:
- dsPICDEM 2 Development Board w/ dsPIC30F4011 installed
- CD with documentation and sample application programs
- Sample pack containing dsPIC30F3012 and dsPIC30F4013

Board Features:
- Multiple sockets for 18, 28 and 40-pin PDIP and SPDIP devices
- dsPIC30F4011 40-pin PDIP sample device installed on the board
- 5V regulator provides VDD and AVDD from a 9V DC power supply
- Supports MPLAB ICD 2 In-Circuit Debugger and MPLAB ICE 4000
- RS-232 and CAN interfaces
- Temperature sensor and analog potentiometer
- 2 push button switches and 2 LED indicators
- 2x16 ASCII Character LCD with SPI interface
- Access to all pins on the dsPIC30F device sockets via 2x40-pin headers

16-Bit 28-Pin Starter Board

This low-cost, 16-bit, 28-pin Starter Development Board supports 28-pin PIC24 microcontrollers or dsPIC Digital Signal Controller (DSC) devices. This board is an ideal prototyping tool to help validate key design requirements using these microcontrollers and DSCs.

Features
- Prototyping tool for all 28-pin, SDIP PIC24, dsPIC30F and dsPIC33F devices
- On-board regulators for 3.3V or 5V operation
- Power input from 9V power supply or USB power source
- Single UART communication channel via USB bridge
- Connectors for MPLAB® ICD 2 In-circuit Debugger/Programmer and PICkit™ 2
- Header for access to all device I/O pins
- Circuit prototyping area including pads for SOIC and SOT-23 devices

Contents:
- 16-bit, 28-pin Starter Board
- 28-pin PIC24FJ64GA002 device
- USB cable
- Example software and documentation on CD

PICDEM MC LV Development Board

The PICDEM MC LV Development board is a development and education tool that provides designers with a quick and cost-effective method to evaluate both sensored and sensorless brushless DC (BLDC) motor control. Users can create embedded motor control applications using MICROCHIP's 28-pin PIC18F microcontrollers and dsPIC30F Digital Signal Controllers.

Features & Benefits:
- Capable of driving motors up to 48V, 2.2Amps
- 3-phase voltage source inverter bridge
- Temperature sensor with I^2C interface
- MPLAB ICD2 connector
- Active RS232 connector
- Speed control potentiometer
- Test points for motor current and back EMF sensing
- Optional 3-phase, 24V BLDC motor and 24V external power supply available

Kit Includes:
- PICDEM MC LV Development Board with pre-programmed (BLDC firmware) PIC18F2431 and dsPIC30F3010 devices
- Software and Documentation CD containing Motor Control GUI (MC-GUI), User's guide and sample applications programs

dsPICDEM™ MC1 Motor Control Development System

The Motor Control Development System provides the application developer with three main components for quick prototyping and validation of BLDC, PMAC and ACIM applications. The three components are: dsPICDEM MC1 Motor Control Development Board,dsPICDEM MC1L3-Phase Low Voltage Power Module and dsPICDEM MC1H 3-Phase High Voltage Power Module.
The dsPICDEM MC1 Motor Control Development Board contains the dsPIC30F6010 but supports all dsPIC® MCU motor control variances, various peripheral interfaces and a custom interface header system, which allows different motor power modules to be connected to the PCB. The dsPICDEM MC1L 3-Phase Low Voltage Power Module is optimized for 3-phase motor applications that require a DC bus voltage less than 50 volts and can deliver up to 400W power output. The 3-phase low voltage power module is intended to power BLDC and PMAC motors.

The dsPICDEM MC1H 3-Phase High Voltage Power Module is optimized for 3-phase motor applications that require DC bus voltages up to 400 volts and can deliver up to 1 kW power output. The high voltage module has an active power factor correction circuit that is controlled by the dsPIC30F device. This power module is intended for AC induction motor and power inverter applications that operate directly from the AC line voltage.

Features:
- High Voltage or Low Voltage Power Module
- dsPICDEM MC1 Motor Control Development Board with Pre-programmed dsPIC30F Device
- Heatsink for Ambient Cooling of Power Sections
- Full Automatic Protection of Power Circuits
- Electrical Isolation from Power Circuits
- Many Options for Motor Feedback Signals
- Example Software and Documentation on CD

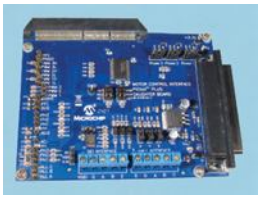
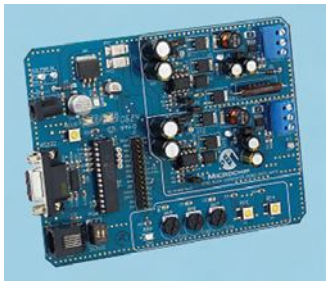
Motor Control Development



DM330021

MA330013

The dsPICDEM™ MCLV Development Board (**DM330021**) provides a cost-effective method of evaluating and developing sensored or sensorless brushless DC (BLDC) and permanent magnet synchronous motor control applications. The board supports the 100-pin to 100-pin dsPIC33FJXXXMCX10 Plug-In Module (**MA330013**) with a dsPIC33F Motor control device (U9) socket.



AC164128

The Motor Control Interface PICtail Plus Daughter Board (**AC164128**) is a bridge board that connects the Explorer 16 Development Board to the 3-phase power modules, and is used in motor control applications involving the dsPIC33F family of motor control devices. It has a variety of test points that will make debugging applications easier. It also has hardware support for sensor and sensor-less applications such as Hall sensors, optical encoder, back EMF and current sensing.

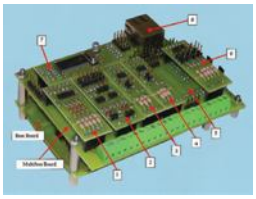
dsPICDEM SMPS Buck Development Board

This dsPICDEM SMPS Buck Development Board provides an easy way to evaluate the dsPIC30F202x/1010 SMPS & Digital Power Conversion family of components and provides an educational and prototyping platform to investigate digital power conversion and digital Switch Mode Power Supply (SMPS) design. The board includes a socketed dsPIC30F2020 device connected to power devices and circuitry for controlling dual independent low power DC to DC Synchronous Buck Converter circuits as well as support, debug, and communication circuitry.



Features:

- Socketed dsPIC30F2020 on board connected to power devices and circuitry for controlling dual independent low power DC to DC Synchronous Buck Converter circuits
- Buck converters can operate in Synchronous or Asynchronous modes
- Input voltage range 7V to 15V (nominal 9V)
- User can enable a dynamic output load to investigate transient response
- User potentiometers to simulate application features such as voltage trim, remote voltage sense, voltage tracking, current sharing, etc.
- MPLAB® ICD 2 or REAL ICE support ready
- RS-232 serial channel
- Example software for implementing digital dual synchronous buck converter, educational material, and documentation on CD

FLEX Base Boards, Daughter Boards & Modules

1 - Serial port 1
2 - Serial port 2
3 - CAN port 1
4 - CAN port 2
5 -Shown as blank
6 - SPI port (channel selectable)
7 - 10Mbit Ethernet module
8 - RJ45 Ethernet connector

The FLEX Base Board is designed to export all the connections of a standard Microchip dsPIC Digital Signal Controller. The board connections use the standard 2.54mm pitch which makes it easy to use custom, home-made daughterboards. It has robust electronic design, modular architecture and full support of Erika Enterprise real-time kernel from Evidence Srl.

- The FLEX Light Base Board has been designed to be as compact as possible. It uses simplified power supply circuitry and has no integrated USB programming capability. Power to the FLEX Light Base Board must be in the range of 9 - 12V.
- The FLEX Full Base Board integrates an extra-robust power supply circuitry, which allows the usage of a wide range of power supplies. It accepts voltage ranging between 9 and 36 volts. The power supply signal is filtered and regulated to the internal levels. It is protected by a resettable fuse. The board also features an USB port that can be used for data transfer.

A FLEX Daughter Board is a board with specialised features that can be inserted on top of a FLEX Base Board to obtain complex devices for all possible applications.
FLEX is designed as a modular development system. Peripheral functions can be added by connecting the FLEX Multibus Daughterboard and adding any or all of the following modules:

- FLEX Ethernet Module
- FLEX RS232 Module
- FLEX RS485 Module
- FLEX RS422 Module
- FLEX CAN Module
- FLEX SPI Module
- FLEX Serial TTL module

FLEX Plug-in Modules are mounted only if needed. For example, if the application requires the Ethernet interface and the connection to the CAN bus, only the corresponding plug-ins will be mounted on the Multibus board, leaving the remaining pins free for other uses. Alternatively, a custom circuit can be created with the FLEX Thru Hole Prototyping Daughterboard.

PIC32 USB Starter Board

The PIC32 USB Starter Board provides the easiest and lowest cost method to experience the USB On-The-Go family of PIC32 microcontrollers. Users can develop USB embedded host, device, dual-role, or On-The-Go applications by combining this board with free USB software (On-The-Go support provided in a future software release). The kit includes the PIC32 USB Starter Board, a standard A to mini B cable for debugger & a standard A to micro B cable for USB application development.

Features:

- PIC32MX460F512L 32-bit microcontroller
- Green power-indicator LED
- Regulated +3.3V power supply for powering the starter board via USB or expansion board
- On-board crystal for precision microcontroller clocking (8 MHz)
- USB connectivity for on-board debugger communications
- PIC18LF4550 USB microcontroller for on-board debugging
- Orange Debug indicator LED
- Three push-button switches for user-defined inputs
- Three user-defined indicator LEDs
- Connector for various expansion boards (on the underside of board)
- USB Type A receptacle connectivity for PIC32MX Host based Applications
- USB Type Micro-AB receptacle for OTG and USB Device connectivity for PIC32MX OTG/Device based Applications (on the underside on board)
- USB Host and OTG power supply for powering PIC32MX USB applications

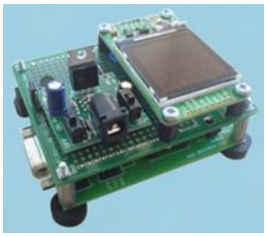
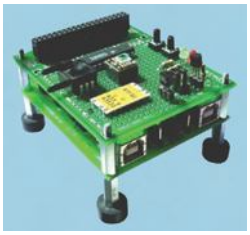
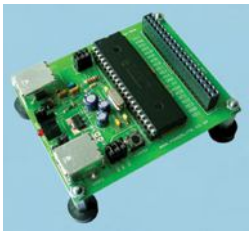
Flash Lab and USB MicroStak Dev Kit



POWERLITE SYSTEMS



Flash Lab



Proto Board

Stacked Board Example

USB MicroStak Stacked Board Example

USB MicroStak

This PC104 style PIC microcontroller development system is based around the Flash Lab Main Board with RS232 connectivity. It is then combined with a choice of Bootloader PICs and 1 or more Flash Lab Prototype Boards.
Mecanique Microcode Loader software is included and bootloader firmware in the on board PIC. This means that no hardware programmer is needed to programme the PIC, only a serial connection to a PC and a standard *.hex file.
Terminal strip breadboards can also be mounted on top of the prototype board or on the bench for quick circuit design and testing. Finished circuits can then be constructed directly on the modular, stackable prototype boards.

The Flash Lab Proto Board is an unpopulated matrix board for inclusion of custom specific circuitry. Both boards carry a gold plated 40 pin PC104 stackthrough connector which enables the interconnection of all the PIC microcontroller I/O between the main board and any number of stacked prototype boards. Spacers are provided to enable the a solid stack assembly to be constructed which can be used for experimentation and as a finished working project.

The USB MicroStak is an alternative to the Flash Lab mainboard and provides USB to Uart rather than RS232 interface connectivity, via the USB1 connector. Like the Flash Lab, no hardware programmer is required and the same prototyping boards used with Flash Lab can be used with USB MicroStak. In fact most circuits assembled on a prototyping board can be used with either mainboard. A second USB socket, USB2, optionally allows use of the on board USB port of a suitable pic. All software for bootloading and USB to Uart virtual COM port drivers is supplied.

Flash Lab Features:
- Rapid PC104 style prototyping with plug and play modular architecture
- Includes software to program your application over a serial connection MAX233 serial interface
- 3-pin header for direct access to serial port DTR, TX and RX signals
- Auto-reset enable/disable jumper for boot-loader programming
- Gold contacts on pass-through I/O connections for superior electrical contacts
- Header posts for connecting any I/O-pin to direct/buffered RS-232 signals

USB MicroStak Features:
- USB1 connector for bootloader programming
- USB2 connector for using PIC on board USB port
- Powered by USB1 or USB2 bus or external 5V supply
- On board voltage selectable for 5V or 3.3V
- Main board can be 5V, proto board 3.3V for example
- 40 pin PC104 stackthrough gold plated connections

PicBlock MC28AD-USB

POWERLITE SYSTEMS

Features:
- All I/O lines available
- 8 500mA open collector outputs
- ICSP header
- RS232 connector for serial comms or boot-loading
- Independent pull-up options on the O/C outputs
- Onboard reset button and external restart option via RS232
- Onboard regulator or external 5V power option
- USB powered facility

The MC28AD-USB provides direct access to PORTA, PORTB and PORTC. PORTB is also used to drive an 8 way darlington driver providing 500mA open collector outputs with optional pull-up resistors. An ICSP header is provided as is an RS232 connector for serial comms or boot-loading. When using a suitable PIC, USB connectivity is available via an on-board USB-B socket. Both RS232 and USB connections are selectable, as is the option to power the board via the USB socket, an existing 5V supply or the on-board 5V regulator from a higher DC voltage.

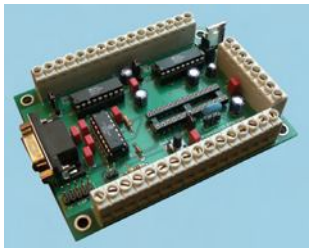
These populated boards are high quality PCBs designed to accept 18 or 28 pin DIL (subject to board selected) PIC or SCENIX microcontroller. Their use is not only confined to being a development board but also due to the features on board, they can also be integrated into a system as a finished product. The PicBlock has an on-board power supply section, input conditioning, output drive of 500mA per channel and all connections are via PCB mounting screw terminals.



Features:
- Buffered and filtered inputs to cope with a range of input voltages and noisy environments. Input voltage range 3 to 24V DC
- Open collector digital outputs each capable of sinking 500mA
- Power source can be AC 7-20V, or DC 9-28V. A low current regulated 5V supply is available to power external circuits
- An on-board reset button is provided as is space for output pull-up resistors should they be required
- On board 4MHz resonator
- PCB construction all PTH and ground planed on both sides
- Dimensions (18 pin) 81 x 66 x 22mm (28 pin) 104 x 75 x 26mm with 4mm mounting holes

POWERLITE SYSTEMS

PicBlock MC28AD-16

The MC28AD-16 is designed for use with 28-pin Microchip PIC chips and is the most versatile product in the PicBlock range so far.
Serial input latched drivers have enabled 16 open collector outputs requiring the use of only 4 of the PIC chip's I/O lines. This enhances the I/O capability of a 28-pin device to 32 while still maintaining functionality.

Features:
- 16 uncommitted I/O lines
- 16 500mA open collector outputs
- ICSP header
- RS232 connector for serial comms or boot-loading
- Independent pull-up options on the O/C outputs
- Onboard reset button
- Reset via RS232 connection
- Onboard 5V regulator or external power option

E-Block Development Boards

matrix multimedia

Matrix Multimedia introduces a wide range of E-Block development boards which are a compacted all-in-one solution to learning microcontroller programming. The kits include everything you need to start to program PIC microcontrollers using flow charts.

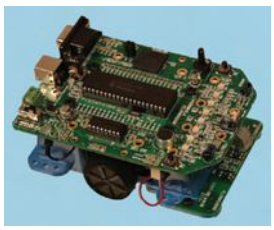
477715

PICmicro MCU C Programming Pack

matrix multimedia

New

This solution is perfect for low cost entry into PICmicro development for engineers who need to get up to speed with microcontroller system development using C. The pack is supplied with a PIC16F88 device and a spare 877A chip. It is fully compatible with the range of E-block accessories.



Kit Includes:
- USB PICmicro microcontroller multiprogrammer
- LED E-block (8 leds)
- Switch E-block (8 switches)
- LCD E-block (2 line 16 character)
- USB cable
- Power supply
- C for 16 series PICmicro microcontrollers CD ROM

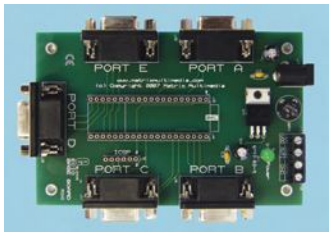
Formula Flowcode Maze Solving Buggy

matrix multimedia

New

This maze solving robot has been designed to provide a motivating platform for learning robotics for all ages. The robot addresses the requirements of technology education in schools and colleges and the electronic circuit board can also be used for mechanical projects at 16+.
It uses an advanced PICmicro 18 series microcontroller with internal precision motor controller circuitry, has 3 infrared distance sensors, line following sensors on a separate circuit board, a speaker, audio level sensor, light sensor, two spare switch inputs, 8 user programmable LEDs, and various expansion buses - including an E-blocks port.



Features:
- Flowcode graphical programming software
- USB programmable
- High technical specification
- Micromouse competition compatible
- Can also be programmed in C and Assembly
- A2 line following track is provided

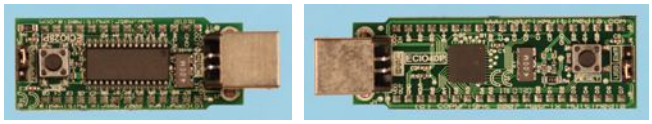
E-Block ECIO Application Board

matrix multimedia

New

The ECIO application board adds E-blocks compatibility to the ECIO 28 and 40 pin devices. The application board provides up to 5 E-blocks ports which allows the user to attach a wide range of E-blocks boards - from simple LED and switch boards through to Bluetooth, IrDA and Internet communications baords.



Features:
- Adaptor for E-blocks
- 5x E-blocks ports

ECIO™ Programmable Microcontrollers

matrix multimedia

New

The ECIO family of USB programmable microcontrollers provides an incredibly simple way of adopting microcontroller technology into projects. The device behaves just likea normal microcontroller, but when connected to a USB lead a simple press of the reset switch allows a new program to be sent to the device. There are two products in the range: ECIO-28P and ECIO- 40P. These devices are based on PICmicro 18 series devices - the 18F2455 and the 18F4455 respectively.

Features:
- Programmable from USB
- Compatible with a free version of Flowcode
- Includes bootloader software
- Can draw power from USB

Flowcode 3 development board HP34SI3

matrix multimedia

This pack consists of Flowcode3, a PICMicro microcontroller development board with USB cable and power supply and a spare PIC16F877A chip. This pack is designed for those who want to develop electronic and robotic projects based on PICmicro microcontrollers. This software allows you to quickly develop sophisticated electronic systems based on flow charts. The V3 development board (with USB connection) can be used to both program PICmicro MCU devices and as a development platform for experiments and tutorials. The retail price of this pack is at a significant discount to the sum of the individual parts.

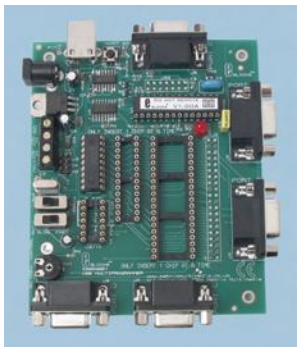
E-blocks Microcontroller Development Board HP488



- Connects to USB port
- Compatible with 3 CD ROM based courses
- Download software, PPP, included
- Programs a wide range of PICMicro MCU devices
- E-blocks compatible

This flexible development board is an ideal platform for learning and project development.The board will program a range of 8, 18, 28 and 40 pin PICmicro® microcontroller devices from the 12, 16 and 18 series PICmicro range. The board is programmed using the USB port (from which it can also take power) and is supplied with a comprehensive programming utility - PPP. The board is ideal for using in conjunction with one of our 3 PICmicro CD ROM resources to help learn PICmicro programming using flow charts, C or assembly code. The board can program Low Voltage Programmable PICmicro MCUs and deliver a limited amount of power using only the USB supply, but we recommend that an external power supply (product code HPPSU2) is used to take maximum advantage of the board's features. The board is compatible with our range of E-blocks modules which contain circuitry for a wide range of functions - from simple switches and LEDs, through to internet servers, and Bluetooth transceivers. The board is also compatible with Microchip's In Circuit Debugging (ICD) system.

E-blocks™ PICmicro® Microcontroller Programmer

This new PICmicro® microcontroller programmer connects to your PC via USB to provide you with a low cost flexible PICmicro microcontroller programmer for development and programming use. This board can be used with Assembly, C or Flowcode programming utilities. The board will program a range of 8, 18, 28 and 40 pin PICmicro® microcontroller devices from the 12, 16 and 18 series PICmicro® range, using the programming software provided. The board takes power from an external power supply or from the USB port. A microchip ICD2 socket is fitted for debugging advanced projects. A PIC16F88 device is included. A complete customised training solution can be built using this board and several E-blocks.

CD-ROM for C PIC16 Series

The C for PICmicro microcontrollers CD ROM is designed for those who need to learn how to program embedded microcontrollers in C. The CD contains a full course as well as all the software tools needed to create hex code for a wide range of PICmicro devices - including a full C compiler and an Integrated Development Environment (IDE). The compiler on this product is for educational use only. Those wanting to produce commercial products using the compiler will need to purchase a commercial licence of the Boost C compiler included on the CD ROM. This new version is designed with the PIC16F88 in mind. This product is designed to work seamlessly with the E-blocks Multiprogrammer and Version 3 development board, but will also operate with third party programmers.

- Includes a new version of our C compiler and IDE
- New analogue sections
- Compatible with most PICmicro programmers
- Highly interactive course

CD-ROM for C PIC16 Series	EL543SI	138-2365	85.00

Assembly for PICmicro® Microcontrollers

The Assembly for PICmicro microcontrollers CD ROM (previously known as PICtutor) contains a complete course in programming the PIC16F84 microcontroller from Arizona Microchip. It starts at a level that the complete beginner will find intelligible, and includes 39 tutorials that take you right up to an advanced level of competence - including discussion and examples of watchdog timers, interrupts and sleep modes. Tests and exercises are provided at every stage of the course to help students ensure that they have grasped one topic before moving on to the next. The CD makes use of the latest simulation techniques which provide a superb tool for learning: the Virtual PICmicro MCU. The Virtual PICmicro microcontroller is a simulation tool that allows users to write and execute assembler code for the PIC16F84 microcontroller on-screen. Using this students can actually see what happens inside the PICmicro MCU as each instruction is executed. This highly visual approach makes learning and debugging much easier than using conventional text-only simulators. The Assembly for PICmicro microcontrollers CD ROM includes an assembler and send package that allows students to download each tutorial program onto the complementary development board.

- Comprehensive instruction with over thirty tutorials
- Includes a Virtual PICmicro microcontroller fully functioning simulator
- Tests, exercises and projects covering a wide range of PICmicro MCU applications
- Includes shareware assembler and download programs

PIC Trainer Project Boards

These populated boards are ideal for prototype evaluation and for learning PIC programming. The boards have been designed so that the user can start with a working PCB to reduce development time. The project boards are supported by 'The Engineers Guide to Programming PICs' book, Order Code 183-143. PIC Trainer 1 refers to program examples with some code modifications shown in the last chapter.

PIC Trainer 1 Features push button inputs and LED outputs with provision for a ULN2803 Darlington driver.

- Suitable for 18-pin devices (16C54, 16C56, 16C71 and 16C84)
- Socket provided for a Darlington driver (ULN2803)
- 4 input switches connected to port A
- 8 LEDs connected to port B

Microcontrollers and Microprocessors - 8/16/32-Bit - MICROCHIP - Development Tools - continued

PIC Trainer Project Boards - continued

- Suitable projects include push button switching, LED pattern generator, delay timers and logic replacement

PIC Trainer 2 Features 4 x 3 data entry keypad, 4 push button inputs and 4 seven segment display drivers.

- Suitable for 28-pin devices (16C55 and 16C57)
- 4 x 3 keypad connected to ports A and B
- 4 input switches connected to port B
- 4 x 7 segment LED displays connected to port B
- Suitable projects include digital clock, simple calculator, key scan and HEX to 7 segment display

Both project boards have:

- ZIF socket for easy insertion of the PIC
- 4MHz crystal for 1µs instruction time
- 5V regulator and a diode to protect against incorrect voltage polarity

The two boards are also available in kit form, without the ZIF sockets.

MPLAB REAL ICE In-Circuit Emulator

MPLAB REAL ICE In-Circuit Emulator System is Microchip's next generation high speed emulator for Microchip Flash DSC and MCU devices.
It debugs and programs PIC and dsPIC Flash microcontrollers with the easy-to-use but powerful graphical user interface of the MPLAB Integrated Development Environment (IDE), included with each kit.
The MPLAB REAL ICE probe kit is supplied with a standard Probe Driver which uses a MPLAB ICD 2 type connector (RJ11) to connect to the target application.
The optional High Speed Probe Driver consists of two circuit boards (transmitter and receiver) that employ two CAT5 cables. Debug pins are driven using LVDS communications, and additional trace connections allow high speed serial trace uploads to the PC.

Features:

- Full speed emulation
- Fast debugging and programming
- Low voltage emulation down to 2.0 (2.0 to 6.0 range)
- Erase of program memory space with verification
- Read/Write program and data memory of microcontroller
- Over voltage/short-circuit monitor protection
- Capture trace to log instruction execution and variable contents
- Port trace for high speed upload of trace data
- Stop watch and Real time watch
- USB 2.0 high speed interface to PC (480 Mb/s)

Contents:

MPLAB REAL ICE base Probe Kit(DV244005) includes MPLAB REAL ICE and Standard Driver Board (Compatible with MPLAB ICD 2 RJ-11 connections)
MPLAB REAL ICE Performance Pak(AC244002), includes the High Speed Driver to replace Standard Driver Board for high speed LVDS communications, and a High Speed Receiver Board. The High Speed Driver Boards use a second connector for high speed trace upload.

MPLAB-ICE Real-Time Emulator

MPLAB-ICE is a high-performance, Real-Time In-Circuit Emulator for the PIC microcontrollers. The system is portable, light weight and connects to a portable or desktop PC parallel port. It provides a migration path for users of PICMASTER Probe kits. The system is designed for easy interchange of processor modules to allow emulation of different processors. MPLAB IDE with MPASM macro assembler, editor, symbolic debugger, project manager with built-in support for high-level languages are also included.

The MPLAB-ICE 2000 features include:

- Full speed Real-Time Emulation
- Programmable clock
- Low voltage operation
- Upto 65,535 breakpoints
- Assembly and C source level debugging
- Program memory emulation and memory mapping capability up to 64K words
- Real-Time trace with up to 32K deep by 128 bit wide buffer
- Trigger/break/trace on internal registers/RAM
- Complex breakpoints with advanced trigger features, including sequential events, AND/OR events, filtered trace, time between events and pass counts
- External trigger input and output for logic analyzer/scope interface
- Time-stamp trace feature
- Code coverage
- Supports all PICmicro package types

The modular system consists of:

- Emulator Pod
- Processor Module
- Device Adaptor
- Translation Socket

Supplied with a universal power supply (100 - 240V, 0.55 - 0.3A, 60/50Hz)UK (240Vac) power supply, 9V, 500mA. UK mains plug lead **439-319**. European mains plug lead **210-699**.

MPLAB ICE 4000 High Performance In-Circuit Emulator

MPLAB ICE 4000 is a powerful, full featured real-time In-Circuit emulator capable of debugging the most demanding real time systems.
The MPLAB ICE 4000 is intended to provide the product development engineer with a complete microcontroller design tool set for high end PICmicro microcontrollers Software control of the emulator is provided by the MPLAB integrated Development environment, which allows editing, building, downloading and source debugging from a single environment.
The MPLAB ICE 4000 is a premium emulator system providing the features of MPLAB ICE 2000, but with increased emulation memory and high speed performance for dsPIC30F and PIC18XXXX devices.

Features:
- Full speed emulation
- Low voltage emulation down to 1.8 Volts or device limit
- 64K deep X 216-bit wide Trace Memory
- Up to 2 MB of addressable memory
- Unlimited breakpoints
- Complex break, trace and trigger logic
- Multi-level trigger up to 4 levels
- 48- bit time stamp
- Stop watch
- External inputs
- External output to synch with other instrumentation
- USB port and parallel port connection to PC

'C' Compiler for PIC17/18

The MPLAB-C17 and -C18 are full-featured compilers compatible with MPLAB-IDE, which allows for quick movement between different development and debugging modes from software debugging with MPLAB-SIM to hardware debugging with MPLAB-ICE.
MPLAB-C17 and -C18, designed for PIC17Cxxx and PIC18Cxxx families allow for:
- Code to be written in high level 'C' language using PICmicro libraries
- Use of software stack for max RAM re-usability
- Optimal code space efficiency, without a stack
- User configurable interrupt support macros
- MPLAB-C17 and -C18 will run on any 386+, DOS 5.0+ or 32-bit Wins 95/NT executive

The development package includes:
- MPLAB-C17 or -C18 Compiler software
- MPLAB software
- Complete documentation
- Microchip CD-ROM with data, embedded control information and applications notes

MPLAB-C18 C compiler for PIC18Cxxx family	**315-4841●**	354.02

PIC C-Compiler

- Built-in libraries to work with all chips for RS232 serial I/O library, I/O, I^2C, discrete I/O and precision delays
- Integrates with MPLAB and other simulators/emulators for source level debugging
- Standard Hex file and debug files for all programmers
- Efficient function implementation
- Access to hardware features from easy to use C functions, Timers, A/D, E^2, etc.
- Assembly code may be inserted anywhere in the source and may reference C variables
- #Bit and #BYTE allows C variables to be placed at absolute addresses to map register to C variables
- Automatic linking for multiple code pages
- Both an Integrated editor/compiler and a CMD line compiler
- Special windows show the RAM memory map, C/Assembly listing and the calling tree
- Updates via modem for 30 days included

The C-Compiler for the Microchip PIC processors is fully optimised for these parts. Built-in functions make coding and software easy. The integrated C development environment allows for fast and efficient code from an easily maintainable high level language.

The compilers are available in two versions - command line compiler (PCB, PCM or PCH) and compiler with Windows IDE (PCWH).
The PCW C-Compiler for PICmicro contains both 'PCB' and 'PCM'.
The PCWH C-Compiler for PICmicro contains 'PCH'.
These types have Windows Integrated Development Environment and run under Windows 3.1, 95, 2000 and NT.

All versions include:
- Command Line Compiler
- Built-in Functions
- Program Examples
- Device Drivers
- MPLAB Interface
- Call Tree and Memory Map

C Complier - For the PIC

SourceBoost IDE is a modern development environment that allows rapid development of code. The code can be compiled under one of the SourceBoost compilers, or under under a third part compilers. SourceBoost IDE works under MS Windows 95/98/ME/NT/2000/XP.

Below are only a few IDE features
- Project management
- Syntax coloring, auto complete, value hover, function prototype tool tips etc
- Built-in debugger & profiler
- Open architecture Plugins system for virtual devices and components
- Support of different compilers
- Clock accurate simulator for PIC12, PIC16 and PIC18 targets

MPLAB® C30 Compiler

The MPLAB® C30 compiler is a full-featured ANSI compliant C compiler for the dsPIC30F family. MPLAB C30 is fully compatible with Microchip's MPLAB Integrated Development Environment (IDE), allowing source level debugging with the MPLAB ICE in-circuit emulator, MPLAB ICD 2 in-circuit debugger, and MPLAB SIM Simulator.

Features:
- ANSI compliant with standard, math, memory, data conversion and math libraries
- Generates relocatable object modules for enhanced code reuse
- Optimized for dsPIC30F to generate as much as 30% less code than other 16-bit MCU compilers
- Strong support for in-line assembly when total control is absolutely necessary
- Allows code and data to be located at absolute addresses
- Supports advanced code size optimizations
- ANSI compliant with standard, math, memory, data conversion and math libraries
- Generates relocatable object modules for enhanced code reuse
- Optimized for dsPIC30F to generate as much as 30% less code than other 16-bit MCU compilers

BASIC Pro Compiler

The professional version of the PicBasic compiler makes it even easier to program PIC microcontrollers. Many additional features are added and the compiler can also be used within Microchip's MPLAB IDE software.

Features:
- Direct and library access to any pin or register
- Automatic page boundary handling past 2K
- Bit, byte and word arrays
- Real **If...Then...Else...Endif**
- Hierarchical expression handling
- Interrupts in BASIC and assembler
- More variable space (processor dependant)
- In-line assembler and **Call** support
- MPASM / ICE compatibility
- Use in DOS or Windows

BASIC Stamp Development Kit

BASIC Stamp2 is a module that runs easy-to-read BASIC programs. Its features make it ideal for many prototyping and control applications and it is programmed from a standard PC. It becomes a fully autonomous unit once programmed. The Stamp is fully programmable up to 1,000,000 times with retaining capability even after powerdown.

The Kit comprises:-
- A manual covering programming language, examples/detailed applications, Stamp editor software for the PC (manuals may be updated)
- Stamp2 module and project board
- Programming cable

TEAleaf-USB Authentication Key

for Software Licensing and Revenue Protection

TEAleaf-USB is a low cost authentication system which may be used to verify that a software product is not an unauthorised pirate copy. The host processor uses a simple but robust algorithm to verify that a TEAleaf device is present, using a 128-bit encryption key.
TEAleaf-USB uses the Human Interface Device (HID) USB profile. It does not require USB drivers and is immediately plug-and-play compatible with present and future Windows, Linux and Mac operating systems.
TEAleaf-USB is firmware for the PIC18F2450 & PIC18F14K50 microcontrollers. They require only a few discrete components and are available in DIL and SSOP packages.

Features:
- True USB 2.0 HID plug and play - No drivers required
- Ultra low cost single chip solution
- Low speed USB, can use a low cost resonator
- No Vendor ID / Product ID registration required
- Authentication success indication
- All-Systems-Go indication
- Tx / Rx indication
- Low power indication
- 5 digital, analog, interrupt virtual I/O
- 122-byte EEPROM

USB-FileSys

Driver-Free USB Embedded File System

USB-FileSys is a low cost data USB FAT file system. It is a memory area which is easily accessed by a host controller using SPI commands, and, when plugged intoa USB port, appears on a PC like a file on a removable disk. USB-FileSys uses the Mass Storage Device (MSD) USB profile. It will work without drivers on PCs running Windows (ME or later), Mac (OS 9 or later) or Linux (4.0or later). USB-FileSys is firmware for the PIC18LF2455 and PIC18F14K50 microcontrollers. Available as pre-programmed 28-pin DIL package and a 20 pin SSOP package.

Features:
- SPI interface to host controller
- True MSD plug and play - No drivers required
- USB 2.0 compatible

Applications:
- Flash drives
- File transfer
- Device configuration & diagnostics
- Error logging

MPLAB® PM3 Universal Device Programmer

The MPLAB® PM3 Universal Device Programmer is easy to use and operates with a PC or as a stand-alone unit, and programs Microchip's entire line of PICmicro® devices as well as the latest dsPIC30F DSC devices.

The Key Features include:
- RS-232 or USB interface
- Integrated In Circuit Serial Programming™ (ICSP™) interface
- Fast programming time
- Three operating modes: PC Host mode for full control, Safe mode for secure data and Standalone mode for programming without a PC.
- Complete line of interchangeable socket modules to support all Microchip devices and package options (sold separately)
- SQTP™ serialization for programming unique serial numbers while in PC Host mode.
- Alternate DOS command line interface for batch control
- Supports PROMATE II socket modules via adapter (sold separately)
- Large easy-to-read display
- Field upgradeable firmware allows quick new device support
- Secure Digital (SD) and Multimedia Card (MMC)
- Buzzer notification for noisy environments

A Beginners Guide to the PIC – Revised Edition

Written by Nigel Gardner of Bluebird Electronics. The aim of this book/disk set is to give those who have never worked with the PIC a good understanding of its use. For those who have not programmed before guidance is given on how to get started and how to debug. Topics covered include an introduction to the PIC, software, hardware, problems/bugs etc and projects. The book is supplied with a 3½" disk providing assembler, simulator and source code examples.

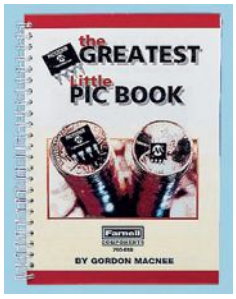
Following on from 'A Beginners Guide to The PIC' Nigel Gardner and Pete Birnie have compiled PIC Cookbook – Volume 1.

A collection of 40 working applications including:-

- Boat/caravan intruder alarms
- Magnetic swipe card reader
- PIR security centre
- Traffic light sequencer
- Radio control system
- Mains frequency indicator
- Car left/right/hazard timer
- Radar speed sensor interface



and many more...

Includes a diskette with source code for all the applications.

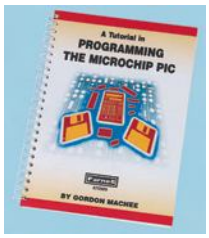
The Greatest Little PIC Book



The Greatest Little PIC Book, by Gordon MacNee, covers the new 8 pin PIC12C50x family from Microchip. This device is ideal for those applications requiring a few I/O lines. The book has been written to guide the potential user through the architecture, software modes and benefits derived from using the PIC12C50x. The book also covers development tools and is supplied with MPLAB (editor, assembler and simulator) to enable development under Windows. The book is rounded off with a number of worked examples including timers, sound generators, water descaler, data logger and light/motor control.

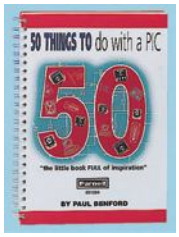
A Tutorial in Programming the Microchip PIC

This is an ideal book for those who have basic knowledge of microcontrollers, by the author of "The Greatest Little PIC Book" - Gordon MacNee and Paul Benford. The book leads the reader through a number of code segments that can be used as standalone blocks of code or integrated into other projects. It also covers programming principals and techniques for the PIC and configuration of the most popular peripherals. All code examples are on the accompanying 3.5 inch disk.



Code segments covered:

- USART set-up for RS232 communications in hardware
- How to communicate to a PC using software USART
- How to handle timers and interrupts
- ADC set up and use
- LCD interface
- An introduction to the MPLAB development environment

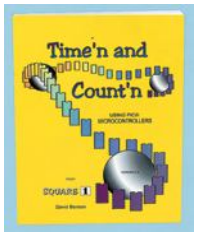
50 Things To Do with a PIC

In this his second lab book the author, Paul Benford, has sought to collect fifty design briefs and ideas using the latest PIC devices, to inspire the design engineer to look at many of the features available on the second and third generation PIC micros.

This work offers a total of 50 design ideas with full block diagrams, code examples and design tips. The author also explains the selection of the device and advantages in using the device.

The book is ideal for the design engineer wth some PIC experience and also for undergraduate project work. A Microchip CD-ROM is included.

Projects and designs include:



- Lighting controller
- Real Time Clock
- Personal Alarm
- Keyless entry
- Digital thermometer
- Auto baud detection
- Stepper motor control

... and many more.

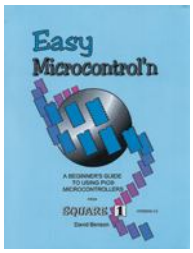
Time'n and Count'n

This book is a PIC microcontroller application guide written by David Benson, as a second intermediate level book. It updates the last edition entitled 'PIC'n Techniques'.It includes references to the more recent device revisions, the PIC16F870 and the In-Circuit Debugger (ICD).The author provides program examples with the aim to encourage the readers to write their own.



The book covers:

- Using timers
- Capture/Compare/PWM modules
- Timing and Counting experiments
- Designing and building test equipment such as keypad/LCD user interface, digital frequency generator and time interval measurement instruments
- References to programming listings/code, schematics and using ICD

The Engineers Guide to Programming PICs

- Detailed information on the 16C5x series with many examples of program code and illustrated with comprehensive tables showing the status of all relevent the registers as the code is executed
- A practical guide which is ideal for engineers who wish to learn to write programme code in a professional way
- Suitable for BTEC students as course learning material with many worked examples of each instruction so that the reader can easily follow the programmes
- A selection of real world problems for the reader to solve and so gaining confidence and experience of use
- How to use the PICSTART and MPLAB software

The Book shows how to;

- Initialize the PIC I/O, option and real time clock registers construct loops and delays
- Scan the input ports for keypad information
- Multiplex the outputs for LED displays
- Use logical instructions
- Use mathematical instructions and how to construct basic multiplication and division routines
- Put the PIC to sleep and wake it up again
- Use the watch dog timer
- Convert programs to run on the 12Cxx and 16C84

Also included is a decimal - hex - binary look up table and fold out reference sections

Microchip's Latest PICmicro® Microcontroller Product Line

Microchip provides solutions for the entire performance range of 8-bit and 16-bit microcontrollers, with a powerful architecture, comprehensive easy-to-use development tools, complete technical documentation and post design-in support.

All of the PIC® MCUs and dsPIC® DSCs support migration options that enable you in scaling your designs up or down.

Key factors enabling platform selection are:

- Complete portfolio: 6 to 100 pins, 382B to 256KB of program memory, up to 40 MIPS
- Upward compatible architectures to preserve investment in code development
- Pin copmatibility in multiple packages facilitates drop-in replacement
- Easy Migration from 8-bit MCUs to Best-In-Class 16-bit MCU and DSC Solutions

On Chip Peripheral Set

PIC microcontrollers offer a wide range of products with broad on-chip peripheral features including:

Communications Peripherals and Protocols:
- RS-232/RS-485
- SPI
- I2C
- USB
- Ethernet/TCP-IP
- CAN
- LIN
- Radio frequency

Control and Timing Peripherals:
- Capture/Compare
- Pulse Width Modulators (PWMs)
- Counters/timers
- Watchdog timers

Display Peripherals:
- LED Drivers
- LCD Drivers

Analog Peripherals:
- Up to 12-bit analog-to-digital (A/D) converters
- Comparators and op amps
- Brown-out detectors
- Low-voltage detectors
- Temperature sensors
- Oscillators
- Voltage references
- Digital-to-Analog (D/A) convertors
- Voltage regulators

Please consult out Development TOol Section for a full range of Microchip tools including the MPLAB® In Circuit Debugger, PM3® production programmer abd MPLAB® C Compilers.

For details on Microchip's range of OTP microcontrollers please refer to the mature PICmicro® products listing.

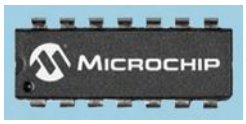
Baseline Architecture - 8 Bit Flash Microcontrollers 6/8/14/18/20/28 Pins

The Baseline Architecture includes the PIC10F family and portions of the PIC12 and PIC16 families. These devices utilise a 12-bit program word architecture with 6 to 40-pin package options. The concisely defined feature set of the Baseline Architecture enables the most cost-effective product solutions. A range of low operating voltages makes this architecture ideal for battery-operated applications.

The PIC10F2xx series provides another industry first, an inexpensive 8-bit Flash microcontroller in a 6-pin package. With only six pins, they are easy to use and have a short leaning curve for anyone not experienced in designing with microcontrollers. In addition, they can be used for a number of design challenges not traditionally solved by a microcontroller.

The PIC12 family packs Microchip's RISC-based, PIC microcontroller 12-bit program word architecture into 8-pin packages.



The PIC16F5X are well-established Baseline products, offered in 14, 18, 20, 28 and 40-pin packages.

While the Pic10F family is ideal for any space - constrained application, its combination of small form factor, high performance and extremely low cost is creating new applications not traditionally served by microcontrollers, e.g. Disposable Electronics, 555 Timer Replacement, Mechatronics etc.

Mid-Range Architecture - 8 Bit Flash Microcontrollers 8/14/18/20/28/40/44/64 Pins

The Mid-Range Architecture includes members of the PIC12 and PIC16 families that feature a 14-bit program word architecture. These families are available with 8 to 64-pin package options.

The PIC microcontrollers featuring Microchip's Mid-Range 14-bit program word architecture include interrupt handling, a deeper hardware stack, multiple A/D channels and EEPROM data memory.

They also feature various serial analog and digital peripherals, such as USB, SPI, I2C, USART, LCD and A/D converters.

New additions to the 8/14 Pin Midrange include the HV devices which incorporate an integrated shunt regulator allowing the ability to run from as low as 2.0V and up to an unspecified user - defined maximum voltage.

Microchip's 20 pin devices bridge the gap between the 18 and 28 pin variants by offering up to 18 lines of I/O if the onboard oscillator is used. The 16F785 and 16HV785 are notable 20 pin parts due to the inclusion of A/D converters, 2 high speed comparators and 2 Op Amps.

Microchip's 28 and 40 Pin Midrange variants continue to improve in functionality and performance whilst retaining their original footprints. Features such as the new dual comparators with S/R Latch mode can be used to replace 555 timers, simple op-amps, delta-sigma ADCs and other analog functions normally available in external ICs.

High Performance Architecture

Microchip's High Performance Architecture encompasses the PIC18 family of devices. These microcontrollers utilise a 16-bit program word architecture in 18 to 100-pin package options.

The PIC18 devices are high-performance microcontrollers with integrated A/D converters. All PIC18 microcontrollers incorporate an advanced RISC architecture that supports Flash devices. The PIC18 has enhanced core features, 32-level deep stack and multiple internal and external interrupts. The separate instruction and data buses of the Harvard architecture allow a 16-bit instruction word with separate 8-bit data. The two-stage instruction pipeline enables all instructions to execute in a single cycle, except for program branches, which require two cycles. A total of 79 instructions are available. The PIC18 family has special features such as intergrated CAN or Ethernet control, to reduce external components, thus minimising cost, enhancing system reliability and reducing power consumption. The PIC18 family builds on the foundation established by other 8-bit PIC microcontrollers and provides engineers with a smooth, easy migration path to these higher levels of performance and feature sets.

High Performance Product Features

- Expansive package offering - 18 to 100 pin
- Flexible Flash program memory, many devices with self-write capability
- Low pwoer capability on devices with nanoWatt techonology
- Linear program memory space up to 2 Mbytes
- 10-16 MIPS operating performance
- Hardware 8 x 8 multiplier
- Advanced communication peripherals and protocols (CAN, LIN, USB, Zigbee, and TCP/IP)
- J-Series for competitive cost sensitive applications with high memory densities
- K-Series for new level of performance in 8-bit MCUs

RL Re-reeling available

Farnell

Microcontrollers and Microprocessors - 8/16/32-Bit - MICROCHIP - continued

General Purpose PIC18F High Performance 8 Bit Flash Microcontrollers - 10 Mips

The 18F1220 and 18F1320 provide a powerful upgrade path from the existing PIC 16, 18 pin footprint, further enhanced variants can be seen in the Motor Control section - below.

The 28 and 40 pin 18F family now includes the 'J' series for cost sensitive applications with high memory densities , in addition the 'K' series provides new levels of performance (16 MIPS) whilst being very cost sensitive at lower memory densities.

Microchip's High Pin Count 18F devices become even more competitive with the addition of the 'J' series .In addition, many parts now include Nanowatt technology which provides flexible power management features that give users the ability to design systems within extremely constrained power budgets.

Motor Control Pic18F High Performance 8 Bit Flash Microcontrollers - 10Mips

Specialised peripherals including Motor Control PWM, Enhanced Capture / Compare Modules and QEI provide this 18F family with the capability to control a wide range of motor types including Stepper, BLDC, AC Induction, Brushed DC and Switched Reluctance.

USB Connectivity Pic18F High Performance 8 Bit Flash Microcontrollers - 10 Mips

A fully featured USB communications module supports both low speed and full speed (up to 12Mbits/sec) communication for all supported data transfer types. To ease development Microchip provide a selection of USB drivers via their website.

Ethernet Connectivity Pic18F High Performance 8 Bit Flash Microcontrollers - 10Mips

The 97J60 family is targeted at the embedded control market. The already feature rich 'J' device incorporate an Integrated Ethernet MAC and PHY, combined with Microchip's free TCP/IP software stack, a complete Ethernet solution is provided for adding remote monitoring and control to embedded applications.

LCD Drive Pic18F High Performance 8 Bit Flash Microcontrollers - 10 Mips

On chip LCD driver control for between 128 and 192 LCD segments is added to these 18F parts, These parts can drive an LCD display even when asleep due to sophisticated power managed modes. Pins can also be used for general I/O purposes and analog peripherals.

Integrated CAN Pic18F High Performance 8 Bit Flash Microcontrollers - 10 Mips

The addition of the ECAN (Enhanced CAN) bus module and a LIN (Local Interface Network) compatible UART to these 18F devices provides a strong reason to consider these parts for Automotive applications or other areas where CAN or LIN is used.

16 Bit Flash Microcontrollers

Microchip offers two 16-bit Microcontroller (MCU) families plus two 16-bit Digital Signal Controller (DSC) families that give you compatible options across a wide spectrum of price, performance and feature sets. Common attributes among all 16-bit MCU and DSC families are pinouts, software, peripherals and development tools. Whether your design requires the lowest-priced 16-bit solution, the most powerful 16-bit MCU in the industry, or DSP capability, Microchip offers a broad range of products while preserving the compatibility that help save you time and money on subsequent designs.

- On-Chip Oscillator
- Reliable Watchdog Timer
- On Chip System Clock Monitor
- Extended Temperature Variants
- High Current I/O
- Power Save Modes
- Low Jitter PLL
- On Chip Power - on Reset and Brown Out Reset

dsPic30F 16 Bit Flash Digital Signal Controllers - 30 Mips - Vdd 2.5v - 5.5v

General Purpose Family

The dsPIC 30F General Purpose family is ideal for a wide variety of 16 bit embedded applications. Variants with codec interfaces are well suited to speech and audio applications.

dsPic33F 16 Bit Flash Digital Signal Controllers - 40 Mips Vdd 3.0v - 3.6v

General Purpose Family

The 40 MIPS dsPic33F family is developed for high performance embedded control applications, compared to the dsPIC30F family, the dsPIC33F family offers larger RAM and Flash memory options and adds DMA.

Motor Control and Power Conversion Family

RL Re-reeling available

Microcontrollers and Microprocessors - 8/16/32-Bit - MICROCHIP - continued

dsPic33F 16 Bit Flash Digital Signal Controllers - 40 Mips Vdd 3.0v - 3.6v - continued

Motor Control and Power Conversion Family - continued

In addition to motor control applications this family is also well suited to UPS, Inverter and PFC applications.

Pic24F 16 Bit Flash Microcontrollers - 16 Mips - Vdd 2.0v - 3.6v

With 16 MIPS performance and an extensive peripheral set, the PIC24F MCUs are a highly cost effective solution for all but the most demanding 16 bit applications. The Pic24F also offers an easy migration path for design engineers whose applications have outgrown the performance offered by 8-bit MCUs.

Pic24HJ 16 Bit Flash Microcontrollers - 40 Mips - Vdd 3.0 - 3.6v

The PIC24H offers 40 MIPs performance, more memory and additional peripherals. The PIC24H family adds up to 2 CAN communication modules and a user - selectable 10/12 bit ADC. Integrated DMA (Direct Access Memory) between peripherals and dual-port RAM provides zero overhead data transfers.

RL Re-reeling available

Microcontrollers and Microprocessors - 8/16/32-Bit - MICROCHIP - continued

PIC32 High Performance Flash 32 bit Microcontrollers - upto 1.5 DMIPS/MHz - MIPS M4K Core

Building on the heritage of Microchip Technology's world-leading 8 and 16 bit PIC® Microcontrollers, the PIC32 family delivers 32 bit performance and more memory to solve increasingly complex embedded system design challenges.

- Upto 512 Kbytes Flash with pre-fetch cache
- Upto 32 Kbytes RAM
- Fast interrupts and context switch
- Extensive analog and digital peripherals
- 4 channel DMA with CRC
- 16 bit parallel masterport
- Uses MPLAB® development tools incldng ICD2 and Real ICE
- Pin & Peripheral compatible with 16 bit PIC® microcontrollers
- Peripheral libraries compatible 16 bit PIC® microcontrollers
- Free TCP/IP , Graphics File system source code
- 16 channels of 10 bit ADC
- Each part features 2 UARTs / 2 SPI / 2 I2C™ ports

Microchip's Mature PICmicro® Microcontroller Product Line

This section features Microchip's Mature PICmicro® Microcontroller Product Line.

These Mature Products are NOT recommended for new designs. (Microchip do not have any current plans to make these parts obsolete)

For new designs please consult the previous section of this catalogue, where the latest, more cost effective PICmicro® are featured.

Farnell In One offer a wide range of PICmicros.
We can support existing families from stock and continue to bring the newest generations of PICmicros to market.

To compliment this portfolio, Farnell offers a comprehensive range of development tools from Microchip and 3rd party vendors.

Microcontrollers and Microprocessors - 16/32-Bit ATMEL

AVR ONE! Debugging & Programming Kit

The AVR® ONE! is a powerful development tool for on-chip debugging and programming of all AVR32 devices. In the future AVR ONE! will also support all AVR devices.Suppported debug interfaces are JTAG (IEEE 1149.1), debugWire, PDI and the Nexus (IEEE-ISTO 5001(TM)-2003) auxiliary interface for high-speed trace. Supported programming interfaces are ISP, JTAG and PDI. Interfaces with AVR32 Studio 2 and newer.

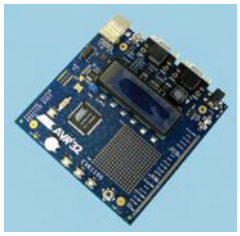
ATSTK1000 Development Kit



The STK1000 provides a complete development environment for Atmel's AT32A7000 processor.
A pre-installed Linux image ensures that the user can boot Linux and start program development directly after power up.

Board Features:
- 256 MB SD card
- Two ethernet ports
- One QVGA LCD
- One loudspeaker
- AVR JTAG/ICE mkII
- Connectors for USART, PS/2, VGA, and USB

ATEVK1100 Evaluation Kit

The ATEVK1100 is an evaluation kit and development system for the AVR32 AT32UC3A microcontroller. It is equipped with a rich set of peripherals and memory making it easy to explore the full potential of the AVR32 devices.

Board Features:
- Supports the AT32UC3A
- Ethernet port
- Sensors: Light, Temperature, Potentiometer
- 4x20 Blue LCD (PWM Adjustable backlight)
- Connectors for JTAG, Nexus, USART, USB 2.0, TWI, SPI
- SD and MMC Card Reader

EVK1101 Evaluation Kit

The EVK1101 is an evaluation kit and development system for the AVR32 AT32UC3B microcontroller.
It is equipped with a rich set of peripherals, memory, and makes it easy to try the full potential of the AVR32 devices.

Features:
- Supports the AT32UC3B
- Sensors: Light, Temperature
- Connectors for JTAG, Nexus, USART, USB 2.0, TWI, SPI
- SD and MMC Card Reader

Microcontrollers and Microprocessors - 16-Bit CYAN

eCOG1X MCU Development Kits

The eCOG1X Development Kit has been designed to together with CyanIDE, to provide the embedded systems designer with a fully integrated development platform that enables them to quickly configure and develop their application.
Featuring a wide range of peripherals supporting and expanding the functions in the eCOG1X product family, the development kit is suitable for a number of embedded application areas including security, industrial monitoring and control, retail, building automation as well as many others.
As standard, the kit is supplied with a daughterboard for the superset variant eCOG1X14Z5.

Features:
- eCOG1X14Z5 MCU on daughterboard
- 8Mb external Flash, 8Mb external SRAM
- 128Mb SDRAM
- 10/100 Mbps Ethernet PHY
- USB2.0 Low/Full/High Speed OTG Interface
- Fourteen 12-bit SAR ADC inputs with 10,8 or 6 bit modes
- Dual 12-bit DAC outputs with max 4 μsec conversion time
- Support for ISO7816 smart card including SIM card holder
- 4 RS232 serial ports
- Audio CODEC
- 4 x 7 segment LCD

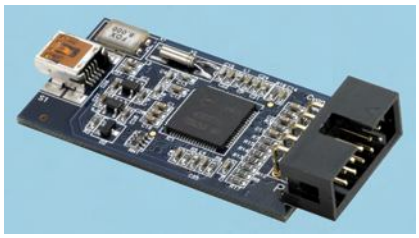
EVALKIT1XE01A6 & EVALKIT1X1A5 Evaluation Kits

Microcontrollers and Microprocessors - 16-Bit CYAN - continued

EVALKIT1XE01A6 & EVALKIT1X1A5 Evaluation Kits - continued



The EVALKIT1XE01A6 and EVALKIT1X1A5 are low cost development kits that enable rapid evaluation of Cyan's eCOG1XE01A6 and eCOG1X1A5 microcontrollers. The development kit also contains the CyanIDE toolset and high speed eICEUSB1X dongle which allow either board to be used as an entry level development system.
CyanIDE includes a full, unlimited, ANSI C compiler, source code editor, simulator, debugger and a unique Configuration Tool which massively reduces development time.

Target Board Features:
- Four serial ports, two with optional EIA/TIA-562 transceiver
- Four 12-bit analogue inputs
- Two user/status LEDs
- Hardware reset push button
- Free pads or pin headers for input and output port connections
- Powered from the eICE adaptor or from an external 5V d.c. power supply
- Small form factor
- High and low frequency crystals or clock inputs

USB eICE Adapter

The USB eICE adaptor provides a simple connection between a host PC system and an eCOG target board. It interfaces between the eICE debug port of the microcontroller and a USB port of the host PC. It is used to communicate between a PC and the user's own hardware during debugging and production programming.

Features:
- Onboard eCOG1X5A5 processor provides high-speed USB interface
- Handles complete eICE transactions locally, providing significantly faster data transfers and lower response times
- Connects to the host PC via a type A USB connector
- Provides full interface between USB and the eICE port of the target eCOG1 microcontroller
- Powered by the USB port of the PC, and can supply power to the target system from the USB 5V
- Fully compatible with CyanIDE®
- Simple 10-way header to allow easy connection to user's target system

eCOG Microcontroller Family

The **eCOG1X** product family is a range of low-power, feature rich microcontrollers based on a 16-bit Harvard architecture with a 24-bit linear code address space (32Mbyte) and 16-bit linear data address space (128Kbytes).The devices are highly configurable, with options including combinations of USB 2.0 OTG interface, 10/100 Mbps Ethernet MAC and 12-bit analogue I/O. Each variant is available with 512Kbytes of Flash and 24Kbytes of SRAM.
The **eCOG1XE01A6** is an entry level subset of the eCOG1X family. Offering smaller memory size and retaining just the most commonly used peripheral blocks, it targets price sensitive applications that still require a high level of capability in their microcontrollers. A major niche is in supporting slave node applications for RF-Solved based designs.
The **eCOG1kG** is a low-power microcontroller, based on a 16-bit Harvard architecture, with a 24-bit linear code address space (32Mbyte) and 16-bit linear data address space (128Kbytes).

Microcontrollers and Microprocessors - 16/32-Bit FREESCALE

HCS12 Development Kit

The HCS12 Development Kit is a tool for developing code and evaluating it on HCS12 "D" and "A" family MCUs. This kit combines the BDM Multilink and an evaluation board (EVB). The EVB simplifies user evaluation of prototype hardware and software by providing the essential MCU timing and I/O circuitry as well as a prototype area to allow custom interfacing. The BDM Multilink interfaces to the EVB through the 6-pin BDM connector for real-time In-Circuit Emulation and fast FLASH programming.

HCS12DP256 Evaluation Board:-
- MC9S12DP256 MCU allows evaluation of all HCS12 D & A derivatives
- 256 Kbytes on-chip Flash
- User prototyping area
- Header connectors for access to the microcontroller I/O and bus lines
- RS232 & CAN communication interfaces

BDM Multilink:-
- Universal development tool for all BDM HCS12 derivatives
- Real-time in-circuit emulation and debug
- Fast in-circuit programming
- Auto-detects target MCU frequency
- Small unobtrusive size (approx. 3"x2"x3/4")
- Supports 2V to 5.5V targets

CodeWarrior IDE from Metrowerks:-
- Full debugger, assembler, linker and programming
- Evaluation C compiler

USB HCS08/HCS12 & MON08 Multilink

The **USB HCS08/HCS12 Multilink** Interface provides access to the Background Debug Mode (BDM) on the HCS08, HC12 and HCS12 microcontrollers. It is the hardware interface between a USB port on a Windows 2000 or XP machine and the standard 6 pin "Berg" debug connector on the target. By using the USB HCS08/HCS12 MULTILINK, the user can take advantage of the background debug mode to halt normal processor execution and use a PC to control the processor. The user can then directly control the target's execution, read/write registers and memory values, debug code on the processor, and program internal or external FLASH memory devices.
The **MON08 Multilink** is a cost-effective development toolfor all HC08 MCUs, and provides in-circuit debugging and programming through the standard MON08 serial debug/breakpoint interface.

General Purpose 16-Bit HCS12 Microcontroller

The HCS12 family is built around a powerful 25MHz processor, offers advanced on-chip debugging capability through the unique Freescale Semiconductor Background Debug Mode (BDM), and code compatibility with Freescale's 68HC11 and 68HC12 architectures.

The HCS12 family roadmap features pin-compatible devices with on-chip Flash memory ranging from 32K bytes up to 512K bytes. Each HCS12 derivatives offers varying peripherals and feature sets making the microcontrollers suitable for many different applications.

The general purpose 'A' Family comes with either 128k or 256k Flash, while the automotive and industrial application targeted 'D' Family offers options with 2 to 5 CAN modules.

The flagship, HC9S12A256 features 256K bytes Flash memory, 16-channel, 10-bit ADC, 8-channel 16-bit timer and 4-channel 16-bit PWM Module. Package options include a 112-pin low-profile quad flat (LQFP) and an 80-pin quad flat package (QFP).

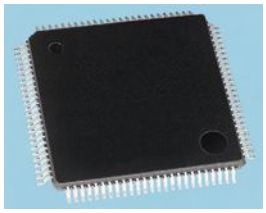
68HC16Z1 - 16 Bit Microcontrollers



The 68HC16Z1 is a high-speed 16 bit control unit that combines high-performance data manipulation capabilities with powerful peripheral subsystems and is upwardly code compatible with the 68HC11 Family of microcontrollers. This MCU is built up from standard modules that interface through a common intermodule bus (IMB).
The 68HC16Z1 incorporates a true 16 bit central processing unit (CPU), a system integration module (SIM), an 8/10 bit analog-digital converter (ADC), a queued serial module (QSM), a general purpose timer (GPT) and a 1 Kbyte static standby RAM.

MC9S12 Series Microcontrollers

The MC9S12 16-bit Microcontroller Family is built around a powerful CPU that incorporates leading-edge, third-generation 0.25μ FLASH technology. This unique family will provide pin-compatible scalability from 32 Kbytes to 512 Kbytes of integrated FLASH along with a wide variety of integrated peripherals. The highly efficient communication CAN modules featured in some of the MC9S12 family make these ideal for other networked automotive applications.

Features:

- Fully upward compatible with the popular 8-bit 68HC11 for easy migration
- Extremely compact code optimized for C
- High performance with up to 40 nsec minimum instruction cycle time
- Flexible addressing modes including multibyte automatic post-increment or decrement for efficient pointer manipulation and looping control
- On-chip background debug module allows expensive emulators to be replaced by low-cost serial real-time emulation and debug.

HCS12 16-Bit Microcontroller Family

The HCS12 Family is a 16-bit Flash-based General purpose/Industrial/Automotive network control MCU family. Members of this Family deliver the power and flexibility of the 16 Bit core (CPU12) family to a whole new range of general purpose Industrial and Automotive network applications.

HCS12 Core features:

- Upward compatible with M68HC11 instruction set
- Interrupt stacking and programmer's model identical to M68HC11
- Instruction queue
- Enhanced indexed addressing
- Memory map and interface (MMC)
- Interrupt control (INT)
- Background debug mode (BDM)
- Enhanced debug12 module, including breakpoints and change-of-flow trace buffer (DBG)

HCS12 DG128 Stand Alone Student Learning Kit & University S12 Evaluation Board Lab IO Kit

New

The S12 DG128 microcontroller stand-alone student learning kit (S12UB) is targeted at teaching the first course in microcontrollers at the university level. The kit contains all of the materials needed to learn MC9S12DG128 operation, embedded assembly and C programming. The S12UB board provides both debug and user circuitry sections.To support the S12UB Hookup labs a LFEBS12UBLAB device Input/Output kit is available.

Board Features:

- Both Debug and Target circuitry on a single board
- Real-time debugging using Background Debug Mode(BDM)
- Removable solderless breadboard to support hookup labs and circuit prototyping
- Signal breakout headers arranged around breadboard
- Hardwire solder prototype area beneath solderless breadboard
- Ground banana jack access in all four corners
- Screw terminal Power IC access
- On-board 5V fully protected power supply with status LED
- +12V power input through barrel or banana jacks

Prewired Input/Output includes:

- Dip switch inputs
- Push button inputs
- LED and 7-segment display outputs
- MC33879 SmartMOS SPI power IC
- Piezo transducer
- RS-232 interface with DB9 connector
- Two CAN 2.0 A/B interfaces with connector
- LIN interface with LIN IN and LIN OUT connectors
- Two Potentiometer inputs, Misc ATD inputs
- Mechanical encoder interface

- **LFEBS12UBLAB Lab I/O kit includes:**
- Mechanical Encoder
- 12V Lamp
- 12V Relay
- LCD Display
- Switch Matrix Keypad
- small DC Motor

MC9S12NE64 Evaluation Board

The EVB9S12NE64 is an evaluation or development board for the M9S12NE64microcontroller. Development of applications is quick and easy with the included DB9 serial cable, sample software tools, examples, and debug monitor. The prototyping area provides space to apply the CPU I/O to your needs. The BDM port is provided for development tool application and is compatible with HCS12 BDM interface cables and software.

Features:
- Evaluation board with a 64K flash MC9S12NE64 MCU, Ethernet port, IrDA port, LCD display port, keyboard port, 512 KB SRAM, dual DB9 RS232 serial ports, switches, LEDs, and a breadboard area
- The Connector: MC9S12NE64 Game and the source code
- Three third party TCP/IP stacks with accompanying CDs containing documentation from leading developers offering a range of software price points
- Modify demo code or develop new code for the MC9S12NE64 in assembly or C using free CodeWarrior™ Development Suite for HCS12, Special Edition
- Program and debug code using free CodeWarrior Development Studio for HCS12, special Edition through DB9 serial port, RS232 serial cable included, via the MC9S12NE64 serial monitor or optional BDM Multilink

MC9S12NE64 16-Bit Microcontrollers

The MC9S12NE is a low-end connectivity applications MCU family, composed of standard on-chip peripherals, including a 16-bit central processing unit (HCS12 CPU). The inclusion of a PLL circuit allows for adjustable power consumption and performance to suit operational requirements. Additionally, an on-chip bandgap-based voltage regulator (VREG_PHY) generates the internal digital supply voltage of 2.5 V (VDD) from a 3.15V to 3.45V external supply range. The MC9S12NE64 has full 16-bit data paths throughout. The 112-pin package version has a total of 70 I/O port pins and 10 input-only pins available.

Features:
- 16-bit HCS12 core
  - Upward compatible with M68HC11 instruction set
  - Interrupt stacking and programmer's model identical to M68HC11
  - Instruction queue
  - Enhanced indexed addressing
  - Memory map and interface (MMC)
  - Interrupt control (INT)
  - Background debug mode (BDM)
  - Enhanced debug12 module, including breakpoints and change-of-flow trace buffer (DBG)
  - Multiplexed expansion bus interface (MEBI) - available only in 112-pin package version
- Ethernet Media access controller (EMAC)
  - IEEE 802.3 compliant
  - Medium-independent interface (MII)
  - Full-duplex and half-duplex modes
  - Flow control using pause frames
  - Address recognition
- 4-channel/16-bit timer module
- Ethertype filter
- Loopback mode
- Two receive and one transmit Ethernet buffer interfaces
- Ethernet 10/100 Mbps transceiver (EPHY)

MC9S12UF32 16-Bit Microcontrollers

The MC9S12UF32 microcontroller unit (MCU) is a 16-bit device composed of standard on-chip peripherals including. In addition to the in-chip full-speed USB 2.0 interface, the MC9S12UF32 has built-in the following interfaces and host controllers: ATA-5 interface, compact Flash, secure digital / multimedia, smartmedia, and memory stick.
Together with the flexible I/O ports, 8-channel, 16-bit timer, this MCU is suited for applications such as multi-card readers, USB thumb drives, and USB to external hard-disk drives.

Features:
High-performance 16-bit HCS12 CPU core● Upward compatible with M68HC11 instruction set
- Interrupt stacking and programmer's model identical to M68HC11
- Instruction pipe
- Enhanced indexed addressing
- Multiplexed external bus
- Integrated Queue controller (IQUE)
- 8-channel, 16-bit enhanced capture timer
- Full/High speed universal serial bus 2.0 (USB 2.0)
- ATA-5 host controller interface
- Flash memory card interfaces
  - Compact Flash host controller
  - Secure digital/multimedia card host controller
  - Smartmedia host controller
  - Memory stick host controller

Parallel Port Command Converter for DSP

New

The Freescale Parallel Port Command Converter is an interface device that, with the assistance of the Freescale DSP Software Development Tools Debugger, allows you to send and receive information from your host system to your Freescale DSP-based system. The interface is from the parallel port on your host system, through the Target Interface Module, to the DSP via a JTAG connection.

Features:
- Affordable Debug Connection for DSP Systems
- Supports Desktop, Notebook and Laptop PCs
- Works with Freescale Software Development Environments

DSP5685x 16Bit Digitial Signal Controllers

The DSP56857 and DSP56858 are members of the 56800E core-based family of controllers. They combine the processing power of a Digital Signal Processor (DSP) and the functionality of a microcontroller on a single chip. They are well-suited to applications in Internet appliances, portable devices; Internet audio; and point-of-sale systems, such as noise suppression; ID tag readers; sonic/subsonic detectors; security access devices; remote metering; sonic alarms.

DSP5685x Features:
- 120 MIPS at 120MHz
- Six independent channels of DMA
- JTAG/Enhanced On-Chip Emulation (OnCE) for unobtrusive, real-time debugging
- Computer Operating Properly (COP)/Watchdog Timer
- Time-of-Day (TOD)
- nstruction set is highly efficient for C compilers

DSP56F8xx 16-bit Digital Signal Controller

The DSP56F801 and DSP56F802 are member of the 56800 core-based family of Digital Signal Controllers, which combine the processing power of a DSP and the functionality of a microcontroller with a flexible set of peripherals on a single chip. They are well suited to applications such as motion control, home appliances, encoders, tachometers, limit switches, power supply and control, engine management, and industrial control for power, lighting, automation and HVAC.

DSP56F801 Features:
- Advanced Pulse Width Modulation
- Dual Analog to Digital Converters
- Programmable 16-bit timers
- 8MHz Crystal Oscillator and PLL with integrated pre and post scalars
- On-board power conversion and management
- Serial communications interface module (SCI)
- Serial peripheral interface module (SPI)
- JTAG/OnCE Debug Programming Interface

DEMO56F8013-EE Demonstration Board

New

The 56F8013 Demonstration Board is used to demonstrate the abilities of the 56F8013 digital signal controller and to provide a hardware tool allowing the development of applications. It includes a 56F8013 digital signal controller, RS-232 interface, user LEDs, user pushbutton switches and a daughter card connector. The daughter card connector allows signal monitoring and expandability of user features.

Features:
- 56F8013, a 16-bit +3.3V hybrid controller operating at 32MHz
- JTAG port interface connector
- RS-232 interface, for easy connection to a host processor
- Daughter card connector
- On-board power regulation provided from an external +9V DC-supplied power input
- Light Emitting Diode (LED) power indicator
- Six on-board real-time user debugging LEDs
- Manual RESET push-button
- Manual interrupt #1 & #2 push buttons

MC56F8367EVME - Evaluation Kit for Digital Signal Controllers

New

The MC56F8367EVME kit is a low-cost kit that contains everything you need to quickly evaluate the features and capabilities of the MC56F8145-67 and MC56F8345-67 controllers silicon and tools. It also provides an efficient, cost-effective vehicle for hardware and software development. It can be used alone, or in conjunction with Freescale's broad range of modular motion control development hardware. The MC56F8367EVME Kit is targeted for use on PC-compatible systems running Windows® 95, Windows 98, Windows 2000, Windows ME, Windows NT 4.0, and Windows XP

Features:
- MC56F836716-bit digital signal controller
- External fast static RAM (FSRAM) memory
- 8.00MHz crystal oscillator for DSP frequency generation
- Optional external oscillator frequency input connector
- Joint Test Action Group (JTAG) port interface connector to interface to an external command converter
- On-board Parallel port command converter, with a connector for a PC printer port cable
- RS-232 interface for easy connection to a host processor
- Pair of Standard Daughter Card connectors enabling connection of application specific and user generated Daughter Cards
- High Speed 1 Mbps CAN interface

DSP56800E 16-Bit Digital Signal Controller Family

The DSP56800E core architecture provides low-cost, low-power, mid-performance computing,combining DSC power and parallelism with MCU-like programming simplicity. The DSP56800E core is a general-purpose central processing unit, designed for both efficient digital signal processing and a variety of controller operations. The DSP56800E's efficient instruction set and bus structure, extensive parallelism, on-chip program and data memories, and advanced debugging and test features make the core an excellent solution for real-time,embedded DSC and control tasks.

DSP56800E Features:
- DRAM/SRAM external memory interfaces
- Two Serial Communication Interfaces (SCIs)
- Up to two Serial Peripheral Interface (SPIs)
- JTAG/Enhanced On-Chip Emulation (OnCE™) for unobtrusive, real-time debugging
- DSP and MCU functionality in a unified, C-efficient architecture

Evaluation module for MCF5235 Coldfire microcontroller

New

The M5235BCCKITE is a low cost evaluation module in Business Card Controller (BCC) format for the Freescale MCF5235 Coldfire microcontroller. Application development is quick and easy with the included components, utilities and software. The BDM port is compatible with standard Coldfire® BDM / JTAG Low voltage development cables. The installed monitor software allows easy application debugging and development.

Features:
- MCF5235 CPU
- 2M Byte Flash (16 bit, external)
- 16M Bytes SDRAM (32 bit, external)
- 25Mhz reference crystal, up to 100Mhz operation
- MCU Port, 50 pin GPIO port w/ 1 x 1Mb CAN I/O
- ETPU Port, 20 pins, 16 channels w/ +V supply
- BUS Port, 34 pins, 64K Address, 8 bit Data Bus, 3 selects
- BDM / JTAG Port, 26 Pins, development port.
- COM Port (UART0) w/ RS232 DB9-S Ribbon Connector
- 10/100TX Ethernet Port w/ RJ45 Connector, 4 status Indicators, Auto MDI-X crossover
- CAN port w/ 1Mbaud transceiver, on MCU Port
- RESET switch and indicator
- ABORT (IRQ7) switch
- Regulated +3.3V and +1.5V power supply w/ indicator

Kit Includes:
- DB9 Serial Cable
- Cat 5E Ethernet cable
- BDM Development Cable
- Utility / Support CD
- Manuals
- Wall Adapter power supply

M523xEVB Evaluation Board

New

The ColdFire M523xEVB evaluation board is intended to provide a mechanism for easy customer evaluation of the the MCF523x family of ColdFire microprocessors and to facilitate hardware and software development. The EVB can be used by software and hardware developers to test programs, tools, or circuits without having to develop a complete microprocessor system themselves.

Features:
- MCF5235 Microprocessor (150 MHz max core frequency)
- 32M byte SDRAM, 2M byte external Page Mode Flash
- BDM Debug Development connector
- 10/100 Ethernet PHY and RJ45 connector
- Two CAN transceivers and DB-9 connectors
- Two serial ports and DB-9 connectors
- All internal module signal connectors available via four, 60-pin expansion connectors
- Breakout connector for serial interfaces (eTPU, I2C, QSPI, GPIO)
- ADC Interface
- Chip configuration capability
- Multiple clocking options
- Debug monitor
- Power Port with Power Supply Access
- Power Requirement: 6 to 14V DC input
- Power output: 5V, 3.3V and 1.5V regulated supplies

M5253EVBE

MCF5253 Evaluation Board

M5253EVBE is a versatile single-board computer based on the MCF5253 ColdFire® processor. It may be used as a powerful microprocessor-based controller in a variety of applications. It serves as a complete microcomputer system for reference design, development/evaluation, training, and educational use. The user need only connect an RS-232 compatible terminal (or a personal computer with terminal emulation software) and a power supply to have a fully functional system.

Features:
- MCF5253 32-Bit ColdFire® Controller
- Additional Memory
- Serial Interfaces
- Digital and Analog Audio I/O connections

Contents:
- EVB Circuit Board
- USB A-B cable (6')
- GE 6-in-1 Cable
- P&E USB BDM Interface
- Power Adapter with Plugs
- MCF5253 Evaluation Board Quick Start Guide
- Warranty Registration Card
- Technical Information Center Worldwide Contact List
- MCF5253 ColdFire® Reference Manual
- M5253EVB User's Manual
- ColdFire® Programmer's Reference Manual

Cyclone Pro Universal Standalone In-Circuit Debugger/Programmer

New

The Cyclone PRO is a powerful stand-alone in-circuit programmer and debug interface for Freescale's HC08, HCS08, HC(S)12(X), RS08, and ColdFire V1 architectures. The Cyclone is able to control a processor using the processor's debug port, which allows the user to quickly debug code and program it onto the microcontroller. Communication with the PC occurs via Ethernet, USB, or Serial Port. Once the Cyclone is configured, programming operations may be completed in one touch with or without a PC.

Features:
- Supports: all HC08, HCS08, HC12, HC(S)12(X), ColdFire V1 and RS08
- Ethernet, USB, and serial interfaces
- Fast in-circuit Flash programming
- Scripting capability automates programming of test routines, test execution, erase and final SW programming
- Auto-detects baud rate and frequency of target MCU
- Provides optional overdrive clock to target MCU
- Automatically cycles power for security checks (up to 500 mA)
- Supports 1.8 V to 5.5 V

Microcontrollers and Microprocessors - 16/32-Bit FREESCALE - continued

V1 ColdFire® Family of 32-bit Microprocessors

The ColdFire CPU has two primary user modes of operation, run and stop. (The CPU also supports a halt mode that is used strictly for debug operations.) The STOP instruction is used to invoke stop and wait modes for this family of devices.

The ColdFire V1 core is the first 8/32-bit compatible architectures microprocessor. Embedded controllers utilizing the V1 core will share common peripherals and development tools with S08 8-bit architecture, providing pin-for-pin compatibility for easier migration to 32-bit performance.
Designed for 32-bit entry-level applications, the V1 core is a simplified version of the ColdFire V2 core. It features improved handling of byte (8-bit) and word (16-bit) operands, while maintaining the same addressing modes and instruction definitions of the ColdFire architecture. By making multiply accumulate (MAC), enhanced MAC (eMAC) and divide (DIV) functions optional, designers can minimize cost in applications that don't require enhanced processing performance.
The ColdFire V1 core utilizes the S08 single-pin background debug module (BDM) for package pin compatibility. This updated debug interface implements a buffer for BDM-readable trace functionality, while maintaining minimum processor overhead.
The V1 core leverages the 2-stage instruction fetch pipeline and 2-stage operand execution pipeline featured in the ColdFire V2 microarchitecture. With a standardized 8-bit bus to S08 peripherals and tightly-coupled 32-bit local memories (flash and SRAM), the V1 core provides an ideal entry point to 32-bit performance. Upward compatibility to all other ColdFire cores (V2 - V4) ensures designs have a roadmap to higher performance.

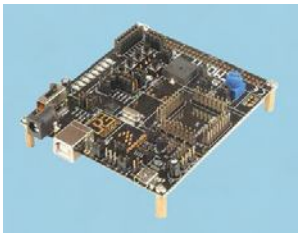
Flexis™ AC Family Demo & Expansion Board

New

The **DEMOACKIT** is a flexible and cost effective demonstration kit for the Flexis AC device family. It contains daughter cards for both the MC9S08AC128CLKE (S08) and the MCF51AC256CLKE (ColdFire V1) processor. It features a ZIF socket, a built-in USB BDM, LEDs, a serial port, an acceleration sensor and an I/O header. Application development on the DEMOAC is quick and easy with the integrated USB-BDM, sample software tools, and examples.
The **DEMOACEX** is a peripheral expansion board designed to interface with the DEMOAC board. It applies the Freescale MC33794 E-Field Imaging Sensor connectedto touch-pad in various arrangements. An 80-pin IO header allows it to connect directly to the DEMOAC board.

DEMOACKIT Features:
- ON/OFF Power Switch
- Power Input Select Option Header
- On-board 5V regulator
- Optional Power Sourced to Connector J1
- 4MHz XTAL Oscillator
- 3-axis accelerometer
- LEDs - 4 User, 1 Power, 1 Reset
- Push button switches - 4 user, 1 Reset
- 5K ohm POT
- Jumpers to disconnect User Features
- 80-pin MCU PORT provides access to MCU signals
- 4 20-pos pin-headers support plug-in MCU modules
- IIC Termination Select Header



DEMOACEX Features:
- 80-pin MCU PORT connects to DEMOAC board
- 9ch, E-Field Sensor
- E-Field Touch Pad including Rotary Dial and Push-Buttons
- 2 Low-Pass RC Filters
- 5V - 12V Boost Switcher Power Supply for E-Field Sensor
- LEDs - 10 User, 1 E-Field Lamp
- CAN 2.0 A/B PHY w/ 3-pos header
- Jumpers to disconnect all IO signals
- SOIC and TSSOP pads for external IC's
- Large thru-hole prototyping area w/ +adjacent 5V and GND

DEMOJMSKT Demo and Development System

New

This system permits evaluation of the MC9S08JM60 microcontroller. It consists of a DEMOJM Base Board and a DCJMSKT daughter card which has a 64LQFP socket to accommodate JM family devices. P&E's Embedded Multilink circuitry on the DEMOJM board allows the processor connected to the DEMOJM to be debugged and programmed via USB from a PC. The demo board can be powered using the USB bus.

DEMOJM Base Board Features:
- On-board Logic Analyser
- On-board Virtual Serial Port
- ON/OFF Power Switch w/ LED indicator
- Power Input Selection Jumpers for selecting the input voltage source

User Features:
- USB device mode and host mode support with Mini-AB USB connector
- CAN Module w/Enable
- 3-axis Accelerometer w/Enable
- 8 User LED's w/ Enable
- 4 User Push Buttons w/ Enable
- 1 Piezzo Buzzer w/ Enable
- IIC Pullups w/ Enable
- 10K Ohm POT w/ Enable

Flexis™ JM Family Demo Board

New

The DEMOJM is a cost-effective kit enabling quick microcontroller evaluation. The kit includes a DEMOJM base board, a red MCF51JM128 daughter card, and a green MC9S08JM60 daughter card. The included kit can first be used to demonstrate the features of the MC9S08JM60 devices, starting with an on-chip USB device controller and transceiver, the user can then change to the MCF51JM128 with an on-chip USB host and device dual-role controller.

Features:
- Freescale MMA7260QT 3-axis Accelerometer
- Virtual Serial Port
- USB device mode and host mode support with Mini-AB USB connector
- CAN transceiver
- 8 User LED's
- 1 Piezzo Buzzer
- I^2C Pullups
- ADC with 10K Ohm POT
- 5 Push Buttons

Evaluation System for MCF51JM128 Flexis™ USB Family

New

The EVB51JM128 is a low-cost development system for the Freescale MCF51JM128 ColdFire® microcontroller. The USB On-The-Go (OTG) feature is supported in hardware through a dedicated USB mini-AB connector and in software through the included complimentary USB-LITE stack by CMX. CodeWarrior Development Tools provide support for quick and easy application development and debug.

Features:
- MCF51JM128 MCU, 80 pins
- 128K Byte Flash, 16K Byte Ram
- USB Phy w/ OTG Support
- Cryptographic Acceleration Unit
- BDM / JTAG Port
- USB On-The-Go Support with Mini AB connector
- USB FS/LS Support with Type-B connector
- ON/OFF Power Switch with LED voltage indicators

User Features:
- 3-Axis MMA7260 Accelerometer
- IR Diode
- 5k ohm POT
- Light Sensor
- Externally Modulated Buzzer
- 8 User LED's
- 4 User Push Switches

M5213EVB Evaluation Board

Demonstrating easy to get, easy to use ColdFire development support, the M5213EVB is a low cost development system for the Freescale MCF521x ColdFire microcontroller family. Application development is quick and easy with the included DB9 serial cable and dBUG firmware monitor. The BDM port is compatible with standard ColdFire BDM / JTAG interface cables and hosting software, allowing easy application debugging and development with a variety of hardware and software tools.

Features:
- MCF5213 CPU
- 256K Byte Flash (on-chip), 32K Byte SRAM (on-chip)
- Up to 80MHz operation
- 8MHz reference crystal
- External clock options
- MCU port
- 60 pin I/O port
- BDM / JTAG Port
- 26-pin development port
- UART0 / Terminal Port w/ RS232 DB9-S Connector
- UART1 Port w/ RS232 DB9-S Connector
- UART2 / CAN port w/ RS232 and 1Mbaud CAN transceiver
- RESET switch and indicator
- 4 User Indicators (LEDs)
- 2 User Push Switches
- 2.4GHz Zigbee capable RF Transceiver
- Regulated +3.3V power supply w/ indicator
- +25VDC, 9VDC typical power input
- Current Consumption: 100ma typical @ 9VDC input

V2 ColdFire® Family of 32-bit Microprocessors

V2 ColdFire Features
- 32-bit address bus which can directly address up to 4 Gbytes
- 32-bit data bus
- Variable-length RISC
- Optimised instruction set for high-level language constructs
- Sixteen general-purpose 32-bit data- and address- registers Multiply Accumulate (MAC) unit for DSP applications (ColdFire2M only)
- Supervisor/user modes for system protection
- Vector-base register to relocate exception-vector table
- Special core interfacing signals for integrated memories
- Full debug support

M5211DEMO Evaluation Board

The M5211DEMO single board computer is a fully assembled, fully functional development board for the Freescale MCF5211 microcontroller. This development kit comes fully equipped with the powerful MCF5211 microcontroller as well as useful output utilities such as a potentiometer and Analog-to-Digital Converter utility for application demonstration.

Features:
- Temperature range: -40C to +85C
- Memory: 128 Byte FLASH, 16K Byte RAM
- MAC Module and HW Divide
- Low-power optimization
- DMA Controller w/ Timers Interrupt Controller
- 8 Channel 12 Bit A/D
- Edge / Interrupt Port
- 8 PWM timers, 4 GPT Timers
- 5k ohm POT w/ enable jumper
- Option Jumpers
- Power Input Select
- DB9 Serial Connector
- Type B USB connector
- Power Input: +5 - +20VDC, 9VDC typical

KIRIN 32-Bit Microcontrollers

The **MCF520X** family of Kirin microcontrollers answer the call for a flexible memory controller, a combination of external SRAM, Flash memory and a choice of SDRAM memory. The MCF5208 embedded controller integrates the standard ColdFire® communication peripherals and a high performance V2 ColdFire® core.
The **MCF521X** family of Kirin microcontrollers is a low power single-chip solution with up to 521KB of embedded Flash memory. The MCF521X embedded controllers integrate various communication peripherals and a high performance V2 ColdFire® core.
The **MCF5222X** family of Kirin microcontrollers builds upon the MCF521X family by integrating a USB host and On-The-Go (OTG) controller, making it ideal for applications requiring device or host connectivity functionality. The MCF5222X family integrate a high performance V2 ColdFire® core, however the MCF52223 embedded controller adds 16 KB of SRAM and an extra 128 KB of Flash to the standard MCF5222X peripheral set.
The **MCF5223X** family of Kirin microcontrollers are single-chip solutions that provide 32-bit control with an Ethernet interface. The MCF5223X combines a 10/100 Fast Ethernet Controller (FEC) and Ethernet Physical Layer (EPHY) with a high performance V2 ColdFire® core.

MCF5221X Family Evaluation Board

The M52211EVB evaluation board provides an excellent vehicle for embarking on a high-performance embedded design of the MCF5221x Family of ColdFire microprocessors. With USB 2.0 On-The-Go connectivity, breakout connectors for serial interfaces (including UART, I2C, QSPI, GPIO, and ADC), and support for a Zigbee-ready daughter card, this complete package includes all the components for realizing a MCF5221x design quickly and easily.

Features:

- Internal 16-Kbyte SRAM & 128-Kbyte device
- USB 2.0 On-The-Go module
- Abort/IRQ7 logic switch debounced
- PLL Clocking options - Oscillator, Crystal or SMA for external clocking signals
- 3 - UART interface
- Supports Zigbee-ready RF daughter card.
- Breakout connector for serial interfaces (including I2C, QSPI, GPIO, and ADC)
- LEDs for power-up indication, general purpose I/O, and timer output signals
- Potentiometer and light sensor dedicated to the ADC.
- CAN transceiver interface & BDM/JTAG interface
- Super Cap for battery life evaluation

MCF522x 32-Bit Microcontroller

MCF5221x Family features an integrated USB On-The-Go (OTG) and a wide variety of serial interface offerings up to three UARTS, one SPI, two I2C which makes it ideal to develop applications requiring device or host USB plus easy connection to other systems.The MCF5223x family of 68K/ColdFire devices are single-chip solutions that provide 32-bit control with an Ethernet interface. It combines a 10/100 Fast Ethernet Controller (FEC) and Ethernet Physical Layer (EPHY) with the Version 2 ColdFire core for exceptional performance at a reasonable cost. The MCF5223x embedded controller provides the designer with the right set of peripherals and memory size for a compact Ethernet-enabled platform that cuts development time and cost to help your products get to market quicker.

The MCF5223x Family integrates standard 68K/ColdFire peripherals, including three universal asynchronous receiver/transmitters (UARTs) for medium and long distance connections, an inter-integrated circuit (I2C) and queued serial peripheral interface (QSPI) for in-system communications to connected peripherals.

MCF5221x

- V2 ColdFire core delivering 76 (Dhrystone 2.1) MIPS @ 66,80 MHz
- Flash 64KB, 128KB
- SRAM 16KB, 8KB.
- Integrated peripherals: USB OTG, TwoPTI, Up to three UART, Two I2C, Up to three SCI & PWM module

MCP5223x

- V2 ColdFire core delivering 57 (Dhrystone 2.1) MIPS at 60 MHz
- eMAC Module and HW Divide
- 32K bytes SRAM, 256K bytes Flash
- Integrated Peripherals:10/100, Ethernet MAC with PHY, Cryptographic Acceleration Unit with Random Number Generator, CAN 2.0B Controller FlexCAN, 3 UARTs, QSPI, I2C bus interface, 12-bit ADC

Evaluation Kit for MCF5223x Microcontrollers

The M52235EVB evaluation board provides an excellent vehicle for embarking on a high-performance embedded design of the MCF5223x Family of ColdFire microprocessors. With 10/100 BaseT ethernet connectivity, breakout connectors for serial interfaces (including I2C, QSPI, GPIO, and ADC), and support for a Zigbee-ready daughter card, this complete package includes all the components for realizing an MCF5223x design quickly and easily.

Features:
- 256-Kbyte internal flash
- Ethernet port 10/100Mb/s with on-chip PHY
- Abort/IRQ7 logic switch debounced
- PLL Clocking options - Oscillator, Crystal or SMA for external clocking signals
- 3 - UART interfaces auxiliary RS-232 serial port and standard DB9 connections
- Supports Zigbee-ready RF daughter card
- Breakout connector for serial interfaces including I2C, QSPI, GPIO, and ADC
- LEDs for power-up indication, general purpose I/O, and timer output signals
- Power over Ethernet
- Potentiometer and light sensor dedicated to the ADC
- CAN transceiver interface & BDM/JTAG interface

M52277EVB Evaluation Board

The M52277 Evaluation Board (EVB) is based on the V2 ColdeFire Core with EMAC. It is supplied with the MCF52277 populated to allow for the evaluation of all of the functionality of this part. This board was designed as a validation platform for the primary goal of maximum flexibility and power and speed, where possible.

Features:
- On Board Sharp 240 x 320 color touch screen LCD panel
- 60 pin external LCD connector
- Synchronous Serial Interface (SSI) connected to audio CODEC
- USB Support
- MCF52277 on-chip OTG transceiver
- Crystal/Clock
- BDM/JTAG
- Two UARTs
- FlexBus
- Timers
- External Interrupts
- CAN Support
- External CAN transceiver
- University Breakout Connector for serial interfaces

Power:
- Inputs
- 5V Input to the voltage regulator circuitry
- Regulated On-board voltages:
- 3.3 V - I/O Voltage
- 1.8 V - Mobile DDR and Flash Voltage
- 1.5 V - MCF52277 Core Voltage

Memory Subsystems:
- 32M x 16 Mobile DDR
- 8M x 16 NOR Flash
- 16Mbit Serial Boot Flash

ZOOM™ COLDFIRE SDK Development Kit

The Zoom™ ColdFire SDK is a low-cost, high-performance application development kit for evaluating the functionality of the Freescale ColdFire processor and Fire Engine. Application development is performed right on the product-ready Fire Engine and software Board Support Packages (BSPs) included in the kit, which enables customers to seamlessly transfer their application code and hardware into production.

Features:
- Low-cost development kit
- Includes product-ready Fire Engine
- Compact size
- Ready to run Board Support Packages (BSPs)

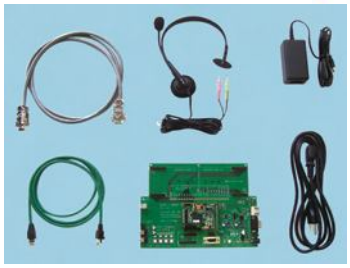
MCF5329 Fire Engine

System on Module



The MCF5329 Fire Engine is a complete System on Module that offers essential features for handheld and embedded networking applications. Use of custom baseboards makes it the ideal foundation for OEMs developing handheld and compact products. It provides a common reference pinout on its expansion connectors, which enables easy scalability to next generation microprocessor Fire Engines when new functionality or performance is required.

Features:
- Product-ready SOM with MCF5329 ColdFire processor @ 240 MHz
- SOM Card Engine form factor
- 60.2 mm x 67.8 mm x 4.4 mm
- Long product lifecycle
- Multiple third-party software options
- 0 to 70°C Temperature Range

M53281KIT VoIP Development Kit

This ColdFire Embedded VoIP Development Kit, is a compact, easy-to integrate development system for enabling commercial VoIP functionality in embedded applications. The module is based on the 240 MHz Freescale ColdFire MCF53281 microprocessor and includes all required system memory and terminations to enable most applications without the need for external circuitry.

Kit Includes:
- Host board
- M53281MOD Module
- Video interface daughter card
- Audio headset
- P&E BDM wiggler
- Power supply
- GNU tools
- VoIP and management software
- All licenses for VoIP and management software use
- Documentation and out-of-the-box
- VoIP demo

USB ColdFire® Multilink

The USB ColdFire® Multilink is an easy-to-use debug and programming interface for the ColdFire V2/V3/V4 line of microprocessors. The USB ColdFire Multilink is a member of P&E's family of USB Multilinks, which allow the PC to communicate with a target processor through the USB port of the PC. The Multillink controls the microprocessor by accessing the Background Debug Mode (BDM) of the target.

Features:
- Fast, hassle-free USB 2.0 communications interface
- Draws power directly from the USB port - no external power supply needed
- Multi-voltage support for targets ranging from 1.8 to 5.5V
- Compact size

M54455EVB Evaluation Board

The M54455EVB platform provides an evaluation system for the Freescale MCF5445x ColdFire® V4m embedded microprocessor family. The MCF54455 is the superset device in the family and is the processor featured on this platform. This allows evaluation and development for the entire family on a single hardware platform.

Features:
- MCF54455 ColdFire microprocessor
- DDR2 SDRAM, 2x NOR flash memory devices, Serial flash, MRAM
- 4x PCI slots, Two-port Ethernet interface, 40-pin ATA connector, Audio interface
- Multiple USB interface options, 2x RS232 serial ports, 1x USB serial port
- Built-in P&E Micro USB Multilink debug interface
- Standard 26-pin BDM header
- Serial interface header for access to timers, interrupts, DSPI, I2C, and more
- Clock generation logic adjustable via I2C
- LEDs and 7-segment display programmable via CPLD and FPGA

M548xEVB Development System
For the ColdFire MCF548x Family

The M548xEVB development system provides everything required to quickly develop an embedded design with the MCF548x processor family. The kit contains a system-on-module, called a Fire Engine, containing 64 MBytes of DDR-SDRAM, 16 MB of Flash, and a graphics contoller. The Fire Engine module, along with the included ethernet ports, PCI slots, CAN interfaces, serial interfaces, and the best-in-class ColdFire debug module generates a complete package to enable quick design support for the MCF5484

ColdFire® Family of 32-bit Microprocessors

The ColdFire Microprocessor Family is the successor to Freescale's Legacy 68K Family tree. The new variable-length RISC 68K Family architecture delivers the aggressive price/performance required by the cost-sensitive embedded market.
The variable-length RISC ColdFire architecture gives greater flexibility to lower memory and system costs. Because instructions can be 16-, 32- or 48 bits long, code is packed tighter in memory resulting in better code density than traditional 32- and 64-bit RISC machines. Efficient use of on-chip memory reduces bus bandwidth and the external memory required.
ColdFire microprocessors are in use in products ranging from industrial automation systems to inkjet printers and MP3 players

ColdFire Architecture
- All cores are 100% fully synthesizable
- Parameterizable - all options exist within a single design description
- Configurable

-Generic local-memory controllers support a range of sizes
-Choose size using compiled memory arrays

- Hierarchical architecture

-Multiple buses provide layers of bandwidth + modularity
-Standard internal bus structure provides simple interface

- Design-for-Test

-Muxed D-FF rising-edge clocked design
-ATPG scan vectors for stuck-at, speed testing
-BIST test methodology for memories

- Deployment focused on soft macro RTL + support of hard macros

V4 ColdFire® Family of 32-bit Microprocessors

The next-generation ColdFire® microarchitecture provides a 2.8x performance improvement when compared with the ColdFire 3 core over a broad range of applications.

V4 ColdFire Features
- Improved microarchitecture for higher performance: greater than 200 Dhrystone 2.1 MIPS @ 150 MHz
- Small set of new instructions for better code density and performance
- Enhanced MAC and debug functionality
- Core size = 4.5 mm2 in 0.25 micron drawn process
- Independent, decoupled pipelines
  -4-stage Instruction Fetch Pipeline (IFP)
  -5-stage Operand Execution Pipeline
  -FIFO I-Buffer is the decoupling mechanism
- Limited superscalar execution through use of instruction folding
  -Approaches dual-issue performance but at a much lower silicon cost
- Harvard memory architecture
- Most instructions execute in 1 cycle
- Sophisticated 2-level branch acceleration mechanisms in the IFP minimize execution time of change

ADS512101 Advanced Development System

New

The ADS512101 is a Mini-ITX embedded advanced development mainboard for the MPC5121e. It can be used as either an evaluation tool, development system or target product. It can be used with all standard Mini-ITX accessories. The product kit includes a 5V wallcube and worldwide adapters, pre-loaded U-Boot, quick start guide and CD with demonstration software, schematics, user manual, and 3rd party information.

Features:
- Standard Mini-ITX Mainboard
- LVDS 24bit (LCD), XGA, HDMI video support
- SATA/PATA (IDE) support
- Micro-SD Card slot
- PCI slot
- 2 Mini-PCI (radio slots)
- 10/100 Ethernet copper
- RS232, CAN (2 each, Dsub & RJ)
- DDR2 RAM
- Power Save Hibernate
- NOR, NAND, and Backup FLASH
- Local Bus IO connector
- USB A, B, OTG
- JTAG and Control CPL
- Power connectors for 5V external power supply or standard ATX power supply

Lite5200B Evaluation Board

New

The 5200B evaluation board provides developers with a cost-effective method to evaluate the power of our 400 MHz MPC5200B. The MPC5200B processor includes support for DDR memory, a second PCI slot and expanded Flash and SDRAM memory. The board makes Ethernet, USB, PCI, ATA, serial interfaces, CAN and GPIO with complete DDR, SDRAM and Flash memory support available. The I2C, I2S, SPI, J1850, AC97 and secondary port facilities, as well as all other resources of the MPC5200B, are accessible via an on-board connector and user-supplied transceivers. Because nearly all of the MPC5200B's I/O pins are re-programmable, various combinations of I/O may be traded off, depending on the user's specific needs.

MPC5554 Evaluation Board

The MPC5554EVB Evaluation Kit include everything necessary to begin development with the MPC5554 family of microcontrollers. A comprehensive set of hardware and software development tool options are available including a free a flash programmer, initialization tools, and assembly level debug tool.

Features:
- Breadboard area, access to all signals
- Nexus Connectors (MICTOR and 14-pin Berg). Footprint for Robust Connector
- 32-channel eTPU connector
- 1x CAN with PHY (Auto Temp Qualified)
- 1x LIN Transceiver with PHY
- 1x RS-232 Transceiver with PHY
- 8x LEDs
- 4x push buttons - 1 with hardware debounce, 8 SPST switches
- 2x Potentiometers
- 1x Audio Speaker with amplifier
- UNI-3 Motor Interface connector plus sensor connector

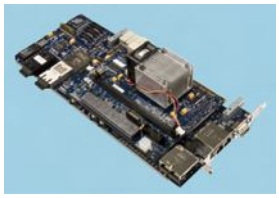
MPC555 32-Bit Microcontroller



The MPC555 is a high speed 32-bit Central Processing Unit that contains a floating point unit designed to accelerate the advanced algorithms necessary to support complex applications. High performance data manipulation capabilities and a large on-chip FLASH memory with powerful peripheral subsystems allow for the flexibility to change or upgrade your product late in the production cycle.

MCP5200 Features:
- 16K Instruction and 16K Data Caches
- 10/100 Ethernet MAC
- Peripheral Control Interface (PCI) Version 2.2
- ATA/IDE Interface
- USB 1.1 Host (two each USB 2.0 compatible)
- Programmable Serial Controllers (six)
- Serial Peripheral Interface (SPI)
- I2C (two)
- I2S (up to three)
- CAN 2.0 A/B (two)
- 8 Timers

Configurable Development Systems

MPC8548CDS

New

The **MPC8548E CDS** supports a wide range of Freescale processors built on Power Architecture technology such as the MPC8548E family of processors including the MPC8548, MPC8547E, MPC8545E and MPC8543E. The system is primarily a development and evaluation system, which is enhanced by its modular design, making it highly configurable.

MPC8555CDS

The **MPC8555 CDS** system is designed to aid hardware and software developers of the PowerQUICC™ III family by providing an evaluation platform for MPC8555E, and MPC8541E derivatives in the 783-pin FC-PBGA package.
The CDS system is preloaded with U-boot and Linux BSP, it has 256MB DDR SDRAM DIMM module, 2 banks of Flash 64Mb each. The on-board interfaces include JTAG/COP, USB, Dual UART, Dual PCI, 10/100/1000 Base-T Fast Ethernets interface, and a 155 Mbps ATM UNI with optical interface.

PowerQUICC™ Communications Processors

Freescale's versatile PowerQUICC delivers functionality tailored to the needs of the embedded communications market space, excelling particularly in broadband access and customer premise equipment applications. Delivering support for protocols including Ethernet, Fast Ethernet, ATM, HDLC, USB and PCMCIA, PowerQUICC processors are well-suited for applications including SOHO routers, remote access routers, DSLAMs, access concentrators, LAN/WAN switches, central office switching, integrated access devices, residential gateways, DSL modems, cable modems, and Voice over IP (VoIP) systems.

MMC2114 32-bit Microcontroller

The MMC2114 single-chip microcontroller is the second member of a family of general purpose microcontrollers based on the M210 core. It cost-effectively integrates digital and analog peripherals with RAM, embedded FLASH memory, and a 32-bit M·CORE microRISC central processor unit on a single-chip. The MMC2114 expands on the features of the popular MMC2107 with twice the FLASH and four times the amount of SRAM.

MPC7447A Host Processor

The MPC7447A processor is a high-performance, low-power, 32-bit implementation of the RISC architecture. Key architectural features include 512 KB of on-chip L2 cache, a 64-bit bus interface and a full 128-bit implementation of Freescale's AltiVec™ technology. MPC7447A processors are ideal for leading-edge computing, embedded network control and signal processing applications.

68K Microprocessor Family

The **MC68000** version provides a static, low power implementation consuming only 15.0mA in normal 3.3V operation and 0.5mA in static standby mode.

The **MC68020** is the first full 32-bit implementation of the M68000 family of microprocessors. Using VLSI technology, the MC68020 is implemented with 32-bit registers and data paths, 32-bit addresses, a rich instruction set, and versatile addressing modes.

The **MC68030** provides a code-compatible upgrade path to the MC68020. It offers enhanced performance through additional cache, a memory management unit, and a bursting data bus.

The **MC68040** are the fourth generation of M68000-compatible, high-performance, 32-bit microprocessors. The devices are virtual memory microprocessors employing multiple concurrent execution units and a highly integrated architecture that provides very high performance. They integrate an MC68030-compatible integer unit (IU) and two independent caches.

The **MC68060** comes fully equipped with both a floating-point unit (FPU) and a memory management unit (MMU) for high-performance embedded control applications

The **MC68306** is an integrated processor containing an MC68EC000 processor and elements common to many MC68000- and MC68EC000-based systems. Systems requiring serial communication and dynamic random access memory (DRAM) can benefit from using this device.

The **MC68332** ia s highly-integrated 32 bit microcontroller that combines high-performance data manipulation capabilities with powerful peripheral subsystems.This MCU is built up from standard modules that interface through a common intermodule bus (IMB).

The **MC68334** is a highly-integrated 32-bit microcontroller, combines high-performance data manipulation capabilities with powerful peripheral subsystems.

The **MC68340** is a high-performance 32-bit integrated processor with direct memory access (DMA), combining an enhanced M68000-compatible processor, 32-bit DMA, and other peripheral subsystems on a single integrated circuit.

MC68882 Floating-Point Co-Processors

freescale semiconductor

New

The MC68882 floating-point coprocessor (FPCP) fully implements the IEEE Standard for Binary Floating-Point Arithmetic (ANSI-IEEE Std 754-1985) for use with the Freescale M68000 Family of microprocessors. The MC68882 provides an increased level of performance in a coprocessor that is fully compatible and physically interchangeable with the MC68881.
Intended primarily for use as a coprocessor to the MC68020/MC68030 32-bit microprocessor, the MC68882 provides a logical extension to the main processing unit integer data processing capabilities. This coprocessor provides a very high performance floating-point arithmetic unit and a set of floating-point data registers utilized in a manner that is analogous to the use of the integer data registers. The MC68882 instruction set, a natural extension of all earlier members of the M68000 Family, supports all of the addressing modes of the host MPU.

Adder852T

MPC8247

ASP8347

These modules provides developers with a cost-effective method for evaluation of the Freescale processor. Peripherals, including the 10/100/100 Ethernet, USB 1 & 2 and serial ports. Supplied with on-board operating system (eCos and Linux options), IP stack and GNU development tools, the module supports rapid product development. The cost-effective module provides an efficient and commercially attractive enhancement to existing product ranges.

- Operating Temperature -40°C to 85°C
- 2 Serial RS232 ports
- Incorporating Freescale processor
- Configurable expansion via connection to the module

Microcontrollers and Microprocessors - 16/32-Bit FUJITSU

SK-16FX-EUROSCOPE

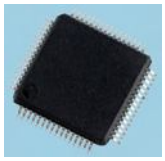
Starter Kit & On-Chip Debug Software Bundle

The SK-16FX-EUROScope includes the SK-16FX-100PMC starter kit and the on chip debug software EUROScope lite 16FX.16FX supports on-chip debugging without the need of boxes and adaptors like common JTAG based systems. The Microcontroller can be connected directly to the Host-PC via a serial RS232 or USB interface (with a converter IC). The on chip debug functionality is completely implemented in a debug support module and the firmware of the MCU.

SK-16FX-100PMC Board Features:

- 1x UART-Transceiver
- 1x USB to serial converter
- 1x High-speed CAN-Transceiver
- 2x LED-Display
- 2x User-button
- 1x Reset-button, Reset-LED
- All 100 pins routed to pin-header
- On-board 5V and 3V voltage regulators, Power-LED
- USB power-supply

EUROScope lite 16FX Features:



- On-chip debugging for 16FX microcontroller
- No kernel linkage/upload required
- Run, stop, abort
- Single step debugging
- Breakpoints
- Memory window
- Watch window
- Mixed source code view
- CPU register window
- Plug-ins available for operating systems

F²MC-16LX Family - MB90Fxxx 16-Bit Microcontrollers

The F²MC-16LX family is a high-performance 16-bit microcomputer having the upward compatibility with the F2MC-16L family.

Features Include:

- Clock multiplier circuit - Reducing the radiation Interference
- High-speed operation
- Power management capabilities
- Low-voltage, low-power voltage dissipation

ADA-91270-90340-100PFV Adapter Board

The ADA-91270-90340-100PFV is an adapter board that can be used together with the evaluation board FLASH-CAN-100P-340 or as a stand-alone system with some limitations. It supports devices of the 16-bit MB90340 Series and 32-bit MB91270 Series with LQFP package PFV/M05. It can be used stand alone for software development and testing of with Flash-devices or as a target board to work with the emulator system.

Features:

- The following series are supported in FPT-100P-M05 Package:
- MB90340 Series: MB90F34x PFV
- MB91270 Series: MB91F272x PFV
- MB96340 Series: MB96F348x PMC
- All resources available for evaluation
- All pins routed to connectors
- 4 MHz main-crystal, 32kHz subclock-crystal (selectable by jumpers)
- Run- / Program-Mode Selector
- One UART interface (optional)

FLASH-CAN-64P-350-PMC Evaluation Board

The FLASH-CAN-64P-350-PMC is a multifunctional evaluation board for the Fujitsu 16-Bit Flash microcontroller 16LX MB90350 and 16FX MB96350 Series. It can be used stand alone for software development and testing or as a simple target board to work with the emulator system. The board allows designers to immediately start with software development before a final target system is available.

Features:

- MB96350 Series: MB96F35x
- 9-12V unregulated external DC power supply usable
- Selectable 5V or 3.3V internal power supply, Power-LED
- In-Circuit serial Flash programming
- All resources available for evaluation
- All 64 pins routed to connectors
- 4 MHz main-crystal, 32kHz sub-clock-crystal (w/ jumpers)
- Two UART Interfaces
- Two LIN-Transceivers
- One High-Speed CAN Transceiver
- 8 User LEDs, optional: alphanumeric standard LC-Display connectable instead of LEDs
- Reset-Button, Reset-LED
- 5 User-buttons configurable for INT10, INT11, TIN1, IN0 and IN1
- 96 pin VG connector

FLASH-CAN-64P-350-PMC	Multifunctional Evaluation Board	**166-0602▲**	359.74

SK-96320-80PMC Evaluation Board

The SK-96320-80PMC is a multifunctional evaluation board for the Fujitsu 16FX Flash microcontroller series MB96F32x. It can be used stand-alone for software development and testing or as a simple target board to work with the emulator system. The board allows the designer immediately to start software development before a final target system is available. A 9V-12V power supply with GND centre pin is required.

Features:

- 5 V, 3.3 V onboard voltage regulators
- Power-LEDs for all supply voltages
- Onboard voltage supervisor monitors both supply voltages
- In-Circuit serial Flash programming
- All resources available for evaluation
- All MCU pins routed to edge connectors
- 4 MHz main crystal
- 32 kHz crystal for sub clock operation
- Two RS232, two LIN and two CAN interface are usable simultaneously
- 3 V capable CAN, LIN and RS232 transceivers
- 8 User LEDs
- optional: alphanumeric standard LC-Display connectable instead of LEDs
- Reset button, Reset LED
- 5 User buttons
- 96-pin VG connector featuring supply voltage (VCC) for external circuits

SK-FR-144PMC-91467B Evaluation Board

The SK-FR-144PMC-91467B is a low-cost evaluation board based on the Fujitsu 32-bit FR Flash microcontroller MB91460 Series. The board allows designers to immediately start with the software development before a final target system is available.

Features:

- 1x UART Transceiver (SUB-D9 connector)
- 1x USB to Serial Converter
- 1x High-speed CAN Transceiver (SUB-D9 connector)
- 2x LED Display (7-Segment)
- 2x User Button
- 1x Reset Button, Reset-LED
- All 144 Pins Routed to Pin-Header
- On-board 5V and 3V Voltage Regulators, Power LED
- USB Power Supply

SK-91470-144PMC1-MC Evaluation Board

The SK-91470-144PMC1-MC is a multifunctional evaluation board for the Fujitsu 32-bit FR Flash microcontroller series MB91470. It can be used stand-alone or together with the MB2198 Emulator system for software development and testing. It can also be used together with an external power stage to evaluate motor control applications. Therefore, connectors featuring the corresponding control and feedback signals are provided to enable quick set-up of the system.

Features:
- 5V on-board voltage regulator
- Power-LEDs for supply voltage
- Onboard voltage supervisor monitors supply voltage
- In-Circuit serial Flash programming via UART
- All resources available for evaluation
- All MCU pins routed to edge connectors
- 34-pin connector for external power stage / inverter
- Connector for Hall sensor and quadrature encoder input
- 10 MHz main crystal
- Three RS232 interfaces are usable simultaneously
- 8 User LEDs, optional: alphanumeric standard LC-Display
- LEDs for PWM output
- Reset button, Reset LED
- 4 user buttons + NMI + DTTI test buttons, 3 user potentiometers

SK-POWER-3P-LV-MC Evaluation Board

The SK-POWER-3P-LV is an evaluation board for low voltage motor control applications, mainly using BLDC (brushless DC) or PMSM (permanent magnet synchronous) motors. The board allows designers to immediately start with software development and evaluation of low voltage three-phase motor control applications before a final target system is available. It is directly connectable to the Fujitsu SK-91470-144PMC1-MC Starter Kit using the included 34-pin ribbon cable.

Features:
- Low-voltage power stage with gate drivers for three-phase motors
- Flexible power supply voltage system:
- DC link input (35V 10A max.) for motor current supply
- Logic supply from DC link or separate input 9-15V
- 10-20V gate driver supply (with optional 15V regulator) and 5V internal logic and analog supply, Power LED
- Integrated current measurement for two phases and DC link current
- Integrated voltage measurement for all three phase voltages and DC link voltage
- Hardware over current/voltage detection with LED, interfaced to DTTI input of Starter kit
- 34-Pin connector holds all relevant PWM and analog signals
- Chopper transistor + connector for external brake resistor

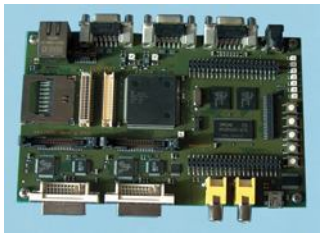
Lime/467 Evaluation Board

With MB91F467D CPU



The Lime/467 Evaluation Board is a compact system, which is populated with the 32-bit CPU MB91F467, graphic display controller MB 86276 also called LIME, Flash memory, SDRAM, SRAM, interfaces as UART, Ethernet, CAN, GPIOs, video inputs and outputs. The board offers various interfaces and has on-board dual video output functionality.

Interfaces:
- CAN RX/TX (Controller Area Network)
- UART (x2)
- Ethernet
- DVI-I (Digital Video Interface - Integrated) (x2)
- Digital RGB output (x2)
- CVBS/S-Video video input (x2)

F²MC-16FX Family - MB96300 Series Microcontrollers

80 pin LQFP

100 pin LQFP

64 pin LQFP

The MB96300 series is based on Fujitsu's advanced 16FX architecture. It also uses the same instruction set as the 16LX series - allowing for easy migration of 16LX Software to the new 16FX products. For highest processing speed at optimized power consumption an internal PLL can be selected to supply the CPU with up to 56MHz operation frequency from an external 4MHz resonator, this results in a minimum instruction cycle time of 17.8ns.

Features:
- 0.18µm CMOS Process Technology
- 8-byte Instruction Execution Queue
- Code Security Feature
- Fast Interrupt Processing
- Optimized Instruction Set for Controller Applications

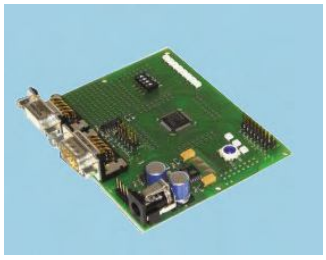
Microcontrollers and Microprocessors - 16/32-Bit INFINEON

XC164CM U CAN Start Kit



The XC164CM U CAN start kit is a fully enabled evaluation platform for the Infineon XC164CM 16-bit microcontroller, packaged in a USB stick. The XC164CM U CAN start kit supports debug of the 16bit MCU via a USB-JTAG solution. The TwinCAN feature of the XC164CM includes 2 CAN transceivers allowing both CAN nodes to be accessed through a 10-pin header, which also allows access to analog and digital I/O signals. The kit comes with a dedicated CAN application program already loaded into the embedded flash memory of the XC164CM MCU, supported with an Application GUI, allowing for easy demonstration of the CAN features.

Kit Includes:
- USB stick with SAF-XC164CM-8F40F 16-bit MCU
- Tasking XC166 Compiler
- HITEX HiTop debugger
- CAN demonstration programs

SK-XC164CS/CM Development Tool

The SK-XC164CM and SK-XC164CS Easy Kits provide a platform to develop, demonstrate, and run software for the XC164CM/XC164CS series of 16-bit microcontrollers. The Evaluation Boards are equipped with peripherals for connection to the environment and an interface for the On Chip Debugging Features (OCDS1). To enable the embedded Flash to be programmed, a tool called MEMTOOL is included.

The SK-XC164CM Easy Kit is based on the SAF-XC164CM-8F40F microcontroller, which features a CPU Clock frequency of 40 MHz, 6 kByte on-chip SRAM and 64 kByte on-chip FLASH.

The SK-XC164CS Easy Kit is based on the SAF-XC164CS-32F40F microcontroller, which features a CPU Clock frequency of 40 MHz, 12 kByte on-chip SRAM and 256 kByte on-chip FLASH.

Board Interfaces:
- SUB-D9 connector for ASC0 Interface via RS 232 port
- 4 pin header for LIN Transceiver (ASC1)
- 16-pin header for JTAG interface (OCDS)
- SUB-D9 connector for CAN High Speed Transceiver (CAN1)
- 10pin (2x5) Header for CAN High Speed Transceiver (CAN2)

Kit Contents:
- USB Wiggler for Debug + USB Cable
- Getting Started, first 3 Steps to setup you Hardware, install the Tools and Debug the first Program
- Evaluation Versions of Development Tools: e.g. Compiler, Debugger, DAvE Mother System v2.1 and Derivative Implementation Files (DIP), Memtool (Flash Programming Tool)
- Technical and Training Documentation

XC166 Family of 16-bit microcontrollers

The XC166 family of 16-bit microcontrollers offers a wide range of products scalable in performance, memory, and peripherals. The XC166 family with its enhanced 16-Bit architecture and its powerful feature set is more than just a 16-Bit Microcontroller. Both, built in safety features and high performance peripherals, are standard for the XC166 family and make these devices the controller of choice for automotive and industrial applications.

XC166 Features:
- High performance 16-bit C166SV2 CPU with 5-Stage Pipeline
- Single cycle instruction execution with 25 ns instruction time at 40 MHz CPU clock
- 25 ns multiplication (16 x 16 bit), background division (32/16 bit), multiply-and-accumulate (MAC) instructions at 40 MHz CPU clock
- On-chip debug support via JTAG interface
- On-chip TwinCAN interface
- Real-Time Clock
- A/D converter
- Serial Ports

C165 16-Bit Single-Chip Microcontrollers

The C165 is a processor designed for high-end real-time requirements and large data throughput where pricing is a sensitive factor, for example in dataprocessing and telecom products. The fastest version of the C165, the SAB-C165-L25M, needs just 80 ns at 25 MHz CPU clock to process each instruction. The C165 can operate at voltages down to 3.0V reducing the power consumption in battery-powered applications.

80C166 Family

- High performance 16-bit MCU
- 16 channel capture/compare/PWM module
- 1K x 8 RAM
- 76 I/O lines
- 10-bit ADC
- 2 serial channels (USART)
- 7 timers
- 8-channel interrupt

The SAB80C166M 16-bit Microcontroller offers ultra high performance with a 100ns instruction cycle and is optimised for use with powerful industry standard high-level language C compilers. A highly flexible 8 and 16-bit programmable bus supports low cost industry standard memory types giving cost effective system designs.

A 100ns task switch combines with a 400ns interrupt latency and on-chip 8 channel peripheral DMA unit allows an almost unlimited number of tasks to run simultaneously, in many cases replacing multiple processors. An enhanced version, the SABC167CRLM, offers on-chip CAN bus support for high performance industrial networks with an external addressing range of up to 16 Mbytes with up top 5 programmable bus areas with chip-select logic.

The SABC165LM offers all of the external memory features of the SABC167CRLM in a low cost package.

TC11666 TriCore™ 32-bit microcontroller

The TC116x series are designed for demanding embedded applications where real-time control, DSP performance and specific peripheral functions are needed. Focus applications are motor drives and industrial control.
The TC116x devices are based on the 32-bit TriCore™ architecture combining RISC, CISC and DSP functionality in a single chip. The rich peripheral set includes a flexible timer unit (GPTA) for PWM generation, fast multi-channel ADCs, optional MultiCAN module, Asynchronous and Synchronous Serial Interfaces (ASC/SSC) and a Micro Link Interface (MLI) for interfacing to a second controller.

TriCore Features:
- High Performance 32-bit TriCort™ V1.3 CPU with 4 -Stage Pipeline
- 80 MHz maximum clock speed
- Floating Point Unit (FPU)
- 1.5 MByte embedded program flash
- 32 KByte data flash for scalable EEPROM emulation
- 56 KByte on-chip SRAM
- 8 channel DMA controller
- 81 digital general purpose I/O lines
- Operating temperature range -40 to 85°C

V850™ Series Microcontrollers

NEC

New

The V850™ microcontrollers incorporate a 32-bit RISC core based on Harvard architecture. Hence, the core hardware can be simplified and the core size minimised. As a result, these microcontrollers provide maximum performance at the lowest cost.
They have extremely low power consumption and low noise while offering high performance and a wide array of functions. They makes it an ideal choice for applications often served by 16-bit microcontrollers.

The V850 microcontrollers are suitable for various application fields including:

- Automotive
- Audio
- Portable devices
- Cameras
- Computer peripherals
- Home appliances
- Industrial equipment
- Video and recording equipment

Microcontrollers and Microprocessors - 32-Bit PARALLAX

Propeller Starter Kit

PARALLAX

The Propeller Starter Kit includes everything that is needed to get started with the Propeller microcontroller. The Propeller Demo Board includes a built-in Propeller (P8X32A-Q44), EEPROM and 5 MHz crystal pre-wired to connectors for interfacing to devices such as a mouse, keyboard, TV or VGA monitor and speakers. This is all configured for immediate use by many objects from the Propeller Object Library.

Kit Includes:

- Propeller Demo Board
- Propeller Manual
- Software on CD
- Power supply
- USB cable

32-Bit Propeller Multicore Microcontrollers

PARALLAX

The Propeller is a multi-processing chip with eight 32-bit processors (cogs) and a shared memory which includes 32KB of RAM and 32KB of ROM with a font, math tables, and Spin interpreter. Cogs can be programmed in either high-level Spin language for simplicity, or assembly language for performance.

Microcontrollers and Microprocessors - 16/32-Bit RENESAS

Microcontroller Starter Kits

RENESAS

New

R0K330290S001BE

Renesas Starter Kits are the latest development from Renesas in low-cost evaluation development toolkits. They offer a user-friendly introductory and evaluation platform for assessing the suitability of a chosen Renesas Microcontroller as well as a basic development platform. The boards also provide a useful platform for evaluating the Renesas suite of development tools for coding and debugging, using High-performance Embedded Workshop as well as programming the device using emulator and/or Flash Development Toolkit.

- CPU Board
- Detachable LCD Display Module
- Detachable AD Adjustment Shaft
- Renesas E-Series Emulator
- Connection Cable (USB Cable, User Interface Cable)
- Quick Start Guide
- CD-ROM
  - Documents
  - IDE: High-performance Embedded Workshop
  - C Compiler: (Differs according to each Starter Kit)
  - Debugger: Renesas E-Series Emulator Debugger
  - Flash Memory Programmer: Flash Development Toolkit Evaluation
- Multi region power supply (only E10A product)
- Voltage Conversion Board for QzROM microcontrollers (only 740 Family product)

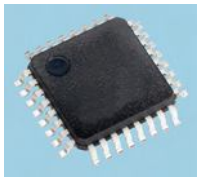
E8 Development Environment System

For H8 Family / H8/300H Tiny Series Microcontrollers



The E8 emulator communicates with the R8C/Tiny MCU (except R8C/10-13) using only one pin (*1), a dedicated pin for debugging purposes only. E8 allows the user to perform complete system debug, from MCU operations to electrical characteristics, in a state close to actual operations of the final product.
The emulator is controlled via the emulator debugger (interface software) on the PC. The Renesas integrated development environment "High-performance Embedded Workshop" provides links between the emulator debugger and a variety of development software tools, such as the C compiler and simulators.

Features include:
- Complete debug functions
- USB bus-powered: no external power supply required
- On-board programming
- Superior operability

R8C/Tiny Series Microcomputer

The R8C/XX Group of Single-Chip 16-BIT CMOS MCU is built using the high-performance silicon gate CMOS process with the R8C/Tiny Series CPU core. This MCU operates using sophisticated instructions featuring a high level of instruction efficiency. With 1M bytes of address space, it is capable of executing instructions at high speed. Applications include electric household appliance, office equipment, housing equipment (sensor, security), general industrial equipment, audio, etc.

Standard on-chip features include:
- 8/16 Bit Multifunction Timers
- UART/Clock Synchronous Serial Interface
- 10-bit A/D Converter
- Input Capture Timer
- Watchdog Timer
- Oscillation Stop Detection Function

M16C / M32C Series Microcomputer

The M16C Family offers a robust platform of 32/16-bit CISC microcomputers featuring high ROM code efficiency, extensive EMI/EMS noise immunity, ultra-low power consumption, high-speed processing in actual applications, and numerous and varied integrated peripherals. Extensive device scalability from low- to high-end, featuring a single architecture as well as compatible pin assignments and peripheral functions, provides support for a vast range of application fields.

The M32C/87 is based on the M32C/80 CPU Core and has 16MB of address space. Maximum operating frequency is 32MHz. Mask ROM and Flash Memory Versions are available. Internal Flash Memory is programmable on a single power source.

SH7080 Series MCUs

RENESAS New

The SH7080 group offers a maximum operating frequency of 80 MHz, representing a 1.6-fold improvement in performance over Renesas Technology's current SH7144 Series. This group incorporates a built-in power supply step-down circuit, and achieves 5V single power supply or 3.3V power supply operation. This group incorporates a maximum of 512 Kbytes of on-chip flash memory capable of constant single-cycle access through the use of cuttingedge flash memory technology. In addition, this group includes varioius peripheral functions such as DMA, a multifunction timer and a high-speed A/D converter in a single chip.

SH7200 Series MCUs

RENESAS New

SH7200 Series is a set of products that feature an SH-2A CPU core. The SH-2A instruction set is fully upwardly-compatible with SH-1 and SH-2, and it also adopts new instructions such as Data Transfer Instruction and Operation Instruction. Superscalar architecture adapted for SH-2A enables the SH7200 Series to execute multiple instructions at the same time, greatly increasing its processing performance compared with the conventional SH-1 and SH-2.

In addition, SH7200 Series are equipped with equivalent modules to SH-1 and SH-2, in order to ensure smooth upgrading to SH-2A. They incorporate FPU, which support single-precision and double-precision floating-point arithmetics, enabling high-speed signal processing.

SH7210 Series MCUs

RENESAS New

The SH7210 Series incorporates an SH-2A CPU core which is fully upwardly-compatible with SH-1 and SH-2. The SH-2A CPU core employs a superscalar architecture enabling simultaneous execution of two instructions. Compared with the conventional SH-1 and SH-2, a tremendous increase in processing performance is realized.
The SH7210 Series supports new instructions including transfer instruction, arithmetic instruction - and bit operation instruction.The SH7210 series incorporates register banks. When an interrupt occurs, CPU internal register information is stored in registers at high speed, making it possible to improve real-time control performance greatly.

SH/Tiny Series MCUs

RENESAS New

The SH/Tiny Series is a microcontroller with on-chip Flash memory which offers a maximum operating frequency of 50 MHz. With a 16-bit multifunctional timer and high-speed A/D converter developed into a single chip mode motor, facilitating system control of motors, etc. with an on-chip debugging function as well as support for full ICE providing diverse debugging functions, the SH/Tiny Series provides an easy-to-use development environment.

HS0005KCU11H On-Chip Debugging Module

RENESAS New

HS0005KCU11H is an on-chip debugging module which utilizes the H-UDI interface of the target device.
With Automatic support for all H8S, H8SX and SH2 microcontrollers with H-UDI interface. The H-UDI can be connected using the 14-pin cable. This module does not support the AUD interface or the SH2, SH3 or SH4 microprocessors.

Components:
- E10A USB supporting H-UDI only - HS0005KCU11H
- 14-way cable for H-UDI connection
- Installation CD incorporating:

- High-performance Embedded Workshop integrated development environment with the E10A-USB debugger component
- Support for H8S, H8SX and SH2 microcontrollers with H-UDI interface. No support for SH3 or SH4 and no need to install Device Group Additions

PC Interface:
- USB interface (USB 1.1, Full speed)

SH/SH2/TINY GROUP

RENESAS

The H8SX/1650 Group is a microcomputer with a high-speed internal 32-bit H8SX CPU as its core, and the peripheral functions required for system configuration. The H8SX CPU is upward compatible with the H8/300, H8/300H, and H8S CPUs.
H8SX family ROMless products support booting of programs to external Flash memory. By using this function, writing programs to onboard external Flash memory can be easily realized.

Application include:
- AV/Home Graphics User
- Network, Industry/Security
- PC-related: PC, Storage System, Printer, Scanner

Microcontrollers and Microprocessors - 16-Bit TEXAS INSTRUMENTS

MSP-FET430 Emulators with USB Programmer

TEXAS INSTRUMENTS

The MSP-FET430 emulators are powerful tools that includes the hardware and software required to complete much of your application development work. The flash memory can be erased and programmed in seconds with only a few keystrokes, and since the MSP430 flash is extremely low power, no external power supply is required. The tool has an integrated software environment and connects directly to the USB port of a PC which greatly simplifies the set-up and use of the tool.

Features:
- FET development board with a ZIF socket fitting MSP430 derivatives, LED indicator, USB to JTAG adapter, cables and header pinouts for prototyping
- Flash devices
- Integrated IAR Kickstart user interface which includes an assembler, linker, simulator, source-level debugger and limited C-compiler
- Full documentation on CD-ROM

492658

		Order Code	Price Each
MSP-FET430U14	14 Pin Pkg Board and USB Programmer	117-2230	135.43
MSP-FET430U64	64 Pin Pkg Board and USB Programmer	117-2231	135.43
MSP-FET430U80	80 Pin Pkg Board and USB Programmer	117-2233	120.64

MSP-FET430 FLASH Emulation Tools

TEXAS INSTRUMENTS

Features:
- MSP430 FET development board with:
  - ZIF socket
  - LED indicator
  - FET to PC cable
  - header pinouts for prototyping
  - On-chip emulation via JTAG
  - Real-time execution/programming
  - Hardware breakpoints/single step
- Two MSP430 supporting FLASH devices
- Integrated IAR Kickstart user interface, including:
  - Unlimited assembler/linker/simulator
  - source-level debugger
  - limited (4kb) C compiler.
- Full documentation on CD ROM.

The FLASH Emulation Tools (FETs) support in-system development for all MSP430 FLASH devices. The MSP-FET430 FLASH Emulators are powerful tools that include the hardware and software required for application development.

Programming, assembler/C-source level debug, single stepping, multiple hardware breakpoints, full-speed operation and peripheral access are fully supported in-system using JTAG.

The IAR Kickstart environment enables designers to update, download, run and debug their code whilst the MSP430 is connected to the PC. This quickens the development cycle of the application. The FLASH memory can be erased and programmed with a few keystrokes.

The MSP430 FLASH is low power and so requires no external power supply. The tools have an integrated software environment and connects directly to the PC, simplifying the set-up and use of the tool. The tools support development with the appropriate FLASH parts in the product families.

MSP-FET430PIF/UIF Debugging Interfaces

The MSP-FET430PIF is a Parallel Port interface and the MSP-FET430UIF is a USB interface pod (neither include target board) that are used to program and debug MSP430 FET tools and test boards through the JTAG interface. These interfaces communicate to the Debugger Software (IAR Kickstart software included) running on the PC. The parallel interface uses the standard 14 pin header to communicate to the MSP430 device using the standard JTAG protocol whereas the USB interface can also use the pin saving Spy-Bi-Wire (2-wire JTAG) protocol.The flash memory can be erased and programmed in seconds with only a few keystrokes, and since the MSP430 flash is extremely low power, no external power supply is required. The tool has an integrated software environment and connects directly to the PC which greatly simplifies the set-up and use of the tool. The flash development tool supports development with all MSP430 flash parts.

Features:
- MSP430 debugging interface to connect a MSP430-Flash-device to a USB port on a PC
- Provided with a USB cable and a 14-conductor target cable
- Integrated IAR Kickstart user interface which includes an assembler, linker, simulator, source-level debugger, and limited C-compiler
- Full documentation on CD ROM
- Backwardly compatable with existing FET tool boards

492663

		Order Code	Price Each
MSP-FET430PIF	Parallel Port Debug Interface	**117-2236**	35.88
MSP-FET430UIF	USB Debugging Interface	**117-2235**	89.99

MSP-FET430 Parallel Port Debug Interface

The MSP-FET430PIF is a Parallel Port interface (target board not included) that is used to program and debug MSP430 FET tools and test boards through the JTAG interface. This interface is included in our FET tools, but sold without the development board. This interface uses a Parallel PC Port to communicate to the Debugger Software (IAR Kickstart software included) running on the PC. The interface uses the standard 14 pin header to communicate to the MSP430 device using the standard JTAG protocol.

Features:
- MSP430 debugging interface
- Supports JTAG debug protocol (NO support for Spy-Bi-Wire (2-wire JTAG) debug protocol)
- Parallel Port cable and a 14-conductor target cable
- Full documentation on CD ROM
- Backwardly compatable with existing FET tool boards

Integrated IAR Kickstart user interface which includes:
- Assembler
- Linker
- Limulator
- Source-level debugger
- Limited C-compiler

Mftrs. List No.	Order Code	Price Each
MSP-FET430PIF	**117-2236**	35.88

MSP430 USB Debugging Interface

The MSP-FET430UIF is a USB interface pod (does not include target board) that is used to program and debug MSP430 FET tools and test boards through the JTAG interface. The USB pod uses a USB PC port to communicate to the Debugger Software running on the PC. It uses the standard 14 pin header to communicate to the MSP430 device either using the standard JTAG or pin saving Spy-Bi-Wire (2-wire JTAG) protocol.

Features:
- MSP430 debugging interface
- Supports both JTAG and Spy-Bi-Wire (2-wire JTAG) debug protocols
- USB cable and a 14-conductor target cable
- Integrated IAR Kickstart user interface

Technical Specifications:
- Software Configurable supply voltage between 1.8 and 5 volts at 100mA
- Can burn JTAG Security Fuse
- Backwardly compatible with existing FET tools and existing JTAG boards

486072

MSP-FET430UIF	**117-2235**	89.99

MSP-FET430 USB Programmers

Features:
- FET development board with a ZIF socket
- Relevent FLASH devices
- Integrated IAR Kickstart user interface

Kits Include:
- Assembler
- CD-ROM
- Compiler
- Development Board
- USB Cable
- USB Connector
- USB Programmer

The MSP-FET430Uxx is a powerful tool that includes the hardware and software required to complete much of your application development work. The flash memory can be erased and programmed in seconds with only a few keystrokes, and since the MSP430 flash is extremely low power, no external power supply is required. The tool has an integrated software environment and connects directly to the USB port of a PC which greatly simplifies use and set-up. It supports development with the MSP430 flash parts in a choice of the following packages: 20 and 28 pin SOWB, 14 pin TSSOP, 64 pin QFP and 80 pin QFN.

MSP-PRG430 Universal Programmer

The MSP-PRGS430 is a universal FLASH, OTP or UV device programmer controlled via a PC serial port. Devices can be programmed in-system using JTAG connection or in stand-alone sockets.

Features:
- RS232 to 14-pin JTAG interface
- Includes .DLL files for production environment
- Supports all devices

MSP-PRGS430	Serial Programming Adapter	**416-3928**	180.87

MSP430 In-System Gang Programmer

This in-system gang programmer tool can be used to program up to 8 MSP430 FLASH devices simultaneously. These devices can be programmed in-circuit or in stand-alone sockets and software is included to facilitate device programming. The programming can be done with a PC or standalone. Since the graphical user interface (GUI) is DLL-based the DLL can be used independently from the GUI. Several examples show how the DLL could be applied at various high level languages (C, C++, VisualBasic, LabView).

Features:
- In circuit gang programmer
- 1 Cable Sub-D 9 Pin and one Cable Sub-D 25 Pin
- Target expansion board
- Eight 14-pin cables for connectivity of up to 8 targets
- Literature including Read Me First and MSP-GANG430 User's Guide
- CD-ROM with MSP-GANG430 Software
- CE-Confirmation Letter

MSP430 Ultra Low Power Microcontrollers

The MSP430 family is a 16-bit RISC based mixed-signal processor, ideal for battery powered measurement applications, enabling systems engineers to interface to analogue signals, sensors and digital components simultaneously.

Features:
- Ultra low power architecture extends battery life
- High performance analogue
- 16-bit RISC CPU enables applications at low code size
- ISP FLASH permits flexible code changes, field upgrades and data logging
- Complete Integrated Development Environment

All devices support:
- Watchdog (16-bit)
- Timer_A (16-bit)
- Comparator_A - analogue signal compare function, slope A/D conversion
- Vcc = 1.8V - 3.6V
- Industrial Temperature

eZ430-F2013 Development Tool in a USB Stick

The eZ430-F2013 is a complete MSP430 development tool including all the hardware and software to evaluate the MSP430F2013 and develop a complete project in a convenient USB stick form. The eZ430-F2013 uses the IAR Embedded Workbench Integrated Development Environment (IDE) to provide full emulation with the option of designing with a stand-alone system or detaching the removable target board to integrate into an existing design. The USB port provides enough power to operate the ultra-low-power MSP430 so no external power supply is required.

Features:
- eZ430-F2013 development tool including a USB debugging interface and detachable MSP430F2013 target board
- LED indicator
- Removable USB stick enclosure
- Debugging interface supports development with all MSP430F20xx devices
- Integrated IAR Kickstart user interface which includes an assembler, linker, simulator, source-level debugger and limited C-compiler
- Full documentation on CD-ROM

Kit Contents:
- CD-ROM including software and documentation
- IAR Embedded Workbench (Kickstart Version) IDE
- eZ430-F2013 Development Tool

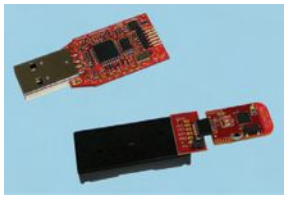
MSP430FG4618/F2013 Experimenter Board

New



This MSP430 Experimenter Board features a MSP430F2013 and a MSP430FG4618 and is compatible with TI's wireless evaluation modules. Two JTAG headers are accessible to program and debug each MSP430 individually and allows for communication to external devices or between the two MSP430s. Power may be supplied over the USB FET or from the included AAA batteries.

Features:
- Microphone
- Buzzer
- LCD
- Capacitive Touch Pad
- 2x Push Buttons
- Prototyping Space
- RS232 Communication Interface
- 2x JTAG Programming Interfaces
- 3.5mm Headphone Jack (audio output)

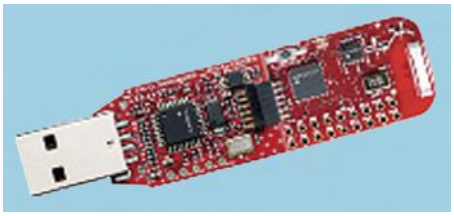
Z-Accel Demonstration Kit

New



Kit Includes:
- 3x CC2480 Target Boards
- 1x eZ430 USB Emulator Board
- 2x AAA eZ430 Battery Boards (batteries included)

The eZ430-RF2480 Demo Kit is a complete USB-based MSP430 wireless demonstration tool providing all the hardware and software to evaluate the CC2480 2.4GHz ZigBee network processor and the MSP430F2274 microcontroller. It has everything needed to understand and fully evaluate the capabilities of CC2480 in a short amount of time with minimal effort.

MSP430 Wireless Development Tool - EZ430-RF2500

The eZ430-RF2500 is a complete wireless development tool for the MSP430 and CC2500 that includes all the hardware and software required to develop an entire wireless project with the MSP430 in a convenient USB stick. The tool includes a USB-powered emulator to program and debug your application in-system and two 2.4-GHz wireless target boards featuring the highly integrated MSP430F2274 ultra-low-power MCU. Projects may be developed and instantly deployed using the included battery expansion board and AAA batteries. All the required software is included such as a complete Integrated Development Environment and SimpliciTI, a propriety low-power star network stack, enabling robust wireless networks out of

RL Re-reeling available

the box. The eZ430-RF2500 uses the MSP430F22x4 which combines 16-MIPS performance with a 200-ksps 10-bit ADC and 2 op-amps and is paired with the CC2500 multi-channel RF transceiver designed for low-power wireless applications.
The eZ430-RF emulator interface may be used with any Spy Bi-Wire enabled MSP430, such as the F22xx and F20xx series, and is fully compatible with the eZ430-F2013 and eZ430-T2012 target boards. The emulator interface can be used to download and debug your target applications, and can transmit serial data to your PC while in or out of a debug session.

Features
- eZ430-RF2500T, wireless target board
- eZ430-RF, debugging interface
- Supports development with all Spy Bi-Wire devices (MSP430F20xx and F22xx)
- Supports MSP430 Application UART allowing serial communication to PC
- Removable USB stick enclosure
- Battery expansion board with 2 AAA batteries
- SimpliciTI, low power network stack
- Example wireless sensor network project measuring temperature, voltage and signal strength
- Integrated development environment which includes an assembler, linker, simulator, source-level debugger and limited C-compiler
- Full documentation on CD-ROM

TPS62260LED-338 Evaluation Module

This evaluation module controls the colour and brightness of a lamp or runs an automatic colour light animation program. The colour is generated by three LEDs (red, green and blue). An MSP430 ultra-low power microcontroller controls the brightness of each LED with constant current generated by three TPS62260 buck converters, one for each LED. The module is pin compatible with the TPS62240 buck converter for lower current LED applications and the TPS62290 for higher current LED applications.

Features:
- 2 V to 6 V Supply Voltage Range
- Output Current up to 600 mA
- 2.25 MHz Fixed Frequency Operation
- Power Save Mode at Light Load Currents
- Typ. 15 µA Quiescent Current
- Soft Start
- Voltage Positioning at Light Loads

Microcontrollers and Microprocessors - ARM-based ANALOG DEVICES

MicroConverter ADuC702X QuickStart™ Development System

The QuickStart Kits for the ADuC7000 Series (ARM7®-core) Precision Analog Microcontrollers feature debug via UART and an Assembly and C-Source debugging environment. The kits allow the user to rapidly evaluate MicroConverter performance and functionality before beginning development.

Hardware Contents:
- ADuC7020/24/28 Evaluation Board
- Serial Download Cable
- International Power Supply

Note: This kit does not include a JTAG emulator

Software Features:
- Keil DKRAM Evaluation version, featuring IDE, C Compiler, Simulator and Debugger (Debugger requires a JTAG emulator)
- IAR Embedded workbench (Evaluation Version, featuring IDE, C Compiler, ARM7TDMI core Simulator & Debugger (debugger is 32K code-size limited for evaluation version) and ROM monitor to debug directly via UART
- PLA Tool
- Example Code, Function Libraries, Datasheets, Application Notes, etc.

ADuC7xxx - Precision Analog ARM7 Microcontrollers

The ADuC7xxx precision analog microcontroller family featuring ARM7-based programmability are designed for high-precision measurement and control, and data acquisition systems with basic digital programming needs. The ADuC7xxx solutions integrate an ARM7TDMI® core that features a flash-based 16-/32-bit RISC MCU with processing capability up to 45 MIPS peak performance. The devices support flexible power-down and wake-up modes and are specified for 3-V operation, working within industrial temperature ranges.

Features:
- 45 MHz 16/32-bit ARM7TDMI microcontroller core
- Multichannel 12-bit 1 MSPS ADC
- Multiple 12-bit 10 µs DACs (10-bit DAC on ADuC712x Series)
- Flash memory for program & data storage
- JTAG emulation
- SPI, I2C, UART
- 3-phase PWM
- 10 ppm voltage reference
- Programmable logic array
- Uncommitted analog comparator

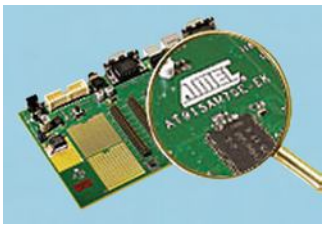
Microcontrollers and Microprocessors - ARM-based ATMEL

AT91SAM7L-STK Starter Kit

New



The AT91SAM7L-STK is a simple starter kit and development system for the ARM® Thumb® based AT91SAM7L series Flash Microcontroller. It is designed to give designers a quick start to evaluate the performance and functionality of the AT91SAM7L series microcontroller and to develop code on it for prototyping and testing of new designs.

Features:
- RS232 Interface to PC for SAM-BA® Programming and Debugging
- 20-pin ICE Interface to SAM-ICE™ for Programming and Debugging
- Battery Socket for 2 AAA Size Batteries 3.0V Power Supply
- ZigBee®Interface for Atmel AT86RF230 Adaptor
- Segment LCD (10 commons by 40 segments) for Display
- 5 Push Buttons for User's Input
- User's Grid and PIO Extension Interface for Prototyping

AT91SAM7SE-EK Evaluation Board

The AT91SAM7SE-EK evaluation board enables the evaluation of and code development for applications running on an AT91SAM7SE device.

Board Features:
- 32 Mbytes of SDRAM memory
- 256 Mbytes of NAND Flash memory
- 1x USB device port interface
- 1x DBGU serial communication port
- 1x Additional serial communication port with RTS/CTS handshake control
- 1x JTAG/ICE debug interface
- 1x Atmel AT73C213 Stereo Audio DAC
- 1x Power LED and 2x General-purpose LEDs
- 1x Joystick and 2x User input push-buttons
- 1x Reset push-button
- 3x expansion connectors (PIO A, PIO B, PIO C)
- 1x EBI expansion BGA-like footprint connector

Kit Contents:
- 1x AT91SAM7SE-EK board
- 1x Universal input AC/DC power supply
- 1x A/B-type USB cable
- 1x Serial RS232 cable
- 1x DVD-ROM containing summary and full datasheets and an AT91 software package

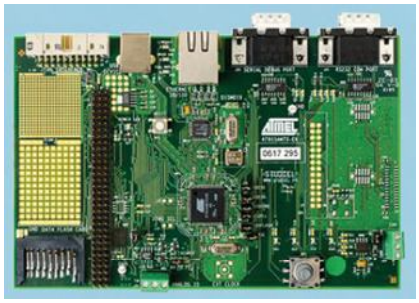
AT91SAM7A3-EK Evaluation Board

The AT91SAM7A3-EK evaluation kit enables evaluation capabilities and code development of applications running on an AT91SAM7A3.



Board Features:
- Equipped with AT91SAM7A3 (100-pin LQFP)
- USB device port interface
- JTAG/ICE debug interface connector
- Expansion connector
- 1x DBGU serial communication port
- 2x Serial CAN communication ports
- 1x Serial LIN communication port
- 1x Buffered analog input and PWM output
- 1x Power LED and 4x general-purpose LEDs
- 1x SD/MMC/DataFlash® card slot
- 1x Atmel® Serial DataFlash
- 1x Footprint for 3.6V lithium thionyl-chloride backup battery

Kit Contents:
- 1x AT91SAM7A3-EK board
- 1x A/B-type USB cable

AT91SAM7X-EK Evaluation Board

The AT91SAM7X-EK evaluation kit is designed to facilitate the development of applications for the AT91SAM7X family of microcontrollers. The kit is shipped with a DVD-ROM containing an AT91 software package with C and assembly listings, to enable the user to begin evaluating the microcontroller quickly.

Board Features:
- AT91SAM7X256 MCU
- USB device port
- DBGU serial communication port
- RS232 serial communication port with RTS/CTS
- JTAG/ICE debug interface connector
- Serial CAN communication ports
- RMII Ethernet 100-base TX with auto MDIX capability
- Buffered analog input and PWM output
- Power LED and general-purpose LEDs
- DataFlash® card slot
- Atmel 32 Mbit serial DataFlash® (AT45DB321C-CNC)

Kit Contents:
- AT91SAM7X-EK development board
- A/B-type USB cable, crossed RS-232 cable and crossed RJ-45 Ethernet cable
- Universal Input AC/DC power supply
- Software DVD-ROM

AT91SAM-ICE JTAG Emulator

The SAM-ICE is a JTAG emulator designed for use with Atmel AT91 ARM cores. It connects via USB to a PC running Microsoft Windows 2000 or XP. SAM-ICE has a built-in 20-pin JTAG connector, which is compatible with the standard 20-pin connector defined by ARM.

Features of SAM-ICE:

- Supports any Atmel AT91 ARM7/ARM9 core
- Seamless integration into the IAR Workbench
- Powered through USB
- Maximum JTAG speed 8 MHz
- Wide target voltage range: 1.2V to 3.3V
- USB and 20-pin ribbon cable included
- Real-time memory viewer (J-Mem) included
- AM-ICE TCP/IP server included, can use SAM-ICE via TCP/IP networks

AT91SAM Smart ARM-based Microcontrollers

The AT91SAM (AT91SAM Smart ARM-based Microcontrollers) family are based on the ARM7TDMI 32-bit RISC microprocessor from ARM. They include embedded Flash and SRAM memories together with a number of peripherals and standard communications and networking interfaces. External interfaces include USB, CAN, Ethernet, SPI, USART and ADC. A DMA controller provides direct communication channels between external interfaces and memories, increasing data throughput with minimal processor intervention.
Features common to all devices:
Clock Speed = 48 or 55MHz, Power Supply = 3.0-3.6V, 8-Channel 10-bit ADC, 1 × TWI, 3 × 16-bit timers, 4 × PWM controllers, 1 × Period interval timer, 1 × Watchdog Timer, 1 × RTT, 1 × PLL, 1 × Power-On Reset, 1 × Brown Out Detection, 1 × On-Chip Oscillator, 4 × High Current Pads, In-System Programming.

Flowcode V3 for ARM and E-Blocks Bundle

New

This solution is perfect for low cost entry into ARM development and is great for engineers who need to develop prototypes of electronic systems quickly using the super fast ARM 7 core from Atmel. The pack is fully compatible with the range of E-block accessories. Datasheets on each individual item are available separately.

Kit Includes:

- Flowcode 3 for ARM
- LED E-Block (8 leds)
- Switch E-block (8 switches)
- LCD E-block (2 line 16 character)
- E-blocks ARM board
- USB cable
- Power supply

Flowcode 3 MCU Development Software

Professional versions

Flowcode 3 is one of the most advanced graphical programming languages for microcontrollers. The great advantage of Flowcode is that it allows those with little experience to create complex electronic and robotic systems. It is a powerful language that uses macros to facilitate the control of complex devices like 7-segment displays, motor controllers, and LCD displays. The use of macros allows students to control highly complex electronic devices without getting bogged down in understanding the programming involved. Flowcode is used in education as a means of introducing students to the concepts of programming.

C for ARM E-blocks bundle EB869SI

This new bundle is designed for those who want to learn how to program embedded ARM microcontrollers in C. The CD ROM contains a full course as well as all the software tools needed to create hex code for the Atmel ARM SAM 7 device - including a full C compiler and an Integrated Development Environment (IDE). The CD ROM makes extensive use of a virtual C microcontroller which uses code simulation to explain how C works: users can step through programs to see the effects of each line of code on the microcontroller. This product is designed to work seamlessly with our E-blocks USB ARM Programmer board which is included in the pack along with and E-block LED, LCD and switch board. Also included is a power supply, and USB lead.

Microcontrollers and Microprocessors - ARM-based ATMEL - continued

E-blocks ARM Programmer EB185

matrix multimedia

This E-blocks board is a development tool for the powerful AT91 SAM 7 microcontroller from Atmel. The SAM 7 is a 32 bit RISC device running at an internal frequency of 80MHz, and having 128k ROM and 32K static RAM as well as 2 USARTs, 4x 10 bit A/D converters and a native USB bus. This incredibly powerful microcontroller can be used for a range of advanced E-blocks projects. The board has 5 E-blocks ports and the processor itself is housed on a removable daughter board (Atmel ARM processors are only available in SMD technology) so that the ARM can be incorporated into custom PCBs. A full course (C for ARM Microcontrollers) is also available which contains a full course and C compiler. Free bootloader software is available. USB cable included.

- 32 bit RISC processor with 128K ROM and 32K SRAM
- USB programmable with boot loader
- 5 x E-blocks ports, 32 I/O lines
- Compatible with most downstream boards
- Native USB and SPI buses

The CD contains a full course as well as all the software tools needed to create hex code for a the Atmel ARM SAM 7 device - including a full C compiler and an Integrated Development Environment (IDE). The CD ROM makes extensive use of a virtual C microcontroller which uses code simulation to explain how C works: students can step through programs to see the effects of each line of code on the microcontroller. This product is designed to work seamlessly with our E-blocks ARM Programmer board, but will also operate with third party programmers. Written by David and Rob Miles of Durham and Hull Universities.

- A full course in C programming
- Includes C compiler and IDE
- Includes virtual ARM microcontroller simulations
- Links to E-blocks ARM multiprogrammer

AT91SAM9RL-EK Evaluation Kit

New

The AT91SAM9RL-EK evaluation kit enables the evaluation of and code development for applicationsrunning on an AT91SAM9RL device. It significantly reduces design cycle time, increasing confidence in a right-first-time system solution.

Features:

- 64Mb DRAM & 256Mb NAND Flash memory
- Atmel serial DataFlash®
- Atmel TWI serial EEPROM (footprint)
- USB High Speed device port interface
- DBGU serial communication port
- Additional serial communication port with RTS/CTS handshake control
- JTAG/ICE debug interface
- AC97 Audio Codec
- 3.5" 1/4 VGA TFT LCD Module with Touch-Screen and backlight
- Power LED and two general-purpose LED
- Two user, Wakeup & Reset push buttons
- MCI SD/MMC card slot
- four expansion connectors
- BGA-like EBI expansion footprint connector
- Lithium Coin Cell Battery Retainer

AT91SAM9XE-EK Evaluation Kit

New

The AT91SAM9XE-EK evaluation kit enables the evaluation of and code development for applications running on an AT91SAM9XE device.The board supports the AT91SAM9XE in an LFBGA217 package as well as in a PQFP208 package.

Board Features:

- 64Mb SDRAM & 256Mb NANDFlash Memory
- Atmel serial DataFlash®
- Atmel TWI serial EEPROM
- USB device port interface
- Two USB Host port interfaces
- DBGU serial communication port
- Complete MODEM serial communication port
- Additional serial communication port with RTS/CTS handshake control
- JTAG/ICE debug interface
- PHY Ethernet 100-base TX with three status LEDs
- Atmel AT73C213 Audio DAC
- Power & general-purpose LEDs
- user, Wakeup & reset push buttons
- DataFlash, SD/MMC card slot
- four expansion connectors
- BGA-like EBI expansion footprint connector
- Lithium Coin Cell Battery Retainer

AT91RM9200-EK Evaluation Board

New

The AT91RM9200-EK Evaluation Board enables real-time code development and evaluation. It supports the AT91RM9200 ARM9™ based 32-bit RISC microcontroller.

Board Features:

- 8 Mbytes of parallel Flash memory
- Four banks of 2M x 32-bit SDRAM
- DataFlash® or SD/MMC memory expansion socket
- Additional DataFlash memory expansion socket
- Digital-to-Analog Converter (DAC) for a stereo audio signal
- Four communication ports (USB host and device, Ethernet, serial and DBGU)
- Graphic controller with output to a standard VGA monitor
- JTAG/ICE, ETM and code test port interface
- Expansion connector
- Onboard prototype area

AT91SAM9260-EK Evaluation Kit

New

The AT91SAM7SE-EK evaluation board enables the evaluation of and code development for applications running on an AT91SAM7SE device.

Board Features:

- 64 Mbytes of SDRAM memory
- 256 Mbytes of NANDFlash memory
- One Atmel serial DataFlash®
- One Atmel TWI serial EEPROM
- One USB device port interface
- Two USB Host port interfaces
- One DBGU serial communication port
- One complete MODEM serial comm. port

Kit Contents:

- AT91SAM9260 Microcontroller
- One AT91SAM9260-EK board
- Universal input AC/DC power supply with US and Europe plug adapter
- One A/B-type USB cable
- One serial RS232 cable

AT91SAM9261-EK Evaluation Kit

The AT91SAM9261-EK Evaluation Kit supports the AT91SAM9261 ARM926EJ-S-based 32-bit RISC microcontroller and enables real-time code development and evaluation.

Board Features:
- 64 Mbytes of SDRAM memory
- 256 Mbytes of NAND Flash memory
- One Atmel® serial DataFlash®
- One USB device port interface
- Two USB host port interfaces
- One DBGU serial communication port
- JTAG/ICE debug interface

Kit Contents:
- AT91SAM9261 microcontroller
- One AT91SAM9261-EK board
- One A/B-type USB cable
- One serial RS232 cable
- One RJ45 crossed Ethernet cable

AT91SAM9263-EK Evaluation Kit

The AT91SAM9263-EK evaluation kit enables the evaluation of and code development for applications running on an AT91SAM9263.

Board Features:
- 64 MB of SDRAM memory
- 4 MB of PSRAM memory on EBI1
- 256 MB of NANDFlash memory
- One NOR Flash memory (footprint only)
- One TWI serial memory
- One USB device port interface
- Two USB Host port interfaces
- One RS232 serial communication port
- One DBGU serial communication port
- One serial CAN 2.0B communication port
- One JTAG/ICE debug interface
- One ISI connector (camera interface)
- One DataFlash®/SD/SDIO/MMC card slot

Kit Contents:
- AT91SAM9263 microcontroller
- One AT91SAM9263-EK board
- One A/B-type USB cable
- One serial RS232 cable
- One RJ45 crossed Ethernet cable

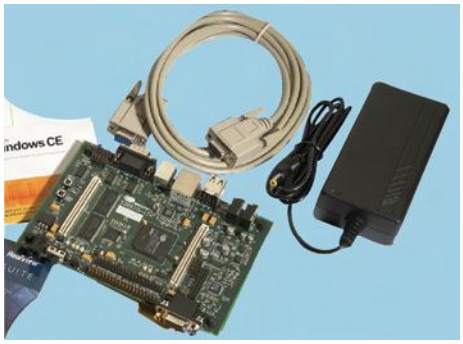
Microcontrollers and Microprocessors - ARM-based CIRRUS LOGIC

Cirrus ARM 9 Processors



A wide variety of embedded processor technologies for consumer and industrial markets. These embedded processors include 24- and 32-bit audio digital signal processors (DSPs) targeted at consumer audio applications, ARM7- and ARM9-based embedded processors focused on industrial applications and CobraNet™ enabled controller and audio system processor ICs for commercial and professional audio markets.

Features include:
- Cost reduction through integration
- Superior user interface capabilities, including 2D graphics accelerator, LCD interface, touch screen and great audio performance.

Embedded Processor Development System for EP9315

The EDB9315A provides design engineers with a complete kit including all the hardware, software and drivers necessary to evaluate the capabilities of the EP9315 ARM9-based embedded processor from Cirrus Logic.

This development system is ideal for high-performance applications that require a powerful user-interface and cost-reduction through a high level of chip integration.

Key features include:
- A complete Linux® Operating system with drives
- BSP for Microsoft® Windows® Win CE 5.0 Operating Systems with drivers included
- Power supply, cables and documentation
- Expansion connectors

Microcontrollers and Microprocessors - ARM-based FREESCALE

M9328MX Development Tools

i.MX Lite Kit

The **i.MX LITEKIT** is a low-cost, high-performance application development kit for evaluating the functionality of the Freescale i.MX processor and System on Module (SOM). Application development is performed right on the product-ready i.MX SOM-LV and software Board Support Packages (BSPs) included in the kit, which enables you to seamlessly transfer your application code and hardware into production.

The **M9328MX21ADS** development tool is designed to run software applications designed for i.MX21 (MC9328MX21) microcontroller unit (MPU).It includes a base board, a CPU board, an LCD display panel, a keypad, a NAND Flash card, an image sensor, a TV encoder card, CF Add-on card, etc. It supports application software, target-board debugging, or optional extra memory.

The i.MX31 Lite Kit provides a product-ready software and hardware platform for evaluating the functionality of the Freescale™ i.MX processor and System on Module. It enables rapid design of embedded products targeting the medical, industrial, wireless, consumer markets and general purpose markets.

Kit Includes:

- Application baseboard
- SOM-LV
- Expansion breakout board
- CD-ROM
- Null-modem serial cable
- Ethernet crossover cable
- USB A to mini-B cable
- 5 volt power supply with power adapters
- End-User License Agreement
- Warranty card
- QuickStart Guide
- Freescale TIC card

Microcontrollers and Microprocessors - ARM-based LUMINARY MICRO

Stellaris® LM3S1968 Evaluation Kits

These evaluation kits enables quick evaluation, prototype development, and creation of application-specific designs using the LM3S1968's broad range of peripherals. The kits also includes extensive source code examples, allowing the user to start building C code applications quickly.A 3 V lithium battery, included in the LM3S1968 Evaluation Kits, supplies power to the Hibernation module and maintains data and real-time clock information for about two years in the absence of USB power.

- The kits are available in 3 versions:
- LM3S1968 Ethernet Evaluation Kit for Keil™ RealView® MDK-ARM (16 KB code-size limited)
- LM3S1968 Ethernet Evaluation Kit for IAR Systems Embedded Workbench® (32 KB code-size limited)
- LM3S1968 Ethernet Evaluation Kit for CodeSourcery G++ GNU (30-day limited)

The kits feature:

- LM3S1968 Evaluation Board
- Stellaris LM3S1968 MCU with 256K flash, 64K SRAM, 8 ADCs, and up to 52 GPIOs
- Support for battery-backed hibernate mode
- OLED graphics display with 128 x 96 pixel resolution
- User LED, navigation switches, and select pushbuttons
- Magnetic speaker
- LM3S1968 I/O available on labeled break-out pads
- Standard ARM® 20-pin JTAG debug connector with input and output modes
- USB and JTAG cables
- CD containing evaluation software tools, documentation, quickstart guide, Stellaris Peripheral Driver Library, and example source code.

Stellaris® LM3S8962 Evaluation Board

New

This Evaluation Kit provides a compact and versatile evaluation platform for Ethernet + CAN enabled Stellaris ARM® Cortex™-M3-based microcontrollers. Each board has an In-Circuit Debug Interface that provides hardware debugging functionality for the on-board Stellaris devices, and any Stellaris microcontroller-based target board.

Kit features:
- LM3S8962 Evaluation Board
- Stellaris LM3S8962 MCU with fully-integrated 10/100 embedded Ethernet controller
- OLED graphics display with 128 x 96 pixel resolution
- User LED, navigation switches, and select pushbuttons
- Magnetic speaker
- LM3S8962 I/O available on labeled break-out pads
- Standard ARM® 20-pin JTAG debug connector with input and output modes
- Standalone CAN device board using Stellaris LM3S2110 microcontroller
- Ethernet cable
- CAN ribbon cable
- USB and JTAG cables

Stellaris® Ethernet-Enabled Intelligent Display Reference Design Kit

New

The Stellaris® Intelligent Display Reference Design Kit offers a complete, open-tool graphical touch-screen user interface design solution for control, automation, and instrumentation applications. It offers a simple method to produce intelligent terminals that can be simultaneously powered and network-connected by a single CAT5 Ethernet cable.

Kit Contents:
- Stellaris Intelligent LCD Module
- 24V power supply with international plug adaptors
- Retractable Ethernet cable
- Debug adapter
- Guide, Manuals,Data Sheet, source code, BOM, schematics & Gerber files on CD

Stellaris® Serial-to-Ethernet Reference Design Kit

New

The RDK-S2E offers a complete, open-tool, and ready-to-implement solution designed to add web connectivity to any serial device. This kit includes the Serial-to-Ethernet Module (MDL-S2E). The most common application for the MDL-S2E is for augmenting legacy products that only contain a serial port for a configuration or control interface. By simply installing the module, it provides many benefits including no major board redesign or software changes, easy sharing on a network other than Ethernet and a tiny form-factor for unobtrusive implementation. A 10-metre maximum cable length for serial connections is no longer a limitation.

MDL-S2E Features:
- LM3S6432 in a 10 x 10 mm BGA package for reduced board size
- 10/100 Mbit Ethernet port
- Auto MDI/MDIX cross-over correction
- Traffic and link indicators Serial ports
- UART ports include RTS/CTS for flow control
- UART0 has RS232 levels, transceiver runs at up to 230.4 Kbaud
- UART1 has CMOS/TTL levels, can run at 1.0 Mbaud

Stellaris® Evaluation Kit including Ethernet or CAN with CodeSourcery

EKC-LM3S2965

EKC-LM3S6965

The Stellaris® LM3S2965 CAN Evaluation Kit is a compact and versatile evaluation platform for the Stellaris LM3S2965 ARM® Cortex™-M3-based microcontroller. The evaluation kit demonstrates a complete controller area network (CAN) using two Stellaris microcontrollers. The main evaluation board (EVB) configures a Stellaris LM3S2965 microcontroller as a CAN host. A small CAN device board, linked with a ribbon cable, uses a Stellaris LM3S2110 microcontroller. The function of each board is fully configurable in software. Kit Contents are LM3S2965 evaluation board (EVB), LM3S2110 CAN device board, USB cable, 20-pin JTAG/SWD target cable & 10-pin CAN cable

The Stellaris® LM3S6965 Ethernet Evaluation Kits are a compact and versatile evaluation platform for the Stellaris LM3S6965 ARM® Cortex™-M3-based microcontroller. The evaluation kit uses the LM3S6965 microcontroller's fully integrated 10/100 Ethernet controller to demonstrate an embedded web server. Kit Contents are LM3S6965 evaluation board (EVB), retracting ethernet cable, USB cable, and 20-pin JTAG/SWD cable.

CD contents for both kits :
- Complete documentation
- Evaluation version of the software tools
- Quickstart guide and source code
- Stellaris Peripheral Driver Library and example source code
- An evaluation version of one of the following:
- Keil™ RealView® Microcontroller
- Development Kit (MDK-ARM)
- IAR Embedded Workbench
- Code Sourcery GCC development tools

Stellaris™ LM3S811 Evaluation Board

KEIL SOFTWARE UK

The Stellaris LM3S811 Evaluation Board is both a compact and versatile evaluation platform for the Stellaris LM3S811 ARM® Cortex-™M3-based microcontroller, and an In-Circuit Debug Interface (ICDI) for any Stellaris microcontroller-based target board. The board allows users to evaluate, prototype, and create application-specific designs.

Board Features:
- Stellaris LM3S811 microcontroller
- OLED graphics display with 96 x 16 pixel resolution
- User-programmable pushbutton and LED
- Reset pushbutton and power indicator LED
- Thumbwheel potentiometer for driving an Analog-to-Digital Converter (ADC) input
- Standard ARM 20-pin JTAG debug connector for use as an In-Circuit Debug Interface (ICDI)
- I/O signal break-out pads for hardware prototyping
- UART0 accessible through a USB Virtual COM Port (VCP)
- USB interface for all communication and power
- Evaluation copy of the Keil™ RealView® Microcontroller Development Kit software tools

EKx-LM3S3748 Evaluation Kits

LUMINARY MICRO

Features include:
- Oscilloscope quick-start application
- Simple set-up - USB cable provides all communication and power
- use as an evaluation platform or as an In-circuit Debug Interface
- C code applications can be built quickly, extensive source code examples are included
- CSTN Graphics display (128x128 resolution with 16-bit colour)
- User LED, navigation switch and pushbutton
- MicroSD card slot
- Speaker
- Hibernate module support (3V lithium coin cell)
- All Dust Devil I/Os available on labelled break-out pads
- Standard ARM 20-pin JTAG connector

Kit Contents:

New

- Evaluation board
- Mini-B USB cable for debug function (3ft)
- Mini-B USB cable for Device Mode use
- 20-Way target cable
- USB Flash Drive
- 7 inch long 'blue wires' for oscilloscope function
- CD containing tools, documentation, guide & example source code

Intelligent Display Module with 3.5" Landscape Display

Stand-Alone Module & Reference Design Kit

LUMINARY MICRO

New

The Stellaris® Intelligent Display Module is offered as a reference design kit as well as a stand-alone, ready-for-production module.
It offers a complete QVGA touch-screen user interface for control, automation, and instrumentation applications. It also features several serial, digital, and analog connectivity options for easy implementation as a Human Machine Interface (HMI) touch display panel in an embedded control device.
Software development for the reference design kit is simplified by using Luminary Micro's comprehensive graphics library and ARM development tools from ARM tools partners.

Brushed DC Motor Control

Stand-Alone Module & Reference Design Kit

LUMINARY MICRO

New

The Stellaris® Brushed DC Motor Control is available as a stand-alone, ready-for-production Module and a Reference Design Kit.
The Brushed DC motor control design offers high performance CAN networking with variable speed control for 12V brushed DC motors at up to 40A continuouscurrent, along with a rich set of control options and sensor interfaces, including analog and quadrature encoder interfaces. The design uses highly optimized software and a powerful 32-bit Stellaris LM3S2616 microcontroller to implement open-loop speed control as well as closed-loop control of speed, position, or motor current.
The high-frequency Stellaris-based PWM enables DC motors to run smoothly and quietly over a wide speed range. The LM3S2616 microcontroller's robust combination of features, along with the efficient and deterministic performance of the ARM Cortex-M3 core, positions the design into a wide variety of consumer and industrial applications.

Brushless DC Motor Reference Design Kit

LUMINARY MICRO

New

The Stellaris Brushless DC Motor Control Reference Design Kit with Ethernet and CAN contains all the necessary hardware and software to design, develop, and integrate BLDC motor applications. It is a sophisticated four-quadrant motor control for three-phase brushless DC motors rated at up to 36 V.

Kit Contents:
- Main control circuit board
- 3-phase brushless DC motor
- 24V wall power supply
- Retractable Ethernet cable
- Debug adapter
- Graphical control program for Windows™ on CD
- Guide, Manuals, Code, BOM, schematics, and Gerber files on CD

Stellaris® Ref Design Kit for AC induction & Stepper Motor

LUMINARY MICRO

RDK-ACIM

RDK-STEPPER

The Luminary Micro Stellaris Stepper Motor Control Reference Design Kit (Stepper RDK) contains all the necessary hardware and software for you to design, develop, and integrate your stepper motor applications. The Stepper RDK combines the strength and flexibility of Luminary Micro's Stellaris microcontrollers with Fairchild Semiconductor's gate drivers and MOSFETs to create an advanced stepper motor control design that has been carefully engineered for performance, cost, and flexibility. Stepper motors are particularly suited for use in two and three-axis CNC equipment, sorting and grading equipment, specialized printers and scanners, and factory automation.
The Luminary Micro Stellaris AC Induction Motor Reference Design Kit (ACIM RDK) contains all the necessary hardware and software for you to design, develop, and integrate your AC induction motor applications. The ACIM RDK combines the strength and flexibility of Luminary Micro's Stellaris microcontrollers with Fairchild Semiconductor's power modules to create an advanced variable speed AC motor control design that has been carefully engineered for performance, cost, and flexibility. AC induction motors are particularly suited for use in major home appliances (refrigerators, dishwashers, washing machines, and dryers), residential and light commercial HVAC systems, and three-phase industrial motor drives.

Kit Contents:
Luminary Micro Stellaris Stepper Motor Control
- Main control circuit board, NEMA23 stepper motor, 24 V wall power supply, USB cable, Graphical control program for Windows™ on CD, Quickstart Guide, User's Manual, Software, Reference Manual, source code, BOM, schematics & Gerber files on CD.

Luminary Micro Stellaris AC Induction Motor
- Main control circuit board with a factory-installed heatsink, 3-phase appliance AC motor (0-20000 rpm), Power cables, USB cable, Graphical control program for Windows on CD, Quickstart Guide, User's Manual, Software, Reference Manual, source code, BOM, schematics & Gerber files on CD.

Microcontrollers and Microprocessors - ARM-based NXP

MCB2100 Evaluation Board

KEIL SOFTWARE UK

The MCB2100 board is a NXP LPC2129 ARM7 processor ideal for single chip development. The board has LED's, a potentiometer and is tracked for standard headers for the IO. With the Keil system, (both the Keil and GNU C/C++ compilers) this is all that is required to do professional ARM development. The Keil MCB2100 evaluation board includes two CAN interface ports and two serial ports. It allows you to experiment with ARM applications and projects that require CAN (Controller Area Network).

- Keil uVision3 IDE and Keil C/C++ compiler and GNU C/C++
- Full Keil ARM Simulator/debugger
- No time limit on Keil tools - size limit 16K
- LPC2129 with on board memory: 16K RAMn 256K FLASH
- Two each of CAN and RS232 interfaces
- Many source code examples supplied
- JTAG and TEM Trace interfaces on board

MCB2103 and MCB2140 evaluation boards For NXP LPC210X and LPC214X Family

KEIL SOFTWARE UK

116-9515

116-9516

The MCB2103 and MCB2140 evaluation boards provide a proven platform to easily evaluate the strengths of the feature-rich, ARM7TDMI™ processor-based LPC210x and LPC214x. These boards integrate a serial port, JTAG port, 8 LEDS, lithium battery for maintaining the real-time clock and a potentiometer to generate analog voltage input.
JTAG interface, coupled with the ULINK USB-JTAG adapter, allows flash programming and real-time in-circuit emulation using the on-chip debug interface of the devices, and fast PC communication via your PC's USB port.The MCB2103 evaluation board ships with a complete evaluation version of the PK-ARM Microcontroller toolchain including µVision IDE, C compiler, assembler, debugger and MCU simulator. Several example software projects to exercise and evaluate the MCU are also included.

Features:

- Serial Port: a standard DB9 connector for access to the LPC device serial port(the MCB2140 has dual serial Port)
- On-board Battery to maintain power to the real-time clock when disconnected from the main power supply.
- Adjustable analog voltage source for testing the Analog to Digital output feature of the LPC device
- JTAG interface, coupled with the ULINK USB-JTAG adapter, allows flash programming and real-time in-circuit emulation
- USB 2.0 Full Speed Interface(MCB2140 only)

LPC2000 Family

NXP founded by Philips

The 16/32-bit LPC2000 family is based on a 1.8V ARM7TDMI-S core operating at up to 60 MHz together with a wide range of peripherals including multiple serial interfaces, 10-bit ADC and external bus options. These controllers are designed for use in a range of applications including industrial control, automotive, medical, connectivity and any other general purpose embedded application requiring high performance and low power consumption.

Features include;

- 16/32-bit ARM7TDMI-S processor
- Watchdog timer
- In-system programming (ISP) and In-application Programming (IAP) via on-chip boot-loader software
- 2 low power modes, Idle and Power-down
- Operating temp. 0°C to 70°C
- Up to 112 5V tolerant general purpose I/O pins
- 60/75 MHz max. CPU clock available from programmable on-chip Phase-locked loop
- On-chip crystal oscillator with an operating range of 1MHz ~ 30MHz
- CPU operating voltage range. 1.65V ~ 1.95V
- I/O power supply range. 3.0V ~ 3.6V

LPC-Stick and Extension Board

hitex DEVELOPMENT TOOLS

NXP founded by Philips

New

The **LPC-Stick** is a small modular evaluation kit. It provides target hardware with the LPC2468 microcontroller from NXP, external SRAM, user pins and LEDs for applications use. Combined with the proven USB debugger device connection and the non-limited HiTOP development tools the LPC-Stick allows full access to all chip features, debugging and programming.

The **LPC-COM Extension Board** provides a set of communication features and pinouts (e.g. Ethernet and Phy, USB Host and Device, UART, SDCard, CAN phy, external power).
With the LPCStickView control software included in the LPC-Stick package the features of the LPC-Stick and the features of the Extension Boards can be controlled. E.g. Web server application, USB device, USB host and CAN functions are ready to use from the demo application. Optional external power can be obtained to build standalone running applications.

LPC2000 Series

NXP founded by Philips

Based on an ARM7TDMI-S core operating at up to 75 MHz, these 32-bit microcontrollers deliver high performance and low power consumption in a cost-effective package. They are designed for use in general purpose and specialty embedded applications such as industrial control, automotive, medical, and connectivity.

32-bit ARM968 LPC291x Series

NXP founded by Philips

Built around a 32-bit ARM968 core operating at up to 80 MHz., these 32-bit microcontrollers are optimised for automotive and industrial applications and fill the performance gap between ARM7TDMI and ARM926EJ technologies.They offers high performance and very low power consumption, and include integrated CAN 2.0B and LIN 2.0 controllers.On-chip memory resources include two tightly coupled memories (TCMs), a 16-KB instruction TCM (ITCM) and a 16-KB data TCM (DTCM). The devices also feature 32-bit external memory controllers.

LPC3180 Low power ARM9-based microcontroller

NXP founded by Philips

The NXP microcontroller LPC3180, a 32-bit microcontroller built around a 90-nm ARM9 core, is the industry's first to provide a vector floating-point co-processor, integrated USB On-The-Go (OTG), and the ability to operate in ultra-low-power mode (down to 0.9 V).
The ARM9 core operates at up to 208 MHz and is supported by 32 K of data cache and 32 K of instruction cache. There is an external-memory interface for NAND Flash and SDRAM memory (at 1.8 V for mobile SDRAM), and a 64-KB block of on-chip SRAM.

Microcontrollers and Microprocessors - ARM-based NXP - continued

LH7A40x ARM9

The LH7A400 and LH7A404 include an LCD controller, for powerful, flexible performance in all sorts of applications, including consumer, entertainment, industrial/commercial, medical, and automotive. The LCD controller is the same in both devices, supporting STN, CSTN, TFT, and AD-TFT displays of 1024 x 768 and 64k colors.

- CPU Processor ARM922T
- Operating Temperature -40 to 85°C
- 7A404 has a 10 x 10-bit ADC with touchscreen interface
- LH7A400N0F076B5 pins/package 256/LFBGA

Microcontrollers and Microprocessors - ARM-based STMICROELECTRONICS

Starter Kit for STM3210B-PRIMER

This is a development and evaluating tool for the STM32 ARM Cortex M3 core-based microcontrollers.

Software Included

- RIDE7 development software toolset with project manager
- GNU C/C++ compiler
- Management application CircleOS task scheduler
- C source code for all sample applications & libraries

Hardware Features of Primer

- The Primer plugs directly into a host PC's USB
- 128x128 pixel color LCD
- MEMs sensor,
- Buzzer
- IrDA transceiver

STM32 (ARM Cortex M3) 32-bit Microcontroller Starter Kits

All of these kits contain everything required to enable users to quickly and easily evaluate the MCU's features, and to start development at very low cost. They include many ready-to-run code examples to demonstrate the device peripherals, with source files that can be adapted for users applications. ST was the first leading MCU supplier to introduce a family based on the Cortex-M3, and this starter kit portfolio offers the widest choice of tools, at the lowest cost, for users intending to develop applications for this core.

The Keil **STM3210B-SK/KEIL** starter kit features the Keil RealView Microcontroller Development Kit software, including the µVision3 integrated development environment for application programming and debugging, and the ARM RealView C/C++ Compilation Tools for up to 16 Kbytes of code, plus a full-featured STM32F103B-based evaluation board, with the ULINK in-circuit (USB/JTAG) debugger/programmer.

The Hitex **STM3210B-SK/HIT** starter kit is based on the HiTOP5 integrated development environment, offering a full range of project management, source-code editing and debugging features through an intuitive graphical interface. The included Tasking VX C/C++ compiler has no code-size limitation when used with the kit hardware. The kit includes a USB stick with STM32F103B and integrated debugging/programming capability, an extension I/O board with peripheral evaluation features, and the DashBoard GUI for MCU performance monitoring.

The IAR **STM3210B-SK/IAR** KickStart kit is based on the IAR Embedded Workbench for ARM (EWARM) development environment, running on an STM32F103B KickStart development board. It includes the IAR C/C++ compiler for up to 32 Kbytes of code, the J-Link in-circuit debugger/programmer (USB/JTAG), a built-in Flash loader, and sample projects for all of the STM32 device peripherals.

The Raisonance REva **STM3210B-SK/RAIS** starter kit, based on the RIDE development environment for code up to 32 Kbytes, offers application debugging and seamless control of the included GNU C/C++ compiler through an intuitive graphical interface. The kit hardware has a modular design based on the USB-powered REva universal evaluation motherboard with embedded RLink in-circuit debugger/programmer (USB/JTAG), and comes with an STM32F103B daughterboard with device-specific evaluation features.

STM3210E-PRIMER

The STM32 Primer is a uniquely fun, easy, low-risk solution for exploring and developing applications for the STM32 ARM Cortex™-M3 core-based microcontrollers.

New

Start exploring the power of the STM32 by playing with the included applications. The STM32 drives the fun, ergonomic hardware platform that combines a TFT graphical display with MEMs-based controls, plus tactile screen and joystick for navigating and controlling the GUI and game applications.

When running the applications, the Primer can operate in standalone mode powered by a battery (with power management circuit), which is recharged via the USB connection with a host PC.

STM32 ARM Cortex M3 32-bit Flash Microcontrollers

The STM32F10xxx incorporates the high-performance ARM Cortex-M3 32-bit RISC core, high-speed embedded memories, and an extensive range of enhanced I/Os and peripherals connected to two APB buses.
These devices offer standard communication interfaces (I2C, SPI, USART), general purpose 16-bit timers and 16-bit ADCs. The STM32F103 performance line also includes USB, CAN and a PWM timer.
With a 2.0 to 3.6 V power supply, the STM32F101 access line family operates in the -40 to +85°C temperature range, and the STM32F103xx performance line family operates in the -40 to +105 °C temperature range. A comprehensive set of power-saving modes allow to design low-power applications.

Applications:
- Motor drive, application control and user interface
- Medical and handheld equipment
- PC peripherals gaming and GPS platforms
- Industrial applications: PLC, inverters, printers, and scanners
- Alarm systems, Video intercom, and HVAC

Microcontrollers and Microprocessors - ARM-based TOSHIBA

TMP910 MCU and Starter Kit

New

this low power ARM-based microprocessor combines a high-performance 32-bit core with comprehensive graphics control and processing functionality and a variety of on-board connectivity and peripheral options. Incorporated is 56 kB of built-in embedded RAM for program, data and display memory, Boot ROM, and a memory controller that supports SDR and DDR SDRAM. Up to 2.5 GB of linear access space can be addressed. An SD host controller supports high-speed mode SD cards with capacities up to 32 GB.

Features:
- STN/TFT color LCD controller
- Supports 800 x 480 (max. 1024 x 1024)
- 16-/24-bit color
- LCD Data Process Accelerator
- Scaling function (expansion/reduction)
- Filter function (bi-cubic convolution)
- Image blending function (font blending)
- CMOS Image Sensor I/F
- Memory Controller
- DMA Controller
- NANDFLASH Controller
- SD Host Controller 50 MHz, 32 GB
- USB Device (High Speed, 480 Mbps)
- 2 ch. of: SPI / UART / I²C / I²S
- RTC, Touch screen I/F
- 6 channel 10-bit A/D converter

The TMPA910CRAXBG microprocessor is supported by this Starter Kit that allows engineers to rapidly and cost effectively develop and prototype applications.Onboard functionality includes a 3.5-inch display with a touch screen, Ethernet connectivity, a 480 Mbps USB 2.0 interface and an RS232 connector. An audio DAC, connected to the processor I²S bus, provides the ability to output excellent sound quality, while board memory comprises 512 MBit SDRAM, 256 Mbit NOR Flash and 2 Gbit NAND Flash. An SD card socket facilitates the use of portable storage.

EZ-KIT Lite™ Evaluation Boards for Blackfin® Processors

The EZ-KIT Lite range of development boards provide design engineers with a complete kit including hardware, software and drivers to evaluate the capabilities of Blackfin Processors. All EZ-KIT Lite deveplopment tools are supplied with an evaluation suite of the VisualDSP++ development environment with the C/C++ compiler, assembler, and linker. The minimum host PC requirements for EZ-KIT Lite boards are Pentium® 166 MHz or higher with 32 MB of RAM, Windows® 98, 2000, or XP and one USB port.

Blackfin® Family Evaluation Kits

ADZS-BF527-EZLITE

ADZS-BF533-EZLITE

ADZS-BF538F-EZLITE

ADZS-BF548-EZLITE

These evaluation kits provide developers with a cost-effective method for initial evaluation of the Blackfin familiy processors. The kits evaluate the processors via a USB-based, PC-hosted tool set and, utilising the full contents of the evaluation kits, users can learn more about the Blackfin familiy's hardware and software development, and quickly prototype a wide range of applications.

ADSP-BF537 EZ-KIT Lite™ Development Kit

This kit provides developers with a cost-effective method for evaluation of the ADSP-BF537 Blackfin® Processor and its rich set of system peripherals, including the IEEE 802.3 10/100 Ethernet MAC and CAN 2.0B controller.
It includes an ADSP-BF537 Processor desktop evaluation board along with an evaluation suite of the VisualDSP++® development and debugging environment with the C/C++ compiler, assembler, and linker. It also includes sample processor application programs, CE-approved power supply, a USB cable, both straight through and cross-over Ethernet cables, a 3.5mm stereo cable, and a pair of stereo headphones.

- ADSP-BF537 Blackfin Processor
- Max Core Clock Rate of 600MHz
- 64 MB (32M x 16) SDRAM, 4 MB (2 M x 16) FLASH memory
- SMSC LAN83C185 10/100 PHY with RJ45 Connector
- CAN TJA1041 Transceiver with 2 RJ10 Connectors
- AD1871 96 KHz stereo DAC with 1/8" Jack Connector
- AD1854 96 KHz stereo ADC with 1/8" Jack Connector
- RS-232 UART line driver/receiver
- National Instruments Educational Laboratory Virtual Instrumentation Suite interface
- Various daughter boards are available to extend the kits functionality - see below

PC System Requirements

- Pentium® 166 MHz or higher, Minimum of 32 megabytes of RAM
- Windows® 2000, Windows XP
- One available USB connector

BF561 EZ-KIT Lite Desktop Evaluation Board

The ADSP-BF561 EZ-KIT Lite allows evaluation of the ADSP-BF561 processor for audio and video applications via a USB-based PC-hosted tool set. Using the advanced video processing peripherals included on the board applications such as simultaneous input and output video processing can be demonstrated, utilising the dual core architecture of the ADSP-BF561 Processor.

Features:

- ADSP-BF561 Blackfin Processor
- 64 MB (16 M x 16-bit x 2) SDRAM and 8 MB (4 M x 16-bit) FLASH memory
- AD1836 multichannel 96 kHz audio codec
- RCA jacks for stereo audio input/output
- ADV7183A advanced 10-bit video decoder
- 3 RCA jacks for composite (CVBS), differential component (YUV) or S video (Y/C) input
- ADV7179 chip scale NTSC/PAL video encoder
- 3 RCA jacks for composite (CVBS), component (RGB), differential component (YUV) or S video (Y/C) Output
- CE approved power supply and USB cable
- Compatible with EZ-Extender daughter boards

Blackfin® EZ-Extender Boards

ANALOG DEVICES

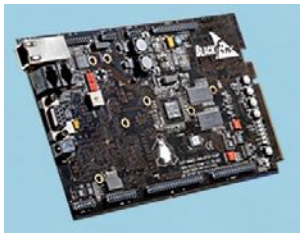
New

ADZS-BF-EZEXT-1

ADZS-BFAUDIO-EZEXT

ADZS-BFFPGA-EZEXT

ADZS-USBLAN-EZEXT



The Blackfin **EZ-Extender** daughter board allows developers to connect the Parallel Peripheral Interface (PPI) on the ADSP-BF533 EZ-KIT Lite and the ADSP-BF561 EZ-KIT Lite to a number of Analog Devices High Speed Converter (HSC) evaluation boards, the OV6630 OmniVision camera evaluation board, and an external LCD display.
The Blackfin **Audio EZ-Extender** and **FPGA EZ-Extender** daughter boards plugs onto the expansion interface of the ADSP-BF533-EZLITE, ADSP-BF537-EZLITE, or ADSP-BF561-EZLITE evaluation systems to aid design and prototyping phases processor targeted applications.
The Blackfin **USB-LAN EZ-Extender** extends the capabilities of the the ADSP-BF533-EZLITE, ADSP-BF537-EZLITE, or ADSP-BF561-EZLITE evaluation systems by providing a connection between the asynchronous memory bus of the Blackfin processor and either a USB 2.0 or a 10/100 Mbps Ethernet device.

ADSP BF537-Stamp Board

ANALOG DEVICES

The BF537 STAMP Board Support Package (BSP) provides developers with a cost effective environment to develop embedded systems with the Blackfin Processor. The STAMP BSP has been specifically designed to support the development and porting of open source uClinux applications and includes the full complement of memory along with serial and network interfaces.

Features:
- Linux OS based on uClinux 2.6.x, GPL license-compliant, complete kernel and driver source code
- GNU gcc (C/C++) support with gdb/kgdb debug capabilities over Ethernet and JTAG
- DAS U-Boot bootloader
- Complete Linux IP stack including standard protocols
- Device drivers for on board peripherals

Blackfin Evaluation & Development Boards

BLUE TECHNIX

EVAL-BF5xx

DEV-BF5xxDA-LITE

The **EVAL-BF5xx** Blackfin Evaluation Board is designed for evaluating all Blackfin Core Modules and provides flexible interfaces user specific extensions. Besides connectors for all Core Module pins the EVAL-BF5xx Evaluation Board contains a SD-Card connector, CAN transceiver, USB and CAN Interface connectors.

EVAL-BF5xx Features:
- Socket for one Blackfin Core Module
- SD-Card socket
- USB (CM-BF537U only)
- CAN (CM-BF537E/U only)
- Ethernet (CM-BF537E only)
- USB-UART Interface
- JTAG Interface Connector
- All core board pins on expansion connector
- Dimensions: 75x75mm, 49 grams

The **DEV-BF5xxDA-Lite** Development Board is designed for evaluating and programming Blackfin based Core Modules. The integrated Debug Agent is a USB based debug interface which enables programming and debugging of the Blackfin Core Modules. The development boards provides all interfaces on dedicated connectors or expansion connectors. Extender boards can be plugged on top of the Development Board in order to enable additional interfaces. All Blackfin Core Modules have compatible connectors and can be replaced with each other.

DEV-BF5xxDA-Lit Features:
- Socket for one Blackfin Core Module
- On-Board Debug Agent (USB JTAG)
- 3.3V and 5V (1.5A) power supply
- Buttons and Leds
- USB-to-UART converter
- Ethernet connector
- USB2.0 connector (U-types only)
- CAN transceiver and connector
- SD-Card Socket
- JTAG Connector

Blackfin Core Modules

BLUE TECHNIX

CM-BF533

CM-BF537E

CM-BF561

TCM-BF537

RL Re-reeling available

The **CM-BF533** is a high performance and low power processor core module incorporating Analog Devices Blackfin family of processors. It is the lowest cost member of the Blackfin family and may be used as a very powerful co-processor or in a standalone application. The module allows easy integration into high demanding very space and power limited applications.

The **CM-BF537E** is the most complete member of the Blackfin processor familiy from Analog Devices and supports an on-board Ethernet function including a 10/100MBit physical transceiver as well as a CAN interface. The module allows easy integration into demanding and very space and power limited applications.

The **CM-BF561** Core Module provides an exceptional high performance at low power consumption with its symmetric dual core processor ADSP-BF561 from Analog Devices. A 32Bit wide SD-RAM bus as well as 2 PPI interfaces will avoid any data bottlenecks. The module allows easy integration into highly demanding very space and power limited applications.

The **TCM-BF537** is an ultra small Core Module designed for industrial temperature range and volume production. It combines Power Supply, RAM and FLASH into a module as small as a chip package. Two 60 pin expansion connectors allow quick prototyping. The module is also available with Border Pads (BP) or a Ball Grid Array (BGA) for low height integrations into the final product.

Blackfin® Embedded Processors

ADSP-BF531/ADSP-BF532/ADSP-BF533

The high performance 16-bit/32-bit Blackfin® embedded processor core, the flexible cache architecture, the enhanced DMA subsystem, and the dynamic power management (DPM) functionality make these devices suitable for a wide range of applications including consumer, communications, automotive, and industrial/instrumentation.

Common Features:

- Parallel Peripheral Interface supporting ITU-R 656 video data formats
- Two dual-channel, full-duplex synchronous serial ports supporting eight stereo I2S channels
- 12 DMA channels supporting one and two-dimensional data transfers
- Memory controller providing glueless connection to multiple banks of external SDRAM, SRAM, Flash, or ROM.
- Multiple timer/counters supporting PWM, pulsewidth, and event count modes
- UART with support for IrDA®
- SPI-compatible port
- Event handler
- Real-time clock
- Watchdog timer
- PLL capable of 1x to 63x frequency multiplication
- Industrial temperature range

Extra Features:

- BF535 - USB, PCI
- BF534 - CAN
- BF537/BF536 - CAN, 10/100 Ethernet MAC

SHARC Series Development Tool Bundle

The SHARC processor fits into a variety of applications from industrial control and instrumentation to audio to military to medical.

This SHARC Development Tool Bundle Includes:

VisualDSP++ Development Software for SHARC processors (VDSP-SHARC-PC-FULL)

- Fully integrated user interface including project management, debugging, profiling, plotting
- Support a variety of debug targets (emulation, simulation, compiled simulation, and 3rd party offerings)
- C/C++ compiler, assembler (with C data type support), expert linker, loader
- VisualDSP++ Kernel (VDK) with multiprocessor messaging capability
- Automation API and Automation Aware Scripting Engine
- Background Telemetry Channel (BTC) support with data streaming capability
- Profile-Guided Optimization (PGO)
- Multiple project management

High Performance USB-Based Emulator (ADZS-HP-USB-ICE)

- High speed USB 2.0 interface enabling download speeds of up to 1.5MB/sec
- Support for all ADI JTAG processors and DSPs
- Background Telemetry Channel support enabling non-intrusive data exchange at up to 2.0 MB/sec
- 1.8V, 2.5V, and 3.3V compliant and tolerant
- 5V tolerant and 3.3V compliant for 5V processors and DSPs
- Multiprocessor support
- 14-pin JTAG connector
- 3-meter USB cable for difficult-to-reach targets
- CE-certified

USB-Based Emulator and High Performance USB-Based Emulator

These Universal Serial Bus (USB)-based emulators provide a non-intrusive target-based debugging solution for Analog Device's processors and DSPs. The emulators include 3-meter cable for to connection to the host PC and employ plug-and-play architectures to allow automatic detection and configuration to be carried out by the host operating system.

Features:

- Full speed USB 1.1 interface or High speed USB 2.0 interface
- Background Telemetry Channel - (ADZS-HPUSB-ICE only)
- 1.8V, 2.5V, and 3.3V compliant and tolerant
- Support for all ADI JTAG processors and DSPs
- 5V tolerant and 3.3V compliant for 5V processors and DSPs
- Multiprocessor support
- 14-pin JTAG connector
- 3-meter USB cable for difficult-to-reach targets
- CE-certified

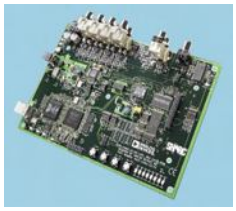
VisualDSP++ Development Software

This software is an easy-to-use integrated development and debugging tool. The software will enable efficient management of digital signal processing (DSP) applications from start to finish using a single interface

Features:



- Fully integrated user interface including project management, debugging, profiling, plotting
- Support a variety of debug targets (emulation, simulation, compiled simulation, and 3rd party offerings)
- C/C++ compiler, assembler (with C data type support), expert linker, loader
- VisualDSP++ Kernel (VDK) with multiprocessor messaging capability
- Automation API and Automation Aware Scripting Engine
- Background Telemetry Channel (BTC) support with data streaming capability
- Profile-Guided Optimization(PGO)
- TCP/IP & USB Support and Processor configuration/Start-up code wizard (Blackfin processors)
- Multiple project management (SHARC and TigerSHARC processors)

EZ-KIT Lite Evaluation Kit

For the ADSP-21262 SHARC® Processor

The ADSP-21262 EZ-KIT Lite™ provides developers with a cost-effective method for initial evaluation of the ADSP-21262 SHARC® DSP architecture via a USB-based, PC-hosted tool set. With this EZ-KIT Lite, users can learn more about Analog Devices ADSP-21262 hardware and software development and quickly prototype a wide range of applications.

The EZ-KIT Lite includes an ADSP-21262 Processor desktop evaluation board along with an evaluation suite of the VisualDSP++ development and debugging environment with the C/C++ compiler, assembler, and linker. VisualDSP++ development and debugging software, along with the USB-based debugger interface, enables users to perform standard debugging functions (such as read and write memory, read and write registers, load and execute executables, set and clear breakpoints, and single-step assembly, C, and C++ source code).

Features:

- ADSP-21262 SHARC® Processor
- 1M x 8-bit Flash memory
- 512K x 8-bit SRAM
- 512 Kbit SPI Flash memory
- AD1835 stereo, 96 kHz, 24-Bit Sigma Delta Codec
- 4x2 RCA jack for 4 channels of stereo audio output
- 1x2 RCA jack for 1 channel of stereo audio input
- Headphone jack (connected to 1 of the stereo outputs)

EZ-KIT Lite Evaluation Kit

For the ADSP-21364 SHARC® Processor

The ADSP-21364 EZ-KIT Lite provides developers with a cost-effective method for initial evaluation of the ADSP-21364 SHARC® Processor architecture via a USB-based, PC-hosted tool set. With this EZ-KIT Lite, users can learn more about Analog Devices' ADSP-21364 hardware and software development and quickly prototype a wide range of applications.

The EZ-KIT Lite includes an ADSP-21364 SHARC Processor desktop evaluation board along with an evaluation suite of the VisualDSP++® development and debugging environment including the C/C++ compiler, assembler, and linker. The evaluation suite of VisualDSP++ is designed to be used with the EZ-KIT Lite only.

Features:

- ADSP-21364 SHARC® Processor
- 1M x 8-bit FLASH memory
- 512K x 8-bit SRAM
- 512 Kbit SPI® FLASH memory
- AD1835 stereo, 96 kHz, 24-bit codec
- USB-based debugger interface

EZ-KIT Lite Evaluation Kit

For the ADSP-21369 SHARC® Processor

The ADSP-21369 EZ-KIT Lite® provides developers with a cost-effective method for initial evaluation of the ADSP-21367, ADSP-21368 and/or ADSP-21369 SHARC® Processor architecture via a USB-based, PC-hosted tool set. With this EZ-KIT Lite, users can learn more about Analog Devices' ADSP-21369 hardware and software development and quickly prototype a wide range of applications.

The EZ-KIT Lite includes an ADSP-21369 SHARC Processor desktop evaluation board along with an evaluation suite of the VisualDSP++® development and debugging environment including the C/C++ compiler, assembler, and linker. The evaluation suite of VisualDSP++ is designed to be used with the EZ-KIT Lite only.

Features:

- ADSP-21369 SHARC Processor
- AD1835 stereo, 96 kHz, 24-bit codec
- 1M x 8-bit FLASH memory
- 1M x 32-bit x 4 banks SDRAM
- 512K x 8-bit SRAM
- 2 Mbit SPI FLASH memory
- ADM3202 RS-232 driver/receiver
- USB-based debugger interface
- Evaluation suite of VisualDSP++ development tools

EZ-KIT Lite Evaluation Kit

For the ADSP-2137x SHARC® Processors

The ADSP-21375 EZ-KIT Lite® provides developers with a cost-effective method for initial evaluation of the ADSP-2137x SHARC® Processors via a USB-based, PC-hosted tool set. With this EZ-KIT Lite, users can learn more about the Analog Devices ADSP-2137x hardware and software development tools, and quickly prototype a wide range of applications.

The EZ-KIT Lite includes an ADSP-21375 SHARC Processor desktop evaluation board along with an evaluation suite of the VisualDSP++® development and debugging environment, including the C/C++ compiler, assembler, and linker. The evaluation suite of VisualDSP++ is designed to be used with the EZ-KIT Lite only.
Additionally, this kit contains the National Instruments Educational Laboratory Virtual Instrumentation Suite (ELVIS) interface. This interface will allow using the DC voltage and current measurement modules, oscilloscope and bode analyzer modules, function generator, arbitrary waveform generator and digital I/O. NI ELVIS is a LabVIEW-based design and prototype environment for university science and engineering laboratories curriculum.

Features:

- ADSP-21375 SHARC® Processor
- 1M x 8-bit FLASH memory
- 8M x 16-bit (167MHz) SDRAM
- 2Mbit SPI® FLASH memory
- AD1835 stereo, 96 kHz, 24-bit codec
- USB-based debugger interface
- Evaluation suite of VisualDSP++ development tools

See the range of **SG-310 Clock Oscillators** from Epson Toyocom on page 263

SHARC DSP Micros

SHARC® Processors are based on a Super Harvard architecture that balances exceptional core and memory performance with outstanding I/O throughput capabilities.

Common Architectural Features

- 32/40-Bit IEEE Floating-Point Math
- 32-Bit Fixed-Point Multipliers with 64-Bit Product & 80-Bit Accumulation
- No Arithmetic Pipeline; All Computations Are Single-Cycle
- Circular Buffer Addressing Supported in Hardware
- 32 Address Pointers Support 32 Circular Buffers
- Six Nested Levels of Zero-Overhead Looping in Hardware
- Rich, Algebraic Assembly Language Syntax
- Instruction Set Supports Conditional Arithmetic, Bit Manipulation, Divide & Square Root, Bit Field Deposit and Extract
- DMA Allows Zero-Overhead Background Transfers at Full Clock Rate Without Processor Intervention

TigerSHARC Processors

Targeted at numerous signal processing applications that rely on multiple processors working together to execute computationally-intensive real-time functions, ADI's TigerSHARC processor is well-suited to video and communication markets, including the 3G cellular and broadband wireless base stations, as well as defense, medical imaging, industrial instrumentation. The ADSP-TS101S features a static superscaler architecture which combines RISC, VLIW and standard DSP functionality. Native support of fixed and floating point data types.

56300 24-Bit Symphony™ Audio DSP Family

The Symphony family of digital signal processors (DSPs) is designed to meet the demands of audio electronics system designers by integrating audio peripherals and by supporting the latest generation decoders, such as Dolby, ®THX® and DTS®. The 56300 Symphony DSP Family and Utilises the single-instruction-per-clock-cycle DSP56300 core, while retaining code compatibility with the DSP56000 core family.

Target Markets:

● **Automotive**
External amplifiers
Radio head units
Rear-seat entertainment

● **Consumer**
A/V receivers
DVD receivers
Ministereo systems
Digital TVs

● **Professional audio**
Professional studio recording equipment
Cinema sound systems
Concert sound systems

OMAP35x Evaluation Module

Featuring the OMAP35x high-performance Superscalar ARM® Cortex™-A8 with NEON co-processing this EVM will allow developers to evaluate and jumpstart development. Equipped with daughter card expansion connections, the OMAP35x EVM can be used to prototype complete systems and is upgradeable to support future OMAP35x processors.
The OMAP35x Evaluation Module includes the following hardware components:

- OMAP35x-based Target Board Processor
- 128 MB LPDDR/128 MB oneNAND Flash or similar capacity and function
- Touch screen LCD display w/ stylus
- Landscape/Portrait modes
- International Power supply with EURO and US power cords
- Serial and USB cables

OMAP5912 Starter Kit

The OMAP5912 Starter Kit for Portable Data Terminals is a low cost, easy to use, convenient way of evaluating the features of the OMAP5912 Processor in next generation PDT devices. The kit includes a development board, and a collection of board and chip specific libraries as well as a suite of development tools for Linux with an OMAP5912 specific Linux kernel. The kit allows users to get started on a portable data terminal-based application and device development.

Hardware Features:

- ARM9 core operating at 192 MHz
- DSP core operating at 192 MHz
- TLV320AIC23 Stereo Codec
- 32 Mbyte DDR SDRAM
- 32 Mbyte Flash ROM
- 4 Expansion connectors (bottom side)
- RS-232 Serial Port
- 10 MBPS Ethernet port
- USB Host Port
- Compact flash connector
- On board IEEE 1149.1 JTAG connector for optional emulation
- +5 Volt operation

F2812 eZdsp™ Starter Kit(DSK)

The F2812 eZdsp™ is a stand alone module that lets evaluators examine certain characteristics of the F2812 digital signal processor (DSP) to determine if this DSP meets their application requirements. This module has a single chip parallel port to JTAG scan controller. Therefore the module can be operated without additional development tools such as an emulator. The module also provides an excellent platform to develop, demonstrate, and run software for the F2812 processor.

Features:

- TMX320F2812 Digital Signal Processor
- 18K words RAM
- 128K words on chip Flash ROM
- 64K words on board RAM
- Expansion connectors
- Onboard embedded IEEE 1149.1 JTAG controller
- 5 Volt only operation with supplied adapter
- Onboard IEEE 1149.q JTAG emulation
- Code Composer Studio v2.12 (eZdsp version).

C5416 DSP Starter Kit (DSK)

The TMS320C5416 DSP starter kit (DSK) is a low-cost development platform designed to speed the development of power-efficient applications based on TI's TMS320C54x DSPs. The kit, which provides new performance-enhancing features such as USB communications and true plug-and-play functionality, gives both experienced and novice designers an easy way to get started immediately with innovative product designs.
The C5416 DSK offers the ability to detect, diagnose and correct DSK communications issues, download and step through code faster and get a higher throughput with Real Time Data Exchange, RTDX™

Features:

- Embedded JTAG support via USB
- High-quality 16-/20-bit stereo codec
- Four 3.5mm audio jacks for microphone, line in, speaker and line out
- 256K words of Flash and 64K words RAM
- Expansion port connector for plug-in modules
- On-board standard JTAG interface
- +5V universal power supply

Contents:

- C5416 DSP Development Board
- C5416 DSK Code Composer Studio™ v2.1 IDE
- Quick Start Guide, Technical Reference and Customer Support Guide
- USB Cable
- Universal Power Supply
- AC Power Cords

TMS320C6713 DSP Starter Kit (DSK)

The TMS320C6713 DSP Starter Kit (DSK) developed jointly with Spectrum Digital is a low-cost development platform designed to speed the development of high precision applications based on TIś TMS320C6000 floating point DSP generation. The kit uses USB communications for true plug-and-play functionality. Designers can get started immediately with innovative product designs with the DSKś full featured Code Composer Studio v2.2 IDE and eXpressDSP Software which includes DSP/BIOS and Reference Frameworks. The C6713 is based on the TMS320C6000 DSP platform designed to meet the needs of high-performing high-precision applications such as pro-audio, medical and diagnostic.

RL Re-reeling available

Features:
- TMS320C6713 DSP, a 225 MHz device delivering up to 1800 million instructions per second
- Embedded JTAG support via USB
- High-quality 24-bit stereo codec
- Four 3.5mm audio jacks for microphone, line in, speaker and line out
- 512K words of Flash and 8 MB SDRAM
- Expansion port connector for plug-in modules
- On-board standard IEEE JTAG interface
- +5V universal power supply
- Code Composer Studio complete Integrated Development Environment (IDE), an efficient optimizing C/C++ compiler assembler, linker, debugger, an a advanced editor.
- DSP/BIOS™real-time kernel
- Target error recovery software
- DSK diagnostic tool

Contents:
- C6713 DSP Development Board with 512K Flash and 8MB SDRAM
- C6713 DSK Code Composer Studio™ v2.2 IDE including the Fast Simulators and access to Analysis Toolkit on Update Advisor
- Quick Start Guide, Technical Reference and Customer Support Guide
- USB Cable and Universal Power Supply
- AC Power Cords
- MATLAB from The Mathworks 30 day free evaluation

TMS320C6416 DSP Starter Kit

The TMS320C6416 DSP Starter Kit (DSK) is a low-cost development platform designed to speed the development of high performance applications based on TI's TMS320C64x DSP generation. Both experienced and novice designers can get started immediately with innovative product designs with the DSK's full featured Code Composer Studio™ IDE and eXpressDSP™ Software which includes DSP/BIOS and Reference Frameworks.

TMS320C6416 DSK board Features:
- Embedded JTAG support via USB
- High-quality 24-bit stereo codec
- Four 3.5mm audio jacks for microphone, line in, speaker and line out
- Expansion port connector for plug-in modules
- On-board standard IEEE JTAG interface

Code Composer Studio Features:
- A complete Integrated Development Environment (IDE), an efficient optimising C/C++ compiler assembler, linker, debugger, data visualisation, a profiler, advanced optimisation tools, and a flexible project manager
- DSP/BIOS™ real-time kernel
- Target error recovery software
- DSK diagnostic tool
- "Plug-in" ability for third-party software for additional functionality

Kit Includes
- C6416 1 GHz DSP Development Board with 512K Flash and 16MB SDRAM
- C6416 DSK Code Composer Studio™ IDE including the Fast Simulators and access to Analysis Toolkit on Update Advisor
- Quick Start Guide
- USB Cable

DM6446 Digital Video Evaluation Module

This Digital Video Evaluation Module allows the user to evaluate TI's new DaVinci™ Technology, and begin building digital video applications such as videophones, automotive infotainment, digital still camera's, streaming media, IP set-top boxes and video security systems. It also allows developers to write production-ready application code for the ARM and provides access to the DSP core using DaVinci APIs to begin immediate application development for the TMS320DM6443 and TMS320DM6446 digital media processors.

Kit Contents:
- TMS320DM446 DaVinci™ processor-based development board
- Video Camera
- LCD Screen, Speakers and Microphone
- IR Remote
- Hard Disk Drive (2.5-inch 40G)

Digital Media System-on-Chip (DMSoC)

TMS320DM355

New

These Digital Media System-on-Chips are highly integrated, programmable platforms for digital still camera, digital photo frames, IP security cameras, 4-channel digital video recorders, and other low cost portable digital video applications.
They offer portable video designers and manufacturers the ability to produce portable digital video solutions with high picture quality, by combining high performance MPEG4 HD codecs, JPEG codecs and low power consumption.

C2000 Code Composer Studio™

New

Code Composer Studio™ (CCStudio) Development Tools are a key element of the eXpressDSP™ Software and Development Tools. CCStudio delivers all of the host tools and runtime software support for your TMS320™ DSP based real-time embedded application.
CCStudio's easy to use development environment allows DSP designers of all experience levels to move quickly through each phase of the application development process including design, code and build, debug, analyze and optimize.

Software Features:
- Real-time analysis capabilities
- Easy to use debugger
- C/C++ Compiler
- Assembler
- Linker
- Editor
- Visual project manager
- Simulators
- XDS560 and XDS510 emulation drivers
- DSP/BIOS support

F2808 eZdsp™ Starter Kit

The F2808 eZdsp™ Starter Kit provides a platform to develop, demonstrate, and run software for the TMS320F2808 digital signal controller. Plug-and-play functionality enables both experienced and novice designers to get started immediately.

Hardware Features:
- TMS320F2808 at 100MHz, socketed
- 18K on-chip zero wait-state SARAM
- 256K bit I2C EEPROM
- 20MHz input clock to TMS320F2808
- On-board embedded JTAG emulation with USB host connection
- Support for external emulator via standard JTAG header
- 2 SCI ports with on-board transceivers. One port pinned out to standard 9 pin DSUB.
- 2 Enhanced CAN ports with on-board transceivers. One port pinned out to standard 9 pin DSUB.
- Boot mode selection switches

Software Features:
- Code Composer Studio for eZdsp
- F2808 eZdsp Diagnostics Utility
- Host and target source for Diagnostics, POST, and EEPROM programming

Kit Contents:
- F2808 eZdsp Board
- Power supply and USB cable

TMS320F24x Digital Signal Controllers

The **TMS320F241** & **TMS320F243** devices are members of the 24x generation of digital signal processor (DSP) controllers based on the TMS320C2000™ platform of 16-bit fixed-point DSPs. The F243 is a superset of the F241.

The **TMS320F240** (F240) device is a member of a family of DSP controllers based on the TMS320C2xx generation of 16-bit fixed-point digital signal processors. This family is optimized for digital motor/motion control applications.

The **TMS320LF240xA** devices are new members of the TMS320C24x™ generation of digital signal processor (DSP) controllers & part of the TMS320C2000™ platform of fixed-point DSPs. The 240xA devices offer the enhanced TMS320™ DSP architectural design of the C2xx core CPU for low-cost, low-power, and high-performance processing capabilities.

TMS320F28xx Digital Signal Controllers

The TMS320F280x™ generation of digital signal controllers offer 60 to 100 MIPS of 32-bit DSP performance, flash memory and are targeted to industrial automation, digital power supplies, automotive control, and advanced sensing applications. The C28x core offers the computational bandwidth to handle numerous sophisticated control algorithms in real-time, such as sensorless speed control, random PWM, and power factor correction. The F280x C code-efficiency rivals typical MCUs and is fully code compatible with current devices in the C2000 platform. F280x devices also implement up to 16 channels of TI's unique high-resolution pulse width modulation (HRPWM) technology, each with 150 pico-second resolution. The TMS320F281x generation of digital signal processor devices are highly integrated, high-performance solutions for demanding control applications.

Floating Point & Fixed Point Digital Signal Processors

A fixed-point processor is a processor that does arithmetic operations using integer arithmetic with no exponents. Devices in the TMS320 DSPfamily which have fixed-point processors are the '**C20x**, '**C24x**, '**C5x**, '**C54x**, and '**C62x** generations.
A floating-point processor is a processor capable of handling floating-point arithmetic where real operands are represented using exponents.Devices in the TMS320 DSP family that have floating-point processors are the 'C3x, 'C4x, and 'C67x generations.

DSP56300 Family of 24-Bit Digital Signal Processors

The Freescale DSP56300 family of digital signal processors uses a programmable, 24-bit, fixed-point core. This core is a high-performance, single-clock-cycle-per-instruction engine. The combination of powerful instruction set, multiple internal buses, DMA channels, on-chip program and data memories, external buses, standard peripherals, and power management of the DSP56300 family make it an excellent solution for wireless or wireline DSP applications from individual subscriber to infrastructure, as well as multimedia and high-end audio applications.

DSP56300 Core Features:

- 100 million multiply-accumulates per second (MMACS) with a 100 MHz clock
- Fully pipelined 24 x 24-bit parallel multiplier-accumulator (MAC)
- 56-bit parallel barrel shifter
- 24-bit or 16-bit arithmetic support under software control
- On-chip instruction cache controller
- On-chip concurrent six-channel DMA controller
- On-chip emulation (OnCE) module
- JTAG test access port (TAP)
- Address Tracing mode reflects internal accesses at the external port

FRAM Processor Companions

RAMTRON

New

These processor companions are complete support and peripheral solutions with highly integrated mixed signal functions for processor-based systems. They combine fast read/write performance with nonvolatile FRAM.

FRAM Nonvolatile State Savers

RAMTRON

New

These nonvolatile state savers are logic building blocks that provide continuous access to nonvolatile system settings without reading a memory. They save the state of signals on demand and automatically restore signals to their correct state upon power up. They can store signals that may change without notice, and allow the storage of system settings without the system overhead of serial memory.

Microperipheral and Interface Products

Product Range	V_{cc}	Reset	Output	Typical T_{RPU}	Typical I_{DD}
MCP100	1.0V-5.5V	Active Low	CMOS Push-Pull	350ms	45µA
MCP101	1.0V-5.5V	Active High	CMOS Push-Pull	350ms	45µA
MCP102	1.0V-5.5V	Active Low	CMOS Push-Pull	120ms	1.75µA
MCP103	1.0V-5.5V	Active Low	CMOS Push-Pull	120ms	1.75µA
MCP111	1.0V-5.5V	Active Low	CMOS Open Drain	90µs	1µA
MCP112	1.0V-5.5V	Active Low	CMOS Open Drain	90µs	1µA
MCP120	1.0V-5.5V	Active Low	CMOS Open-Drain	350ms	45µA
MCP121	1.0V-5.5V	Active Low	CMOS Open-Drain	120ms	45µA
MCP130	1.0V-5.5V	Active Low	CMOS Open-Drain w/5kΩ Pull-Up	350ms	20µA
MCP131	1.0V-5.5V	Active Low	CMOS Open-Drain	120ms	1.75µA

Note: MCP809 and MCP810 are similiar to MCP100 and MCP101, respectively, but available in 3-pin SOT-23, B bondout.

Trip points for all parts:	Min.	Max.
	2.63	2.70
	3.0	3.15
	4.25	4.50
	4.50	4.75

The manufacturers part number notation:
e.g. MCP100-315DI/TO.....
MCP100 Product range
315 denotes the maximum trip point of 3.15
D/F/G/H denotes D/F/G/H bondout, blank-non bondout type
TO denotes 3/TO-92, TT-3/SOT-23, SN-8/SOIC packages

VSUPEV / VSUPEV2 Voltage Supervisor Evaluation Boards

MICROCHIP

VSUPEV2

The **VSUPEV** quickly evaluates operation of Voltage Supervisors and Detectors in the Microchip SOT-23-3 package. The generic board evaluates SOT-23-3 devices such as LDO and Votage References. Four blank PCBs are also included for testing multiple devices.
The **VSUPEV2** is a blank PCB that allows quick evaluation of Voltage Supervisors and Detectors in the Microchip SOT-23-5 /6 packages. This PCB supports many Microchip devices, including the non-volatile digital potentiometer and PIC10F2xx devices.

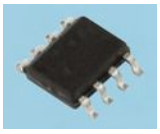
LM372x Reset Circuits



The LM3722/LM3723/LM3724 microprocessor supervisory circuits monitor the power supplies in microprocessor and digital systems. They provide a reset to the microprocessor during power-up, power-down, brown-out conditions, and manual reset.

STM Supervisor & Reset Circuits

This set of Supervisors are self-contained devices which provide microprocessor supervisory functions. A precision voltage reference and comparator monitors the Vcc input for out of tolerance conditions, when an invalid condition is detected the reset is forced high or low depending on the device. Most devices include a watchdog timer and a power-fail comparator to warn of any impending power failure.

STM1001/809/810/811/812 Microprocessor Reset Circuits

STM1001/809/810/811/812 Microprocessor Reset Circuits are low-power supervisory devices used to monitor power supplies. They perform a single function: asserting a reset signal whenever the VCC supply voltage drops below a preset value and keeping it asserted until VCC has risen above the preset threshold for a minimum periodof time (trec). The STM811/812 also provide a push-button reset input (MR).

Features:

- Precision Monitoring of 3V, 3.3V, and 5V Supply voltages
- Low Supply Current - 6µA (Typical)
- 140ms Reset Pulse Width (Minimum)
- Guaranteed RST/RST Assertion Down to VCC = 1.0V
- Operating Temperature: -40°C to 85°C (Industrial Grade)
- Small SOT23 and SOT143 package

Single Output Modules

EPSON TOYOCOM

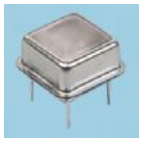
8 pin DIL Package - TTL Output (with output enable function)

Pin 1 = O/E
Pin 2 = GND
Pin 3 = OUTPUT
Pin 4 = +5V ±10%

These single output oscillators are housed in a DIL plastic package. The package has 4 pins spaced as the corner pins of a 0.3" 8 pin DIL. Outputs are at TTL levels.

	4 to 24MHz	32 to 50MHz
Output rise time	8ns	5ns
Output fall time	8ns	7ns
Supply current	25mA	35mA
Output Load	10TTL (50pF)	5TTL (50pF)

Temperature range -10°C to 70°C Duty cycle 40 to 60%
Frequency stability ±100ppm Mftrs. List No. SG531P4MHZ+ Frequency in MHz



210514

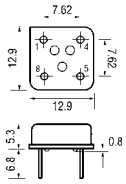
Single Output Modules

8 pin DIL - HCMOS Output

IQD Frequency Products

Pin 1 = NC
Pin 4 = GND I
Pin 5 = Output
Pin 8 = +5 ±10%

These single output oscillators are housed in a hermetically sealed metal package 13.2mm sq. with 4 pins spaced as the corners of an 0.3" 8 pin DIL. Outputs are at CMOS levels.



Output rise time 5ns Temperature stability ±100ppm Duty cycle 45 to 60% max.
Output fall time 5ns Max supply current 25mA 45 to 60% (MC)
Temperature range 0°C to 70°C Output load 15pF

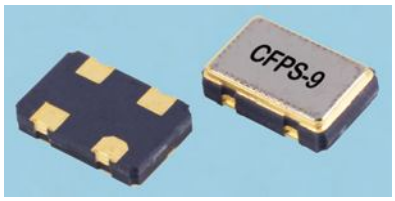
DXO-57 SMD Clock Oscillators

multicomp

New



These **DXO57** Quartz crystal oscillators are housed in a small 5x7mm ultra thin ceramic package. They have a 3.3V supply voltage, HCMOS/TTL output and Tri-state option.

CFPS-9 Clock Oscillators

- **Output Compatibility & Load:**
  - Tri-state HCMOS (3.3V)
  - Drive Capability 15pF max
- **Tri-state Operation:**
  - Logic '1' (>70% Vs) to pad 1 enables oscillator output
  - Logic '0' (<30% Vs) to pad 1 disables oscillator output; when disabled the oscillator output goes to the high impedance state
  - No connection to pad 1 enables oscillator output
- **Standby Current:**
  - 10µA max

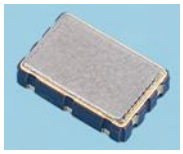
Single Output Modules

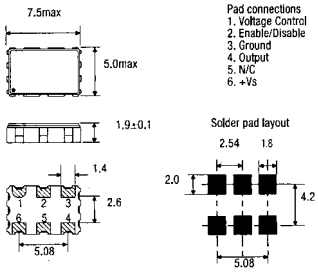
SaRonix

S1903 Series

SMD - 3.3V Tri-state CMOS, HCMOS, Output



A series of crystal low-current oscillators in a sub-miniature, low profile leadless ceramic package with gold-plated contact pads.



Supply Voltage: 3.3V±10%
Supply Current: 35mA max @ 3.3V
Operating Temp.: 0°C to +70°C
Output: 45/55%max @ 50% VDD @ 3.3V
Rise & Fall Times: 2ns max 20% to 80% VDD

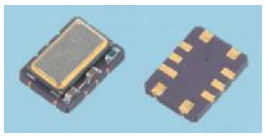
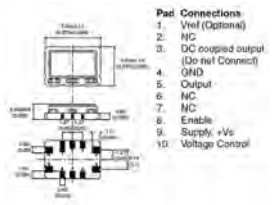
Voltage Controlled Crystal Oscillator

EPSON TOYOCOM



These crystals are 6 pin SMD, sized 7x5mm. The 27MHx VCXO crystal has a maximum supply current of 20 mA. Suitable for MPEG 2, wireless remote and video reference systems.



- Supply voltage 3V3 ±0.3
- Operating temperature DRC -20 to +70°C & GRC -40 to +85°C
- Stability ±35ppm
- Output load CMOS 15pF
- Output rise & fall time 4ns max
- Output enable/disable
- Current consumption 10mA max No load
- Duty Cycle 40/60%
- Pulling ±130ppm

16-pin SMD Temperature Compensated Crystal Oscillator

MAXIM

A range of surface mount temperature compensated crystal oscillators capable of operating at 3.3V (±10%). The DS4026 implements an on-chip temperature sensor lookup table, and a digital-to-analog converter (DAC) to adjust the frequency.

Supply Voltage	3.3V Typ
Supply Current	2.5mA Typ
Deviation	Less than ±4.6ppm over 10 years
Output Waveform	Push-Pull CMOS Square Wave

FIPO™ Programmable Oscillators

CARDINAL COMPONENTS

- Create oscillators, at user specified frequency, within seconds, in the field
- Low Jitter
- Internal frequency reference for single step programming
- Frequency ranges available from 1MHz to 133MHz
- Oscillator characteristics selected via keypad and VCD display

Oscillators with identifier A7BR frequency ranges are available from ±50ppm over -40°C to +85°C, with identifier A5BC frequency ranges are available from ±25ppm over -20°C to +70°C.

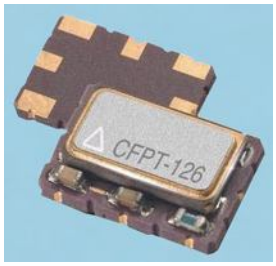
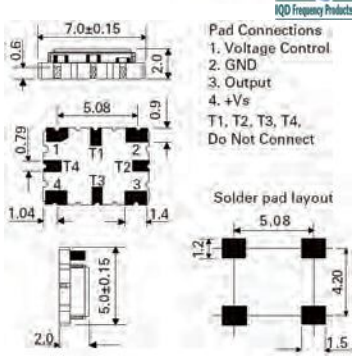
CFPS-107 / 108 / 109 Clock Oscillators



New



- **Output Compatibility & Load:**
  - Tri-state CMOS
  - Drive Capability 15pF max
- **Tri-state Operation:**
  - Logic '1' to pad 1 enables oscillator output
  - Logic '0' to pad 1 disables oscillator output; when disabled the oscillator output goes to the high impedance state
  - No connection to pad 1 enables oscillator output
- **Supply Voltage:**
  - 1.8V (CFPS-107)
  - 2.5V (CFPS-108)
  - 3.3V (CFPS-109)
- **Ageing:**
  - ±3ppm max per year

CFPV-45 Voltage Controlled Oscillators

- **Output Compatibility & Load:**
  - Tri-state HCMOS
  - Drive Capability: 15pF max
- **Tri-state Operation:**
  - Logic '1' (>2.5V) to pad 2 enables oscillator output
  - Logic '0' (<0.5V) to pad 2 disables oscillator output; when disabled the oscillator output goes to the high impedance state
  - No connection pad 2 enables oscillator output
- **Supply Voltage:**
  - 3.3V
- **Voltage Control (pad 1):**
  - 1.65V ±1.65V
- **Linearity:**
  - Positive < ±10%
- **Input Impedance (voltage control, pad 1):**
  - 50kW min
- **Modulation Bandwidth:**
  - >10kHz (@-3dB, Vc=2.5V)
- **Phase Jitter:**
  - 20ps max @ 1sigma

32.768kHz Crystal Oscillator SG-3030/40 (JC,JF,LC)

EPSON TOYOCOM

JC JF LC

- Operating temperature -40 to +85°C
- Frequency tolerance 5±23ppm
- Stability +10 to 120ppm
- Output load CMOS 15pF max
- Duty cycle 45/55%

These ICs are SMD 32.768kHz crystal oscillator with built in watch crystal. Low power consumption with CMOS IC and VIO controls swing amplitude
