HC49/U

HC49/S

HD49/SM

The **HC-49/U** is for use with general and industrial microcontrollers. It is a well established, cost effective product with a wide frequency range and superior resistance weld HC-49/U metal case.

The **HC49/S** and **HC49/SM** are also for use with general and industrial microcontrollers, but have been designed for applications where board height is critical. Their low profile stands at just 4mm in height.

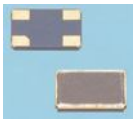
HC49SFWB (HC-49/U-S) Leaded Crystal Units



A range of Crystals ideal for consumer products like Car Audio Applications and Digial Electronics. The devices are suitable for high density assembly and mass production.

Load Capacitance 12pF
Frequency Stability ±50ppm
Frequency Temperature Stability ±50ppm
Operating Temperature Range -10°C to 70°C
Package HC-49/U-S

494610

CX5032SB (CX-96F) SMD Crystal Units

A range of Crystals ideal for Mobile Comms, Bluetooth and Wireless LAN applications. These devices feature a reference frequency for telecommunication systems and are available in a ceramic package. They are reflow compatible.

Load Capacitance 10pF
Frequency Stability ±10ppm
Frequency Temperature Stability ±15ppm
Operating Temperature Range -30°C to 85°C
Package Size 4.9 x 3.1mm

494543

CX5032GB (CX-53F) SMD Crystal Units

A range of Crystals ideal for audio-visual, office equipment and digital electronics applications. They come in a ceramic package and are reflow compatible.

Load Capacitance 12pF
Frequency Stability ±50ppm
Frequency Temperature Stability ±50ppm
Operating Temperature Range -10°C to 70°C
Package Size 5 x 3.2mm

CX49GFWB (CX-49G) SMD Leaded Crystal Units

A range of Crystals ideal for consumer products like Car Audio Applications and Digial Electronics. The devices are suitable for high density assembly and mass production.

Load Capacitance 12pF
Frequency Stability ±50ppm
Frequency Temperature Stability ±50ppm
Operating Temperature Range -10°C to 70°C
Package 10.8 x 4.5mm

DX-57 Crystal Units

multicomp

New

The DX-57 is for use in Communication equipment, PDA's and Wireless security systems. It is a cost effective, ultra thin surface mount device. It is available in a small 5 x 7mm Size 5 x 7mm, with a Maximum height of just 1.4mm.

Surface Mount Crystals

NKS7 Series

SaRonix

Frequency Range:	8.000MHz to 30MHz (Fundamental) 30MHz to 83MHz (3rd Overtone)
Operating temperature:	-20°C to +70°C
Temperature Stability:	±50ppm
Load Capacitance:	8 to 32pF, or Series Resonant
Drive Level:	500µW max.
Shunt Capacitance:	7pF max.

A series of miniature crystals in a standard 5 x 7mm ceramic package.

Low Jitter SAW Oscillator

EPSON TOYOCOM

This family of ICs are very low jitter / low phase noise LVDS & LVPECL SAW based oscillator with high fundamental frequencies for communications applications, with output enable feature.

- Supply voltage 3V3±0.3
- Operating temperature: 0 to +70°C
- Stability: ±100ppm
- Output Loads: LHPA LVDS 100 Ω & PHPA LVPECL 50Ω
- Output rise & fall time: 400pS max
- Output enable/disable
- Current consumptions: LHPA 45mA & PHPA 100mA max.
- Duty Cycle 45/55%

Surface Acoustic Wave (SAW) Resonators and Filters

EPCOS

Surface Acoustic Wave (SAW) resonators and front-end filters are key components in Remote Control Applications, which transmit in Europe at 433.92 MHz or 868-870 MHZ.
In a transmitter, an oscillator controlled by a SAW resonator oscillates to generate an RF carrier signal, modulated by turning the oscillator on and off.
This coded signal is transmitted out via the antenna and received by the antenna at the receiver to a distance of up to 300 ft. The receiver picks up the coded carrier with some environmental noise. The noise can be filtered out by a narrow band, high selectivity, SAW front-end filter.
The filtered RF carrier is converted down by a mixer with a stable signal from an oscillator, controlled by another SAW resonator, to an IF (typ. 10.7 MHZ or 500kHz), which is fed into a decoder IC.

Typical applications:
- Keyless entry (RKE, wireless operation of a central locking system in a car)
- Wireless Tyre air pressure management (TAPM)
- Short range data transmission
- Garage door openers
- Alarm systems
- Electronic toll

Features:
- Source Power, OdBm
- Terminating source / load impedence, 50 Ohms
- Temperature Coeff. of frequency, 0.03ppm / k^2
- Terminals, Ni - gold plated

A range of small, lightweight, ultra low cost resonators designed for use in oscillator circuits. These components are made of high stability piezoelectric ceramics and have been developed to function as a reference signal generator (the frequency is primary adjusted by the size and thickness of the ceramic element). Typical applications include TVs, VCRs, automotive electronic devices, telephones, copiers, cameras, voice synsthesisers, communication equipment, remote control units, etc.

Ceramic resonators may also be used as the timing element in most microprocessor based equipment.

Initial tolerance ±0.5%.

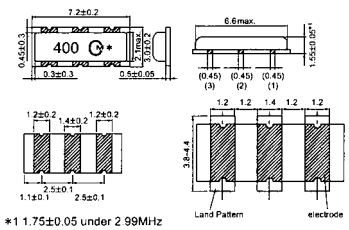
ZTT Series Ceramic Resonators

Features:
- Built-In Capacitor
- Low Cost
- Industry Standard Dimensions
- Good Stability



Applications:
- Microprocessor Systems
- Datacommunications
- Consumer Electronics
- Automotive Electronics

CSTCC Ceramic Resonators

*1 1.75±0.05 under 2.99MHz

- The CSTCC/CR series of SMD Resonators offer an alternative to quartz crystal as a clock source for ICs
- Three terminal design includes built in loading capacitors which reduces external circuitry and cost of design
- Smaller than equivalent quartz crystal
- Rise time for ceramic resonator is approx. 1/100th that for quartz crystal
- Total tolerance as low as ±0.5%

CSTCR Ceramic Resonators

CSTCR Series

- The CSTCR range are the world's smallest resonators at these frequencies
- The gold terminals are compatable with conductive adhesive based Pb free process
- Three terminal design includes built in loading capacitors which reduces external circuitry and cost of design
- Smaller than equivalent quartz crystal
- Rise time for ceramic resonator is approx. 1/100th that for quartz crystal
- Total tolerance as low as ±0.5%

Ceramic Resonators - CERALOCK®

New

CSTCE-G Series

Murata's ceramic processing technology and unique piezo-electric material has led to the development of a range of small and thin ceramic resonators (CERALOCK) that offer high oscillation frequency and remarkable oscillation tolerance. These products are designed for use as a stable timing source for microprocessors.

- High reliability
- wide temperature range
- Oscillation circuits do not require external load capacitors
- The resonators are extremely small and have a low profile
- No adjustment is necessary for oscillation circuits

Delay Lines

DS1000 - 5 Tap Silicon Delay Line

MAXIM

A TTL/CMOS compatible series with 5 equally spaced taps providing precise delays from 4ns to 500ns, with nominal accuracy of ±5% or ±2ns. Reproduces the input logic state at the output after a fixed delay as specified by the part number, with equal precision at both leading and trailing edges.

DS1021 - Programmable 8-bit Silicon Delay Line

MAXIM

A TTL/CMOS compatible series consisting of 8-bit user programmable CMOS integrated circuit. Delay values are programmed using either the 3-wire serial port or the 8-bit parallel port. The input logic state is reproduced at the output without inversion, after the user-determined delay.

This family of CODEC ICs are a low power, high quality mono/stereo devices designed for portable applications, operating at voltages down to 1.42V to save power.
The **WM8731** has a stereo line and mono microphone level audio inputs, along with a mute function, programmable line level volume control and a bias voltage output suitable for an electret type microphone.Stereo 24-bit multi-bit sigma delta ADCs and DACs are used with oversampling digital interpolation and decimation filters. Digital audio input word lengths from 16-32 bits and sampling rates from 8kHz to 96kHz are supported. Stereo audio outputs are buffered for driving headphones from a programmable volume control, line level outputs are also provided along with anti-thump mute and power up/down circuitry. The device is controlled via a 2 or 3 wire serial interface. The interface provides access to all features including volume controls, mutes, de-emphasis and extensive power management facilities.
The **WM8750** interfaces to stereo or mono microphones and a stereo headphone. External component requirements are drastically reduced as no separate microphone or headphone amplifiers are required. Advanced on-chip digital signal processing performs graphic equaliser, 3-D sound enhancement and automatic level control for the microphone or line input. The WM8750 can operate as a master or a slave, with various master clock frequencies including 12 or 24MHz for USB devices, or standard 256fs rates like 12.288MHz and 24.576MHz. Different audio sample rates such as 96kHz, 48kHz, 44.1kHz are generated directly from the master clock without the need for an external PLL.
The **WM9713** is a dual CODEC processor, supporting Hi-Fi stereo Codec functions via the AC link interface, and additionally supporting voice Codec functions via a PCM type Synchronous Serial Port (SSP). A third Aux DAC is provided which may be used to support generation of supervisory tones, or ring-tones etc. at different sample rates to the main codec. The device can connect directly to a 4-wire or 5-wire touchpanel, mono or stereo microphones, stereo headphones and a stereo speaker, reducing total component count in the system. Cap-less connections to the headphones, speakers, and earpiece may be used also multiple analog input and output pins are provided for seamless integration with analog connected wireless communication devices. All device functions are accessed and controlled through a single AC-Link interface compliant with the AC'97 standard. The 24.576 MHz masterclock can be input directly or generated internally from a 13MHz (or other frequency) clock by an onboard PLL. The PLL supports a wide range of input clock from 2.048MHz to 78.6MHz. The WM9713L operates at supply voltages from 1.8V to 3.6V.
The **WM8974** contains is a differential or single ended mic amplifier, drivers for speakers or headphone, and a mono line output. Advanced Sigma Delta Converters are used along with digital decimation and interpolation filters to give high quality audio. Additional digital filtering options are available in the ADC path, to cater for application filtering such as wind noise reductio plus an advanced mixed signal ALC function with noise gate is provided. The digital audio interface supports A-law and μ-law companding. An on-chip PLL is provided to generate the required Master Clock from an external reference clock. The PLL clock can also be output if required elsewhere in the system. The speaker and mono outputs use a separate supply of up to 5V which enables increased output power.

Stereo and Mono ADCs

20 pin SSOP

24 pins QFN

The **WM8785/6** are a stereo audio ADC with differential inputs designed for high performance recordable media applications. Data is provided as a PCM output. Stereo 24-bit multi-bit sigma-delta ADCs are used with digital audio output word lengths of 16 to 32 bits. The device also has a high pass filter to remove residual DC offsets.
The **WM8950** is a low power, high quality mono ADC designed for portable applications such as Digital Still Camera, Digital Voice Recorder or games console accessories. The device integrates support for a differential or single ended mic. External component requirements are reduced as no separate microphone amplifiers are required. Advanced Sigma Delta Converters are used along with digital decimation filters to give high quality audio. Additional digital filtering options are available, to cater for application filtering such as wind noise reduction, noise rejection, plus an advanced mixed signal ALC function with noise gate is provided. An on-chip PLL is provided to generate the required Master Clock from an external reference clock. The PLL clock can also be output if required elsewhere in the system. The WM8950 operates at supply voltages from 2.5 to 3.6V, although the digital supplies can operate at voltages down to 1.71V to save power. Different sections of the chip can also be powered down under software control by way of the selectable two or three wire control interface.

This family of ICs are high performance stereo DAC designed for audio applications such as CD, DVD, home theater systems, set top boxes and digital TV. Supports data input word lengths from 16 to 32-bits and sampling rates up to 192kHz. Additional features include serial interface port, digital interpolation filter, multi-bit sigma delta modulator and stereo DAC. The ICs supports two connection schemes for audio DAC control, the SPI-compatible serial control port provides access to a wide range of features including onchip mute, attenuation and phase reversal and a hardware controllable interface is also available.

RL Re-reeling available

A/D and D/A Converters - continued

3-channel CCD/CIS ADC

- 16-bit resolution ADC
- 12MSPS conversion rate
- Low power - 320mW typ.
- V single supply or 5V/3.3V dual supply operation
- Single or 3-channel operation
- Correlated double sampling
- 8 or 4-bit wide multiplexed data output formats
- Serial control interface

The WM8196 is a 16-bit analogue front end/digitiser IC that processes and digitises the analogue output signals from CCD sensors or Contact Image Sensors (CIS) at pixel sample rates of up to 12MSPS.
The device has three separate analogue signal processing channels. Each channel contains Reset Level Clamping, Correlated Double Sampling and Programmable Gain and Offset adjust functions. Three multiplexers allow single channel processing. The digital output data is available in 8, 7 or 4-bit wide multiplexed format.
An internal 4-bit DAC is supplied for internal reference level generation. This may be used during CDS to reference CIS signals or during Reset Level Clamping to clamp CCD signals. An external reference level may also be supplied. ADC references are generated internally.

MCP3221 12-bit A/D PICtail Demo Board

Features:
- Allows simple evaluation of device performance using USB interface and DataView software
- On-board PIC16C745 USB for DataView communication
- Data is displayed in an easy-to-read format graphical complete with data logging
- Easy to interface to PICkit 1 evaluation system
- Ready-to-go DC voltage generation using mechanical potentiometer

The MCP3221 PICtail™ Demonstration Board is designed to demonstrate Microchip's MCP3221 device. The demonstration uses DataView™ Windows software for a graphical real time data analysis from the board through USB. This demo board can also be used for firmware development to the MCP3221 device using the PICkit™ 1 Flash Starter Kit.

Mixed Signal PICtail™ Demo Board

The Mixed Signal PICtail™ Evaluation Board enables quick and accurate evaluation of the performance of several Microchip DACs, ADCs, LDOs, Vrefs and Operational Amplifiers. The board interfaces to the PICkit™1 Flash Starter Kit or can utilize the on-board PIC16F767 for stand-alone" operation. The user can take advantage of the existing PIC microcontroller library of software routines or develop their own routines. The PICmicrocontroller can select which DAC to configure, which ADC channel to read, and utilize a dual op-amp for various buffer implementations.

Features:
- 4 layer board for low noise evaluation
- Supports the following Microchip Mixed Signal devices (surface mount footprint):
- MCP492X SPI DACs
- TC132X I2C DACs
- MCP330X and MCP320X SPI SAR ADCs
- MCP3221 and MCP3021 I2C SAR ADCs
- MCP1525 and MCP1541 Voltage References
- MCP170X LDOs
- PIC16F767-I/SS footprint with ICSP™ (In-Circuit Serial Programming™) interface
- Sample kit contains a number of applicable Microchip DACs, ADCs, LDOs and Vrefs

MCP355X Tiny Application Sensor Demo Board

This board is designed to demonstrate the performance of the MCP3550/1/3 devices in a simple low-cost application. The circuit uses a ratiometric sensor configuration and uses the system power supply as the voltage reference. The extreme common mode rejection capability of the MCP355X devices, along with their excellent normal mode power supply rejection at 50 and 60 Hz, allows for excellent system performance.

Features:
- USB Interface to PC software DataView for graphical noise analysis
- Small 1" x 1" PCB design
- Jumper to select between reference supply as VDD or on-board LM4140

MCP3551 Delta-Sigma ADC Demo Board

The MCP3551 Delta-Sigma ADC Demo Board is designed to demonstrate Microchip Technology's MCP3551 22-Bit Delta-Sigma Analog-to-Digital (ADC) Converter performance using DataView™ software installed on a PC. The demo board can be used with MPLAB® ICD2, PICkit™ 1 Flash Starter Kit, or PICkit™ 2 for developing demonstration/evaluation firmware. Optionally, a second installed MCP3551 can be used with and optional stimulus board (sold separately).

The board is designed to evaluate the MCP3551 with minimum Printed Circuit Board (PCB) noise. The PCB layout practices low-noise design to reduce the signal noise as much as possible in order to demonstrate the 22-Bit performance of the MCP3551.

Features:
- Three precision potentiometers for demonstrating the capabilities of the MCP3551
- On-board PIC18F4550 with USB for DataView communication
- USB interface for connecting to a PC
- Dataview™ software with easy-to-read format and data logging
- Three headers/connectors for programming the PICmicro® using any of the following:
  - PICkit™1 Flash Starter Kit
  - PICkit™2
  - MPLAB® ICD2 (debugger and programmer)

PCM420x Evaluation Modules

PCM4204EVM

The PCM4204EVM Evaluation Modules is a convenient platform for evaluating the performance of the PCM4204 analogue-to-digital. The ADC is a 4-channel 24-bit audio analogue-to-digital converter. The EVM include the following features:
- Simple configuration using onboard DIP switches
- Two (PCM4202EVM) or Four (PCM4204EVM) differential voltage inputs
- Low-Noise input buffer circuits
- Two (PCM4202EVM) or Four (PCM4204EVM) 75Ω AES3-encoded outputs, supporting operation up to 216kHz sampling rates
- Buffered Audio Serial Port
- two onboard system clock oscillators
- DSD Data Port supporting four-channel, 1-bit output or input data interface at 64x or 128x data rates (PCM4204EVM only)

DEM-PCM2902 Evaluation Module

The DEM-PCM2902 is an evaluation board for Texas Instrumentsś newly developed USB interface PCM2902. It is a Bus-powered codec with S/PDIF interface. It is operated by USB +5V Bus-power supply, a +3.3V REGIC is mounted to provide analog power supply for the CODEC and analog circuit. Stereo audio output can be provided at Stereo Mini Jack.

Features:
- Full speed transceivers
- Partical compliant descripters
- USB adaptive mode for playback
- USB acynchronous mode for record
- Bus powered

TLV320AIC3106EVM Evaluation Module

The TLV320AIC106EVM is an EVM manufactured in Texas Instruments modular EVM form factor. The modular form factor allows direct evaluation of the TLV320AIC3106 device, low power stereo audio codec. The modular EVM is also compatible with the 5-6KINTERFACE and HPA-MCUINTERFACE boards from Texas Instruments and third party boards that support TI's modular EVMs. Provisions are made for connecting all audio inputs and outputs either from the modular connectors or with on-board terminals, a headphone jack, and external microphone jack.

Features:
- Full-featured evaluation board for the TLV320AIC3106 stereo audio codec
- Modular design for use with a variety of digital signal processors (DSPs) and microcontroller interface boards
- USB connection to PC provides power, control, and streaming audio ata for easy evaluation
- Analog output signals from the TLV320AIC3106EVM are available on top and bottom connectors
- On-board microphone for ADC evaluation

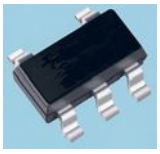
LMP223x Micropower 1.8V Precision Single/Dual Op Amp
LMP7721MA 17MHz GBWP Op Amp

National Semiconductor



New

8 pin MSOP

8 pin SOIC

5 pin SOT23

LMP223x

- Gain Bandwidth Product 130KHz
- Operating Temperature -40°C to 125°C
- Input Offset Voltage Max 150µV
- Supply Voltage 1.6V to 5.5V
- Supply Current 10µA per Channel
- Input Bias Current 20fA
- PSRR 120dB & CMRR 97dB

The LMP2231/2 are single/dual micropower precision amplifiers designed for battery powered applications. The 1.8V to 5.0V guaranteed supply voltage range and quiescent power consumption of only 18µW/29µW extend the battery life in portable battery operated systems. The high impedance CMOS input makes it ideal for instrumentation and other sensor interface applications. The precise specifications make the devices suitable for maintaining system accuracy and long term stability. The LMP2231/2 has a rail-to-rail output that swings 15 mV from the supply voltage, which increases system dynamic range. The common mode input voltage range extends 200 mV below the negative supply, thus the devices are an ideal choice for use in single supply applications with ground sensing.

New

This family of devices are high voltage, high output current operational amplifiers designed to drive resistive, inductive and capacitive loads. The Op Amps are available in single and dual amplifiers in a single package and are single or dual supply operation. Typical applications are motor and motion control.

RL Re-reeling available

MCP6S22 PGA PICtail Demo Board

The MCP6S22 PGA PICtail™Demo Board is used to evaluate and demonstrate Microchip Technology's MCP6S21/2/6/8 Programmable and MCP6S91/2/3 Gain Amplifier (PGA) families.
It is Interfaced with Microchip's PICkit™ 1 Flash Starter Kit to demonstrate firmware integration between the PIC MCU and PGA devices, while allowing the designer to modify and develop firmware for specific requirements.
The MCP6S22 PGA PICtail™Demo Board can also be used in stand-alone mode, wherein the board uses a USB interface to communicate directly to a PC and Graphical User Interface (GUI) to display the PGA output voltage.

Features:

- Demonstrates MCP6S22/92 PGA functionality
- Interfaces to the PICKit™ 1 Flash Starter kit
- Interfaces directly to a PC via the USB port for stand-alone mode of operation
- 13-Bit Analog-to-Digital Converter (ADC) with SPI interface
- An optical sensor circuit connects to the PGA
- An adjustable voltage source connects to the PGA
- Four-layer PCB with separate ground and power supply planes provide noise immunity

	Mftr.	Pins	Description	Mftrs. List No.	Order Code	Price Each 1+	10+	100+	250+	500+
101	TI	14 / PDIP	Precision Low Drift 4 to 20mA Two Wire Transmitter	XTR101AP.	NEW 164-8756	11.53	9.65	8.84	7.99	7.78
106	TI	14 / SOIC	4-20mA Current Transmitter with Bridge Excitation & Linearization	XTR106U.	NEW SMD 164-8757	7.59	6.58	5.69	5.14	5.01
116	TI	8 / SOIC	4-20mA Current Loop Transmitter	XTR116U.	NEW SMD 164-8758	1.99	1.58	1.32	1.22	1.17
193	TI	5 / SOT-23	Common Mode Voltage -16V to 80V Current Shunt Monitor	INA193AIDBVT	NEW SMD 156-4940	1.82	1.50	1.34	1.10	0.92
193	TI	5 / SOT-23	Voltage Output High Side Measurement Current Shunt Monitor	INA193AIDBVT.	NEW SMD 164-8651	1.38	1.10	0.91	0.83	0.80
195	TI	5 / SOT-23	Common Mode Voltage -16V to 80V Current Shunt Monitor	INA195AIDBVT	NEW SMD 156-4941	1.82	1.50	1.34	1.10	0.92
196	TI	5 / SOT-23	Common Mode Voltage -16V to 80V Current Shunt Monitor	INA196AIDBVT	NEW SMD 156-4942	1.82	1.50	1.34	1.10	0.92
198	TI	5 / SOT-23	Common Mode Voltage -16V to 80V Current Shunt Monitor	INA198AIDBVT	NEW SMD 156-4943	1.82	1.50	1.34	1.10	0.92
1206	LT	8 / DIP	250mA/60MHz Current Feedback Amplifier	LT1206CN8#PBF	NEW 166-3393	5.93	4.44	3.55	2.96	2.66
1210	LT	7 / TO-220	1.1A 35MHz Current Feedback Amplifier	LT1210CT7#PBF.	NEW 166-3394	12.41	9.31	7.45	6.21	5.56
1223	LT	8 / DIP	100MHz Current Feedback Amplifier	LT1223CN8#PBF	133-0621	5.39	3.05	2.19	1.92	1.88
1395	LT	5 / SOT-23	Single 400MHz Current Feedback Amplifier	LT1395CS5#TRMPBF	NEW SMD 166-3758	2.03	1.58	1.26	1.04	0.94
1787	LT	8 / MSOP	Precision, High Side Current Sense Amplifiers	LT1787CMS8#PBF	SMD 133-0696	4.29	3.36	2.76	2.41	2.13
1787	LT	8 / MSOP	Precision, 60V, High Side Current Sense Amplifiers	LT1787HVCMS8#PBF	SMD 133-0697	5.87	4.59	3.73	3.29	2.93
3001	TI	8 / SOIC	420MHz High-speed, Current Feedback Op Amp. (0 to +70°C Temp. range)	THS3001CD	SMD 110-2958	5.44	3.70	2.99	– –	– –
3001	TI	8 / SOIC	420MHz High-speed, Current Feedback Op Amp. (-40 to +85°C Temp. range)	THS3001ID	SMD 110-2959	5.62	3.83	3.09	– –	– –
4080	MAX	8 / SOIC	Unidirectional Current-Sense Amplifiers with Voltage Output	MAX4080TASA+	NEW SMD 159-3368	1.57	1.21	1.10	0.92	0.78
4112	MAX	8 / SOIC	500MHz, Low Power, Current-Mode Feedback Amp. for Video applications	MAX4112ESA+	SMD 118-8064	3.15	2.58	2.11	1.79	– –
6100	LT	8 / MSOP	Precision, Gain Selectable High Side Current Sense Amplifier	LT6100IMS8#PBF	SMD 141-7731	2.44	1.41	1.16	– –	– –
6100	LT	8 / MSOP	Precision, Gain Selectable High Side Current Sense Amplifier	LT6100CMS8#PBF	SMD 133-0749	2.21	1.36	1.07	1.02	0.99
6100	LT	8 / MSOP	Op Amp, Current Sense	LT6100HMS8#PBF	SMD 133-0750	2.68	2.10	1.71	1.51	1.33
6101	LT	5 / SOT-23	High Voltage High Side Current Sense Amplifier	LTC6101HVACS5#TRMPBF	NEW SMD 166-3920	3.29	2.55	2.04	1.70	1.52
6101	LT	8 / MSOP	Current Sense Op Amp	LTC6101HVAHMS8#PBF	SMD 133-0968	4.27	3.34	2.71	2.38	2.11
6102	LT	8 / MSOP	Zero Drift High Side Current Sense Amplifier	LTC6102HVIMS8#PBF	SMD 143-2115	4.52	2.74	2.16	– –	– –
6102	LT	8 / MSOP	Zero Drift High Side Current Sense Amplifier	LTC6102CMS8#PBF	SMD 141-7725	3.27	1.96	1.56	– –	– –
6102	LT	8 / MSOP	Zero Drift High Side Current Sense Amplifier	LTC6102IMS#PBF	SMD 141-7726	3.55	2.05	1.69	– –	– –
6102	LT	8 / MSOP	Zero Drift High Side Current Sense Amplifier	LTC6102HMS#PBF	SMD 141-7727	4.08	2.52	2.46	– –	– –
6103	LT	8 / MSOP	Dual High Voltage, High Side Current Sense Amplifier	LTC6103IMS8#PBF	SMD 143-2116	3.41	1.96	1.60	– –	– –
6104	LT	8 / MSOP	High Voltage, High Side, Bi-Directional Current Sense Amplifier	LTC6104CMS8#PBF	SMD 141-7728	2.47	1.43	1.17	– –	– –
6104	LT	8 / MSOP	High Voltage, High Side, Bi-Directional Current Sense Amplifier	LTC6104IMS8#PBF	SMD 141-7729	2.85	1.63	1.34	– –	– –
6104	LT	8 / MSOP	High Voltage, High Side, Bi-Directional Current Sense Amplifier	LTC6104HMS8#PBF	SMD 141-7730	3.21	1.86	1.52	– –	– –
6105	LT	8 / MSOP	Precision R/R Input Current Sense Amplifier	LT6105CMS8#PBF	NEW SMD 166-3585	1.92	1.49	1.19	1.00	0.89
6106	LT	5 / SOT-23	36V High Side Current Sense Amplifier	LT6106CS5#TRMPBF	NEW SMD 166-3841	1.61	1.25	1.00	0.83	0.75

OutSmarts™ Balanced Line Drivers

THAT Corporation

Monolithic audio differential line drivers offering improved performance over conventional cross-coupled designs by the use of OutSmarts technology - a dual feedback-loop design that prevents the excessive ground currents typical of cross-coupled output stages (CCOS) when clipping into single-ended loads.
OutSmarts uses two individual negative-feedback loops to separately control the differential output voltage and common mode output currents, making the designs inherently more stable and less sensitive to component tolerances than common CCOSes. As a result, THAT's topology prevents the loss of common-mode feedback that plagues common CCOS designs when clipping into single-ended loads. This avoids excessive ground currents that would otherwise upset power supplies and create additional distortion, even in adjacent channels.

- Balanced, transformer-like floating output
- OutSmarts technology improves clipping into single-ended loads
- Stable driving long cables and capacitive loads

Output	18Vrms into 600Ω	Distortion	0.0007% @ 1kHz
Bandwidth	≥22Mhz	Noise	-101dBu
Slew Rate	15V/µs		

The 1646 is pin-compatible with the DRV134 and DRV135, as well as the SSM2142. The 1606 offers an advanced common-mode offset voltage reduction scheme, which requires a small single capacitor instead of the two electrolytics required by the 1646 and its pin-compatible cousins.

InGenius® High-CMRR Balanced Input Line Receivers

THAT Corporation

Series of InGenius balanced line receivers with good common mode rejection, not just on paper, but in real-world applications.
The patented InGenius input stage uses clever bootstrapping to raise its common-mode input impedance into the megohm range without the noise penalty from the obvious solution of using high-valued resistors.
Like transformers, InGenius line receivers maintain their high CMRR over a wide range of source impedance imbalances - even when fed from single-ended sources. But unlike transformers, these wide bandwidth solid state devices offer dc-coupling, low distortion, and transparent sound in a small package.

- Extremely high common-mode input impedance
- Maintains balance under real-world conditions
- Transformer-like performance in an IC

CMRR	90dB at 60Hz	Distortion	0.0006% THD
Bandwidth	≥22Mhz	Noise	-107dBu
Slew Rate	12V/µs

Balanced Line Receivers

THAT Corporation

Series of precision differential amplifiers designed for use as balanced line receivers for audio applications.
Laser trimmed in wafer form to give the precision resistor matching needed for high CMR performance and precise gain.
Manufactured in THAT Corporation's proprietary complementary dielectric isolation (DI) process, the THAT 1240-series provides the sonic benefits of discrete designs with the simplicity, reliability, matching, and small size of a fully integrated solution.

The THAT 1246 is pin-compatible with the INA137 and SSM2143, while the THAT 1240 is pin-compatible with the INA134 and the SSM2141.

Miscellaneous Amplifiers

Trimmable Blackmer® VCAs

THAT Corporation

THAT 2181 Series integrated circuit Blackmer voltage controlled amplifiers (VCAs) are high-performance current-in/current-out devices with two opposing-polarity, voltage-sensitive control ports. They offer wide-range exponential control of gain and attenuation with low signal distortion.
The parts are selected after packaging based primarily on after-trim THD and control-voltage feedthrough performance. In-circuit adjustment is required to achieve the guaranteed distortion and feedthrough performance.
THAT Blackmer VCAs are the successors to the original dbx line of VCAs. To overcome the problems related to limited GBW product, the 218X series of VCAs has topological enhancements that minimize the effect of non-linearities in the VCA drive circuitry on high frequency distortion. These VCAs do not exhibit the rising distortion at higher frequencies characteristic of VCAs built on a junction isolated process.

Pre-Trimmed Blackmer® VCAs

THAT Corporation

THAT 2180 Series integrated circuit Blackmer voltage controlled amplifiers (VCAs) are high-performance current-in/current-out devices with two opposing-polarity, voltage-sensitive control ports. They offer wide-range exponential control of gain and attenuation with low signal distortion.
The parts are trimmed during wafer processing to minimise THD and control-voltage feedthrough. After packaging, the parts are tested and graded based on the degree to which the trim survived packaging. No further adjustment is required to achieve the guaranteed distortion and feedthrough performance.
THAT Blackmer VCAs are the successors to the original dbx line of VCAs. To overcome the problems related to limited GBW product, the 218X series of VCAs has topological enhancements that minimize the effect of non-linearities in the VCA drive circuitry on high frequency distortion. These VCAs do not exhibit the rising distortion at higher frequencies characteristic of VCAs built on a junction isolated process.

Dynamic Range	≥120dB	Distortion	≤0.01% (2180A)

MCP6S2X PGA Evaluation Board

MICROCHIP

The MCP6S2X PGA Evaluation Board features the MCP6S21/91 and MCP6S26 devices. The PGA devices interface to a PIC16F676 providing versatile selection of input channels and gains to evaluate device performance.

A prototype area is available for user circuit interfacing. The inputs, outputs and reference voltage traces of the PGAs conveniently pass near the prototype area for ease of connection. Test point connectors are available to interface with external circuits.

Features:

- Device gains from 1 to 32 V/V can be configured
- Reference voltage inputs of 0V, 2.5V and 5.0V
- SMD pads for adding SMD connectors
- Reprogrammable PIC16F676 with ICSP™ (In-Circuit Serial Programming) interface

Power Amplifiers

Bipolar and MOSFET Power Amplifiers

The HY series of Power Amplifier Modules are a versatile range of building blocks for constructing high quality audio amplifiers with a minimum of additional components. The HY200x range includes the latest technology incorporating anti-thump circuitry and modules with on-board PSU components.

These modular hybrid amplifiers have been designed using Bipolar or MOSFET (HY2006/7) technology to provide high fidelity performance. Encapsulation to an integral heatsink together with internal circuitry providing output stage protection make them extremely rugged, both electrically and mechanically, and therefore suitable for all audio applications. For loudspeaker protection the use of a quickblow fuse is recommended - please refer to the data sheet.

The modules only require a minimum of external connection, and should be mounted to allow a vertical flow of air through the heatsink fins. T slots in the heatsink facilitate mounting using the nuts and screws provided.

The HY2000/1/2/3/4/5 series are switchable for 4 or 8 Ohm operation, the power supply requirements will change depending on this setting.
The modules HY2001, 2003, 2005, 2007 feature on-board rectifier and smoothing capacitors and therefore only require an AC source from a suitable transformer.
The modules HY2000/2002/2004/2006 require smoothing capacitors, rectifier and transformer.

Farnell

Silicon Oscillator from 1kHz to 170MHz

This is a range of solid-state instant clocks, which can be set to output a broad range of frequencies using a single resistor, SPI or I2C interface.

- Switching power supply clock reference
- Portable and battery powered equipment
- PDAs
- Mobilel phones
- Mobilel phones
- Clocking switched capacitor filters

CY36800 InstaClock Universal Programmable Clock Generator Development Kit

The CY36800 InstaClock Universal Programmable Clock Generator Development Kit contains the programming board with a USB cable, and 3 samples each of the CY22800 and CY22801 devices. When using the CY22800 and InstaClock software, users can select from a list of over 100+ different predefined configurations of commonly used frequencies in today's designs. The CY22801 enables users to generate custom clock configurations that are not supported by the CY22800. The CyberClocks software tool allows users to specify the XIN/CLKIN frequency, crystal load capacitance, and output frequencies for the CY22801.Both the CY22800 and CY22801 devices are programmed through the same programming board included in this kit. The selected configuration is then downloaded via USB to the programmer in a matter of moments.

Communications - Radio Frequency ICs

Octal LNA/VGA/AAF/ADC and Crosspoint Switch

The AD9271 contains eight channels of a variable gain amplifier (VGA) with low noise preamplifier (LNA); an antialiasing filter (AAF); and a 12-bit, 10 MSPS to 50 MSPS analog-to-digital converter (ADC).

Communications - Radio Frequency ICs - continued

Octal LNA/VGA/AAF/ADC and Crosspoint Switch - continued

It makes portable ultrasound increasingly realisable by combining eight channels of the receive signal chain applicable to both pulsed- and continuous-wave Doppler systems.

Low Noise MMIC Amplifiers

AVAGO TECHNOLOGIES

AMMP-6232 - 18 to 32 GHz GaAs LNA - an easy-to-use broadband, high gain, high linearity Low Noise Amplifier. The wide band and un-conditionally stable performance makes this MMIC ideal as a primary or sub-sequential low noise block or a transmitter driver. It has 4 gain stages and requires a 4V, 138mA power supply for optimal performance. This MMIC is fully SMT compatible with backside grounding and I/Os.

Features:
- Surface Mount Package, 5.0 x 5.0 x 1.25 mm
- Single Power Supply Pin
- Unconditionally Stable
- 50Ω Input and Output Match

Specifications (Vdd= 4.0V, Id= 138mA):
- RF Frequencies: 18 - 32 GHz
- High Output IP3: 29dBm
- High Small-Signal Gain: 23dB
- Typical Noise Figure: 3dB

Mftrs. List No.		Order Code	Price Each
AMMP-6232-BLKG	18 to 32 GHz GaAs High Linearity LNA	SMD 134-7198▲	27.88

MGA-645T6 - a GaAs LNA with Bypass/Shutdown Mode. It has low noise and high linearity. The Bypass/Shutdown mode enables the LNA to be bypassed during high input signal power and reduce current consumption. Its compact footprint and low profile coupled with low noise, high linearity make the MGA-645T6 ideal as an amplifier for mobile receivers in the WiMax, WLAN(802.11b/g), WiBro and DMB applications.

Features:
- 2.0 x 1.3 x 0.4 mm3 6-lead Ultra Thin Package
- Low bias current
- Simple matching network
- 1.5 GHz - 3 GHz operating range
- Adjustable bias current
- Low Noise Figure
- Bypass/Shutdown Mode using a single pin
- Low current consumption in Bypass Mode, ≤100uA
- Fully matched to 50 Ohm in Bypass Mode
- High Linearity (LNA and Bypass Mode)
- Low profile package

Typical Performance (2.4 GHz; 3V, 7mA)
- 15 dB Gain
- 1.1 dB Noise Figure with 9dB Input Return Loss
- +7 dBm Input IP3
- -5 dBm Input Power at 1dB gain compression
- 4.5 dB Insertion Loss in Bypass Mode
- 16dBm IIP3 in Bypass Mode (Pin = -20dBm)

Mftrs. List No.		Order Code	Price Each
MGA-645T6-BLKG	GaAs LNA with Bypass/Shutdown Mode	SMD 134-7882●	0.85

MGA-71543 - LNA with Bypass Switch - an easy-to-use GaAs MMIC designed for receiver systems. It features a minimum noise figure of 0.8 dB and 16 dB available gain from a single stage, feedback FET amplifier. The input and output are partially matched, requiring only a simple series/shunt inductor match to achieve low noise figure and VSWR into 50Ω.The MGA-71543 offers an integrated solution of LNA with adjustable IIP3 where the IIP3 can be fixed to a desired current level for the receiver's linearity requirements. The LNA has a bypass switch function, which provides low insertion loss at zero current. The bypass mode also boosts dynamic range when high level signal is being received.

Features:
- Operating frequency: 0.1 GHz ~ 6.0 GHz
- Noise figure: 0.8 dB (NFmin)
- Gain: 16 dB
- Average Idd = 2mA in CDMA handset
- Bypass switch on chip Loss = -5.6 dB (Id ≤ 5 µA), IIP3 = +35 dBm
- Adjustable input IP3: 0 to +9 dBm
- 2.7 V to 4.2V operation
- SOT-343/4-lead SC70 housing

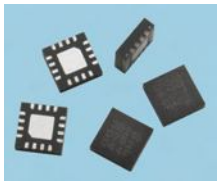
ALM-1222/1322 RF Amplifier Modules



The ALM-1222/1322 are low noise , high gain, low current, 50 OHM matched balanced amplifier modules operating in the 1.8 to 2.2GHz frequency range. All matching components are fully integrated within the module and the 50 OHM RF I/O pins are internally AC-coupled, making the modules easy to use with external DC supply bypass capacitors only.

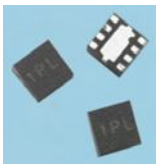
MGA-63xP8 Low Noise Amplifiers

The MGA-63xP8 family consists of easy to use low noise amplifiers with built-in active bias and current adjustable gain features. It offers superior linearity while maintaining good return loss and isolation.
The built-in active bias circuit takes care of the Vgs spread, requiring only one external resistor to set the bias current and gain over a wide dynamic range. The current adjustable gain feature enables customers to tune the LNA to the desired gain.



This series is housed in a 8 pin Thin, Small leadless package (TSLP) with the package bottom ground pad providing heat dissipation for enhanced reliability.

The MGA-631P8 is designed for optimum use from 400MHz to 1.5GHz
The MGA-632P8 is designed for optimum use from 1.4GHz to 3GHz

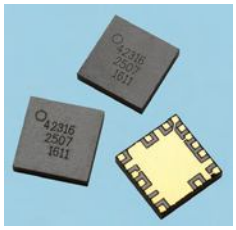
GaAs Medium Power Amplifiers



These Power Amplifiers are designed for wireless applications with best in class PAE (PA Efficiency) achieved through proprietary GaAs Enhancement-mode pHEMPT process.

The compact footprint, low profile (2.0x2.0x0.75mm) and thermal efficiency make these devices ideal as power amplifiers in space stringent applications.

6-20GHz Amplifiers

These easy to use amplifiers have integrated 50 OHM I/O match, DC blocking, self-bias and choke, eliminating tuning and assembly processes generally required by hybrid or discrete-FET based amplifiers.

The AMMP-6220 is a high-gain, Low Noise Amplifier ideal for gain stages facilitated by the broad and unconditionally stable performance.
The AMMP-5618 is a high power, medium gain general purpose amplifier, usable as a LO buffer or transmit driver.

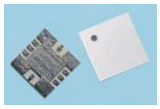
RF General Purpose Amplifiers



General purpose amplifiers are ideal for applications where signal gain is necessary. These GPAs combine the right level of gain, noise and power consumption specifications to meet the industry's most demanding applications. From general small-signal applications found in consumer and commercial to industrial and military applications.

Frequency Multipliers

The AMMP-6120 & 6130 are easy to use frequency multipliers for commercial communication systems. The MMIC is fabricated using PHEMT technology. The backside of this package part is both RF and DC ground. This helps simplify the assembly process and reduces assembly related performance variations. Integration matches input/output to 50 OHM, has input and output DC blocking capacitors and bias network.

The AMMP-6130 is a high gain, narrowband doubler. The MMIC takes a 15GHz input signal, passes it through a harmonic frequency multiplier (x2) and follows it through three stages of power amplification

Agilent's AMMP-6120 is a frequency multiplier (x2). The MMIC takes a 4 - 12GHz input signal and doubles it to 8 - 24 GHz. It has integrated amplification, matching, and harmonic suppression.

RF803 Series Encoder & Decoder IC's

New

The RF803 series are encoder and decoder devices. When combined with a Radio transmitter/receiver they may be used to create a remote control system with up to 3 I/O lines. The decoder IC incorporates an 'easy learn' pairing procedure to create a relationship between encoder and decoder. RF800 Series ICs perform all the necessary data manipulation and encryption for an optimum range reliable radio link whilst providing a simple user interface. In addition all RF800 series chipsets compatible with the RF Solutions range of remote control transmitter or receiver meaning that custom designs using any RF800 part can be used with an off the shelf counterpart.

Features:

- 3 digital I/O
- Serial Data output
- Connects directly to RF Modules
- Easy Enc / Dec Pairing Function
- Performs all Data Encryption for Reliable Operation
- Fast Activation / Deactivation Time
- Compatible with FireFly, FireBlade and 205 series Transmitters
- Sleep mode, for battery saving
- One to many / many to one relationship

RF Encoder Chipset

The RF Solutions RF600E and RF600D are encoder and decoder I/Cs. They have been designed to achieve the maximum possible range from any radio/infrared transmitter receiver set.

Unlike other encoder/decoder devices, the RF600E and RF600D provide an unprecedented level of security which prevents copying or grabbing, whilst also obtaining the optimum range from the transmitter and receiver.

The devices are very easy to use and can be inserted directly into a circuit. The RF600D has an Easy Learn feature enabling it to learn up to 50 unique transmitter encoders.

These devices enable a simple but secure remote telemetry application whilst obtaining the maximum range from the radio set.

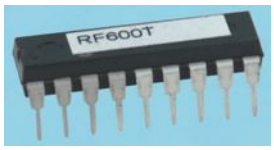
- Dual in line or surface mount packages
- Highly secure Keeloq protocol
- RF encoder and decoder I/Cs
- Simple to use, stand alone operation
- Achieves maximum range from RF modules
- 1-4 switch options (15 states)
- Decoder Digital and Serial outputs
- LED indication of transmission
- Easy Learn feature allows up to 50 transmitters to be learned
- Directly compatible with Keeloq keyfob encoders

RF600D Decoder

- 4.5V-5.5V operation
- 4 digital outputs (15 states)
- Asynchronous serial interface
- Low transmitter battery output

RF600E Encoder

- 2.0-6.6V operation
- Automatic battery level monitor
- Manchester encoding protocol



The Decoder I/C RF600D may be used with transmitter keyfobs 110C1-433A (Order Code 167-6041), 110C2-433A (Order Code 167-6043) and 110C3-433A (Order Code 167-6044)

RF Serial Communications Controller

RF600T

The RF600T provides a simple interface between TTL level asynchronous serial data sources and standard RF modules (transceiver, transmitter or receiver). The device allows for either broadcast or addressed point to point modes of operation and is simple to use with minimal interface required. Data packet generation is automatically performed, along with 'Manchester' encoding and CRC based error checking. In addition, in addressed mode, automatic retries ensure that the host is informed of successful or failed data packet delivery. The RF600T uses control lines to handle the flow of data to and from the host, and incorporates a 190-byte data buffer.

- Data communications controller
- Enables direct Serial Data In/Out
- Direct Microcontroller interface
- Addressed Mode with Acknowledge
- Broadcast mode
- Automatic retry
- Stand alone operation
- Achieves optimum range from RF modules
- Flow control option
- Two telemetry I/O lines (addressed mode only)
- Compatible with most RF modules

Hardware Features

- 3.0-5.5V operation (2.0-5.5V optional)
- 190 byte internal buffer
- 'Manchester' modulation on radio link
- CRC error checking
- 18-pin DIP/SOIC package
- 2 digital telemetry lines (addressed mode only)
- Asynchronous serial host interface

Applications

- Wireless RS232
- Cable replacement
- Alarm systems
- Communications systems
- Local area networking

Broadcast Video Products

The **GS2974A** is a high-speed BiCMOS integrated circuit designed to equalize and restore signals received over 75Ω co-axial cable. It is designed to support SMPTE 424M, SMPTE 292M and SMPTE 259M, and is optimized for performance at 1.485Gb/s and 2.97Gb/s.
The **GS2978** is a high-speed BiCMOS integrated circuit designed to drive one or two 75Ω co-axial cables. It may drive data rates up to 2.97Gb/s and provides two selectable slew rates in order to achieve compliance to SMPTE 424M, SMPTE 259M, SMPTE 344M and SMPTE 292M.
The **GS1531** is a multi-standard serializer with an integrated cable driver. When used in conjunction with the GO1555/GO1525 Voltage Controlled Oscillator, a transmit solution can be realized for HD-SDI, SD-SDI and DVB-ASI applications.
The **GS2975A** is a Multi-Rate Serial Digital Reclocker designed to automatically recover the embedded clock from a digital video signal and re-time the incoming video data. It will recover the embedded clock signal and re-time the data from a SMPTE 424M, SMPTE 292M, or SMPTE 259M-C compliant digital video signal.
The **GS9091B** is a 270Mb/s equalizing and reclocking deserializer with an internal FIFO. It provides a complete receive solution for SD-SDI and DVB-ASI applications. In addition to this, the GS9091B performs NRZI -to-NRZ decoding, descrambling as per SMPTE 259M-C, and word alignment when operating in SMPTE mode.
The **GS1559** is a reclocking deserializer with a serial loop-through cable driver. It also includes a range of data processing functions such as error detection and correction, automatic standards detection, and EDH support.
The **GO1555** is a self contained, miniature Voltage Controlled Oscillator. It produces a clean 1.485GHz reference clock signal with low spurious noise content. It is designed to drive 50Ω strip lines.
The **GS4915** provides a low jitter clock output when fed with an HD or SD video clock input. Other input clock frequencies between 12MHz and 165MHz can be automatically passed through to the GS4915 outputs. It can operate in either auto or fixed frequency mode.
The **GS4911B** is a highly flexible, digitally controlled clock synthesis circuit and timing generator with genlock capability. It can be used to generate video and audio clocks and timing signals, and allows multiple devices to be genlocked to an input reference

Evaluation Boards for ISM Band Transmitters/ Transceivers

The ADF70xx Series of Transmitters and ADF702x Series of Transceivers from ADI are suitable for automatic meter reading (AMR), Industrial Automation, alarm and security systems, home automation systems, remote controls and other wireless network & telemetry systems where low-power consumption and very long range are required.

These daughter boards allow the functionality and performance of the ADF7012/ADF7020-1 to be easily evaluated. To control the ADF7020/ADF7020-1 register settings via the PC you will need the EVAL-ADF70XXMBZ mother board.

* This evaluation board does not have loop filter, matching network, reference crystal or inductor. To set the desired frequency, consult the datasheet for choice of inductor.

PMA71xx Transmitter ICs for Wireless Control

The PMA71xx family contains a fully integrated VCO and integer N PLL synthesizer, a high efficiency power amplifier with selectable output power, an embedded 8051 micro-controller with 6kbyte Flash and 10 GPIOs. The internal multi-channel 10-bit ADC with its flexible high-gain settings can be used as an interface for a broad variety of analog sensors.
The integrated LF-Receiver enables wireless wake-up in battery operated applications for ultra-long-lifetime or even contactless configuration of the device. An associated software function library provides powerful functions like AES-encryption.
All devices are designed for lowest current consumption and include an advanced power control system to save battery life time. The multiband capability allows the usage of

Communications - Radio Frequency ICs - continued

PMA71xx Transmitter ICs for Wireless Control - continued

only one device for four different frequency bands and as such reducing development time and costs.

PMA 7105: ASK/FSK transmitter and embedded microcontroller, ideal for remote controls.
PMA 7106: ASK/FSK Transmitter with integrated microcontroller, additional 3-channel 10 bit ADC with flexible gain settings, targeting wireless sensor applications.
PMA 7107: ASK/FSK Transmitter with integrated microcontroller, additional LF receiver for applications requiring wireless wake-up or contactless device configuration.
PMA 7110: ASK/FSK Transmitter with integrated microcontroller, integrated 3-channel 10 bit ADC and LF receiver for highly sophisticated wireless systems.

Programmable Compandors

ON Semiconductor

These devices are dual-channel, high-performance gain control circuit in which either channel may be used for dynamic range compression or expansion. Each channel has a full-wave rectifier to detect the average value of the signal, a linearized temperature-compensated variable gain cell, and an operational amplifier. Typical applications are radio communications systems, modems, telephone, and satellite broadcast/receive audio systems.

AD8339 Evaluation Board

ANALOG DEVICES

New

This evaluation board is used for the evaluation of the AD8339 Quad I/Q Demodulator and Phase Shifter. Four single-ended RF inputs can be phase aligned using the LNA inputs of an AD8334 and the 16 phase adjustment options of the AD8339. The RF input signals can be derived from three sources, user selectable by jumpers. Test points enable signal tracing at various circuit nodes. The AD8339 requires dual power supplies. A 3.3 V on-board regulator provides power for the USB and EEPROM devices.

Communications - Embedded Connectivity

iWiFi Secure Socket and Evaluation Board

ConnectOne

iW-SM2128MW-EU

II-EVB-361MW-EU-220

New

The iW-SM2128MW-EU Secure Socket iWiFi is a secure serial-to-wireless LAN device server module that also acts as a bridge to connect serial devices to wireless LANs. It includes the iChip Communication Controller chip and Marvell WiFi chipset. It is packaged in RoHS-compliant SocketModem form factor and uses the standard SocketModem pin-out.

Features:
Security:
- Acts as a security gap between the host application and the network
- One secure SSL3/TLS1 socket
- Provides WEP, WPA and WPA2 wireless LAN security
- Includes a true hardware random number generator

Protocols:
- Up to 10 simultaneous TCP/UDP sockets and two listening sockets
- HTTP client
- DHCP client and server
- Sending and receiving textual email and binary email with attachments

The II-EVB-361MW is an evaluation platform for the Secure Socket iWiFi Internet Controller. Secure Socket iWiFi is a secure serial-to-Wireless LAN device server module that also acts as a bridge to connect serial devices to wireless LANs. Secure Socket iWiFi enables sending and receiving textual and binary data, MIME-encoded email messages; downloading HTML pages or files from a Web server, or items from within a page. It also includes an FTP client and a Telnet client. Secure Socket iWiFi supports numerous security protocols like SSL3/TLS1, 64/128-bit WEP.

Included in the box:
- The II-EVB- 361MW motherboard including Secure Socket iWiFi (iW-SM2128MW)
- A serial cable with two DB-9 connectors
- Antenna
- Power supply adaptor (110V/220V)

Wi. Development Kits

RADIOTRONIX

New

The RK-Wi.232EUR™ development kit is designed for the evaluation and design of the Wi.232EUR-R™ embedded radio module. This module operates in the 868-870 MHz band and can be used to transmit/receive data for virtually any wireless application. Its built-in protocol controller makes adding wireless communications to your product quick and easy.

Features:
- 6 Channels in narrowband mode
- 2 Channels in wideband mode
- 152.34 kbit/sec. Max RF data rate
- 16 bit CRC error checking
- True UART to Antenna solution
- PHY and MAC layer protocol built in
- 115 dB Link Budget

Kit Includes:
- 1x Development Case
- 1x Development Utility and Documentation CD
- 2x Development Boards
- 2x WI.232EUR-EVM-R modules (pinned)
- 2x 900 MHz Antennas
- 2x RS-232 Cables
- 2x USB Cables
- 6x AAA Batteries
- Quick Start Guide

RK-WI.232EUR-R

The RK-Wi.FS24-100ST development kit is designed to support the Wi.FS24-100ST™ zigbee-ready 802.15.4 radio module. It provides the end user the ability to quickly become familiar with the Wi.Freestar module.

Features:
- Point-to-point and point-to-multipoint
- 4,000+ feet line of sight performance
- Integrated PCB Trace Antenna
- FCC, IC, and CE certified
- Direct Sequence Spread Spectrum
- CSMA-CA
- Flash-based/ upgradable
- 10 bit A/D (2 inputs)
- General Purpose I/O (8 ports)
- Windows- based Config and Test Tool
- Simple Serial UART Interface
- Over 65,000 network addresses

Kit Includes:
- 2x RF Modules
- 2x Interface Evaluation Boards
- 2x RS-232 Interface Cables
- 4x AA Batteries
- 1x CD
- Quick Start Guide

RK-WI.FS24-100ST

The RK-Wi.DP1203-XXX-RTM is a rapid-development/evaluation kit for the Wi.DP1203-XXX-R module.

Features:
- SPI style digital serial interface
- Simple FCC certification as a digital spread spectrum device
- 433/ 868/ 900 MHz
- 32 wideband and 84 narrow band channels
- TX current 62mA @ 14dBm typical
- RX Current 14mA typical
- Supports Frequency Hopping Wi.DP1203-915-R
- 1.2-152.34kb/sec RF data rate
- Maximum +15dBm output power
- Instant radio solution
- Transceiver only radio only device
- RX Sensitivity at Max data rate -103 dBm

Kits Include:
- 1x Development Case
- 1x Development Utility and Documentation CD
- 2x Development Boards
- 2x Wi.DP1203-XXX-EVM-RTM modules (pinned)
- 2x Antennas
- 2x RS-232 Cables
- 2x USB Cables
- 6x AAA Batteries
- Quick Start Guide

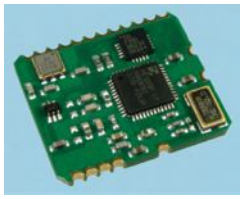
Wi.FREESTAR™ Module



The Wi.FREESTAR™ is a powerful long range 802.15.4, 2.4GHz Zigbee-ready 100mW embedded radio module in a miniature footprint. It is ideally suited for point-to-point/multipoint networks or in Zigbee ™mesh applications. This module is FCC, IC and CE certified for fast and simple integration into an end application. With two programmable output modes (10mW and 100mW) this radio meets worldwide regulatory requirements.

Features Include:
- 4,000+ feet line-of-sight performance
- Integrated PCB Trace Antenna
- Direct Sequence Spread Spectrum
- CSMA-CA
- Flash-based/ upgradable
- 10 bit A/D (2 inputs)
- General Purpose I/O (8 ports)
- MS Windows- Based Configuration and Test Tool
- Simple Serial UART Interface
- 65,000+ network addresses

Digital Embedded Modules

The Wi.232EUR-R embedded radio module is targeted for the European market. It combines a low power wireless transceiver with a powerful multipoint-to-multipoint protocol controller. This forms an easy transparent SERIAL UART wireless communication solution, interfacing to any host microcontroller capable of replacing wires in any RS-232/422/485 application. No special addressing or formatting of data is required. Multiple modules can operate on the same channel because of the built-in carrier-sense-multiple-access (CSMA) protocol.

Features:
- 16-bit CRC error checking
- 76.8kbit/sec maximum RF data rate
- 2 channels in Wideband mode
- 6 channels in Narrowband mode
- Low power standby and sleep modes
- PHY and MAC layer protocol built in
- CSMA medium access control
- 115dB link budget in Wideband mode
- 8 modes allow user to optimize power/range
- Command mode for volatile and nonvolatile configuration
- 48-bit unique address
- 5 volt tolerant I/O

All the Wi.DP120x modules supports wide band and narrow band communication. These modules are suitable for operation in the European Social alarm bands (25kHz channel spacing) and can meet European (ETSI EN300-220-1 and EN301 439-3) compliance standards.

- The Wi.DP1203-433-R module has +15dBm output power and sensitivity of -111dBm @ 2.4kb/s and will support data rates up to 152.34 kb/s
- The Wi.DP1203-868-R module has +15dBm output power and sensitivity of -113dBm @ 4.5kb/s and will support data rates up to 152.34 kb/s
- The Wi.DP1205 modules have +15dBm output power and sensitivity of -113dBm @ 4.5kb/s and will support data rates up to 304.7 kb/s

Wi.DP1203 / Wi.DP1205 Features:
- SPI style digital serial interface
- TX current 62mA @ 14dBm typical
- Simple FCC certification as a digital spread spectrum device
- 32 wideband and 84 narrow band channels
- RX Current 14mA typical
- Supports Frequency Hopping

MatchPort™ Embedded Wireless Device Server and Demo Kit

LANTRONIX

MP10010NMK-01

MP100x000G-01

MatchPort™ b/g enables the building of wireless networking into virtually any electronic device with a serial interface. With this full-featured, turnkey embedded device server module, products can be wirelessly accessed and controlled over the Internet. It enables future proofing of designs with a choice of flexible media-independent 802.11 b/g or Ethernet networking products.

Software is not supplied with the wireless devices server, but can be downloaded free directly from the Lantronix website.

Wireless Standards:	IEEE 802.11b; 802.11g
Frequency Range:	2.412 - 2.484 GHz
Output Power:	14dBm +2.0 dBm/-1.5 dBm (does not include antenna gain)
Maximum Receive Sensitivity:	-91dBm @ 1Mbps
Data Rates With Automatic Fallback:	54Mbps - 1Mbps
Range:	Up to 328 feet indoors
Modulation Techniques:	OFDM, DSSS, CCK, DQPSK, DBPSK, 64 QAM, 16 QAM

The MatchPort™ Demonstration Kit is designed to help successfully implement the pin-compatible MatchPort b/g embedded modules into a product design.

MatchPort Demonstration Kit Includes:
- MatchPort Demonstration Board
- RS-232 cable, DB9F, null modem
- CAT5e UTP RJ45M/M Ethernet cable
- Antenna

WiPort™ Embedded Wireless Networking Device Server

LANTRONIX

The matchbox sized WiPort integrated hardware and software network processor module enables wireless networking to be integrated into virtually any electronic device with serial or Ethernet capability.It is powered by a Lantronix DSTni Ethernet processor SoC, which includes a 10Base-T/100Base-TX MAC/PHY and 256 KB of on-chip SRAM, WiPort also includes a complete 802.11 b/g radio and 2MB of Flash memory for web page storage and system upgrades. WiPort connects through its coaxial pigtail" to an external panel-mounted antenna.
With WiPort products can be wirelessly accessed and controlled over a network or the Internet.

Features:
- Serial-to-Ethernet networking in the same form factor and pinout a wireless WiPort
- Provide a smooth transition to 802.11b/g wireless networking without any board redesign (using WiPort)
- Proven operating system, embedded web server complete network protocol stack
- 256-bit AES encryption for secure communications
- EMC/EMI-compliant

WiPort™ Embedded 10Base-T/100Base-TX Device Modules

LANTRONIX

Features:
- Two serial ports
- 10Base-T/100Base-TX Ethernet connectivity (using external RJ45 jack)
- 2MB of Flash memory for OEM web pages
- 11 GPIOs
- Available CAN, SPI and I2C interfaces
- PoE-capable with external circuitry
- Programmable e-mail alerts
- 256-bit AES Rijndael encryption for secure communications
- Extensive networking protocol including full TCP/IP stack

The matchbox-sized WiPort NR is a 10Base-T/100Base-TX version of the Embedded Wireless Networking Device Server. Both modules share the same form factor and pinout.

XPort Direct Embedded Device Gateway Module and Demo Kit

LANTRONIX

XD1001000-01

XD100100K-01

The compact XPort Direct Embedded Device Gateway module delivers network connectivity to virtually any electronic product with a serial interface on its host microcontroller. It offers network connectivity as a standard feature and enables a host of applications such as remote monitoring, networked control, data acquisition and Internet content streaming.The XPort Direct Demo Kit is designed to help implement XPort Direct into product design.

XPort Direct Embedded Device Gateway Module Features:
- Integrated module with RJ45 featuring dedicated networking SoC
- Complete TCP/IP protocol stack and Windows deployment software
- Up to 230 Kbps data rate
- Compact low profile
- 2 x 12 pin, 2 mm headers
- Two GPIO pins
- RS-232/RS-485 ready

XPort Direct Demo Kit Includes:
- XPort Direct Printed Circuit Board Assembly
- CD, XPort Direct (CD-XPD-01)
- Null Modem Cable DB9F to DB9F (6ft)
- CAT5 Ethernet Cable (10ft)

XPort® Embedded Ethernet Device Server

LANTRONIX

XPort is a compact, integrated solution to webenable any device with serial capability. XPort removes the complexity of designing network connectivity into a product by incorporating all of the required hardware and software inside a single embedded solution. Smaller than your thumb, it includes all essential networking features, including a 10Base- T/100Base-TX Ethernet connection, proven operating system, an embedded web server, e-mail alerts, a full TCP/IP protocol stack, and 256-bit AES encryption for secure communications (optional).

Features:
- Complete, integrated solution in an RJ45 form factor
- Embedded web server
- Stable, field proven TCP/IP protocol suite and web-based application framework
- EMI tested and compliant
- High-performance processor (12 MIPS at 48 MHz, 22 MIPS at 88 MHz)
- Password protection
- 3.3V power
- Serial-to-10/100 Ethernet conversion
- 921,600 baud serial
- 128, 192, or 256-bit AES Rijndael encryption (optional)

XPort® AR - Embedded Processor Module

The size of a few sugar cubes, XPort® Architect™(AR) is the first device server solution that goes beyond simple network connectivity to deliver an enterprise grade, programmable device computing and networking platform.
This Embedded Processor Module builds on our proven XPort serial-to-Ethernet/IP technology that enables device manufacturers to add Ethernet or IP connectivity as a standard feature to their products. The additional features above and beyond the original XPort, include:

- Evolution OS operating system
- Two full serial ports with all hardware handshaking signals or three serial portswithout handshaking signals
- 11 configurable pins
- Supports fully compliant Power Over Ethernet (PoE) designs by using PoE compliant magnetics and passing through both the used and unused pairs
- Increased memory: 4MB Flash and 1.25MB RAM
- Hardware capability in place to allow future software support for I2C Bus, SPI Bus, CAN Bus, USB, External interrupts, including one non-maskable, Timer input

Serial to Ethernet Device Servers

UD1100002-01

UD2100002-01

The UDS family of device servers enables users to connect, manage and control just about any piece of equipment with a serial port from virtually anywhere over Ethernet or the Internet. They are a quick, simple and inexpensive way to bring the advantages of remote management and control to equipment not currently connected to a network.

Features:

- Network virtually any device in minutes
- Access, monitor and control equipment over Ethernet
- Replace dedicated PCs and/or modem lines with fast and reliable Ethernet networking
- Configure quickly and easily via HTTP, DHCP, Telnet, serial or Lantronix DeviceInstaller™ utility
- Environmentally-friendly RoHS and WEEE compliant
- Features TruPort® Com port control technology

WiBox® Dual-Port Wireless Device Server

The WiBox® dual-port device server enable users to connect equipment to 802.11b/g wireless networks via serial or Ethernet, quickly and easily. By merging wireless communications and Lantronix device server technology, WiBox simplifies connectivity to devices in applications where mobility is required or cabling is impractical.

Features:

- Enables access to remote devices while minimizing costly cabling
- Provides network mobility for untethered communication
- Industry standard 802.11b/802.11g wireless interface
- Transparent communications - no need to develop special software
- Two DB9 DTE serial ports supporting RS-232, RS-422 or RS-485 communication
- Bulletproof wireless security with IEEE 802.11i-PSK,WPA-PSK, TKIP
- 256-bit AES - end-to-end encryption
- Ethernet or wireless communication
- Features TruPort ®Com port control technology

WiSpan™ Ethernet-to-Wireless Bridge

The WiSpan™ wireless bridge gives virtually any piece of electronic equipment with an Ethernet port industry-standard wireless 802.11 b/g connectivity quickly and easily. Its built-in IEEE 802.11i-compliant security ensures data privacy and integrity, and it features a rugged design and wide temperature range to easily handle harsh environments.

Features:

- Equips Ethernet-ready electronic equipment with 802.11 b/g wireless connectivity
- Enables remote monitoring and control of devices around the world
- Provides bulletproof wireless security with IEEE 802.11i-PSK, WPA-PSK, TKIP
- Ruggedized design and wide operating temperature range to withstand harsh environments
- FCC Class B, UL and EN EMC and safety-compliant

Digi Connect ME Family Wired / Wireless Embedded Modules & Kits

Connect ME Embedded Module

Connect Wi-ME Embedded Module

Connect ME/Wi-ME Jumpstart Kit

The industry's first interchangeable secure wired and wireless embedded modules with plug-and-play functionality and comprehensive development tools make it easy to add embedded web-enabled wired and wireless network connectivity.
Based on a unique common platform design approach, the Digi Connect® ME and Digi Connect® Wi-ME embedded modules offer complete 'drop-in' integration. This allows the user to build future-proof products based on a single design supporting secure wired 10/100Base-T and 802.11b wireless Ethernet connectivity. The family of Digi Connect® embedded modules makes all of this possible without the traditional complexities of hardware and software integration work, and at a fraction of the time and cost required to create custom solutions.

The Jumpstart kit provides Rapid application development for the Digi Connect ME or Digi Connect Wi-ME networking modules. Digi Connect Development Kits provide immediate and complete access to the resources and peripherals of a Digi Connect module. Each kit includes everything you need to complete your development, including a module, development baseboard, and hardware and software development tools.

Digi Connect ME Family Wired / Wireless Embedded Modules & Kits - continued

Network Interface:
Digi Connect ME:
- Standard: IEEE 802.3
- Physical Layer: 10/100Base-T
- Data rate: 10/100 Mbps (auto-sensing)
- Mode: Full or half duplex (auto-sensing)
- Connector: RJ-45
- 802.3af mid-span power pass-through

Digi Connect Wi-ME:
- Standard: IEEE 802.11b
- Frequency: 2.4 GHz
- Data rate: Up to 11 Mbps
- Modulation: CCK (11/5 Mbps),DQPSK (2 Mbps), DBPSK (1 Mbps)
- Transmit power: 16 dBm typical
- Receive sensitivity: -82 dBm @ 11 Mbps
- Antenna connector: 1 x RP-SMA

Hardware:
- 32-bit NET+ARM high-performance
- RISC processor (NS7520 @ 55 MHz)
- Digi Connect ME on-board memory
- 2 MB Flash and 8 MB RAM
- Digi Connect Wi-ME on-board memory
- 4 MB Flash and 8 MB RAM
- On-board power supervisor
- High-speed TTL serial interface
- Throughput up to 230 Kbps
- Full signal support for TXD, RXD, RTS, CTS, DTR, DSR and DCD
- Hardware/software flow control
- Five shared GPIO ports
- Wave-solderable design
- No clean flux process

Wireless Security:
- WEP (Wired Equivalent Privacy)
- 64/128-bit encryption (RC4)
- WPA/WPA2/802.11i
- 128-bit TKIP/CCMP encryption
- 802.1x EAP authentication

LEAP (WEP only), PEAP, TTLS, TLS, GTC, MD5, OTP, PAP, CHAP, MSCHAP, MSCHAPv2, TTLS-MSCHAPv2

Digi Connect EM Family Wired & Wireless Embedded Modules

Connect EM Board-Mount Embedded Module

Connect Wi-EM Board-Mount Embedded Module

Connect EM JumpStart Kit for NET+OS 7.x

The Digi Connect® EM and the Digi Connect® Wi-EM are the industry's first interchangeable secure embedded modules, delivering wired and wireless Ethernet networkconnectivity that is cost-effective and easy to implement.
Based on a unique common platform design approach, these embedded modules offer complete drop-in integration. This allows the user to build future-proof products based on a single design supporting secure 10/100Base-T wired and 802.11b wireless Ethernet connectivity.

The easy-to-use, cost-effective, and complete Digi JumpStart Kit for NET+OS delivers a royalty-free turnkey solution for embedded software development based on the ThreadX Real-Time Operating system (RTOS). This kit minimizes product design risks and dramatically shortens traditional time-to-market aspects of C-based embedded product development by providing all needed software and hardware components right out of the box.

Network Interface:
Digi Connect EM:
- Standard: IEEE 802.3
- Physical Layer: 10/100Base-T
- Data rate: 10/100 Mbps (auto-sensing)
- Mode: Full or half duplex (auto-sensing)
- Connector: RJ-45

Digi Connect Wi-EM:
- Standard: IEEE 802.11b
- Frequency: 2.4 GHz
- Data rate: Up to 11 Mbps w/ auto talk back
- Modulation: CCK (11/5 Mbps), DQPSK (2 Mbps), DBPSK (1 Mbps)
- Transmit power: 16 dBm typical
- Receive sensitivity: -82 dBm @ 11 Mbps
- Antenna connector: 2 x RP-SMA

Hardware:
- 32-bit NET+ARM high-performance
-RISC processor (NS7520 @ 55 MHz)
- On-board memory 4 MB Flash and 8 MB RAM
- On-board power supervisor
- Two high-speed TTL serial interfaces
- Throughput up to 230 Kbps
- Full signal support for TXD, RXD,RTS, CTS, DTR, DSR and DCD on port 1
- TXD / RXD signals on port 2
- Hardware/software flow control
- Serial Peripheral Interface (SPI)
- Nine shared General Purpose
- Input/Output (GPIO) ports
- Wave-solderable design
- No clean flux process

Wireless Security:
- WEP (Wired Equivalent Privacy)
- 64/128-bit encryption (RC4)
- WPA/WPA2/802.11i

DIGI Connect ME Wire/Wireless Modules & Development Tools

The industry's first interchangeable secure wired/wireless embedded modules with plug-and-play functionality supported by development tools for custom applications, making it easy to add embedded web-enabled wired and wireless network connectivity. A common platform design approach enables the Digi Connect® ME and Digi Connect® Wi-ME embedded modules to offer complete "drop-in" integration. This supports building of future-proof products on a single layout design by simply selecting between 10/100 Mbit Ethernet or 802.11b WLAN with WPA2/802.11i.

- 32-bit Net + ARM High Performance Processor
- Family of interchangeable and pin-compatible solutions
- 2/4 MB Flash and 8MB RAM
- High-speed TTL serial interface with up to 230 kbps throughput
- 5 shared GPIO port options
- Fully pre-certified radio reduces overall design cost/risk and time-to-market
- Industrial operating temp and FCC Class B low-emission design
- NIST-certified 256-bit AES encryption based on SSL/TLS
- Strong, standards-based wired and wireless security out-of-the-box

Drop-in Networking Starter Kit

ZNet 2.5

Drop-in Networking solutions provide end-to-end wireless connectivity to electronic devices in locations where wired infrastructure does not exist or satisfy customer needs. This Drop-in Networking Starter Kit demonstrates how Drop-in Networking technology can be used to better manage geographically distributed assets, enhance customer service, and even develop alternative sources of service-based revenue.

Features:
- Reduced-cost kit allows quick configuration of a low-power WPAN network
- Includes programmable XBee modules and device adapters, ConnectPort X gateway and Watchport/T temperature sensor
- Python programming tools included for custom application development

Rabbit RCM 3000 / 4000 Series Development Kits

New

Development Kit for the RCM3750

Jumpstart your evaluation and design efforts with a complete development kit, which includes a microprocessor core module, development board with prototyping area, Dynamic C development system and complete documentation on CD-ROM, serial cable for programming and debugging, and Getting Started manual.

Rabbit 3000 Series Development Kits:

RCM3000 Development Kit includes:
- RCM3010 RabbitCore Module
- Prototyping Board
- Serial cable for programming and debugging
- Dynamic C® integrated development software
- Getting Started Instructions
- Complete product documentation on CD including the Rabbit 3000 reference manual
- Rabbit 3000 pin specifications poster

RCM3100 Development Kit includes:
- RCM3100 RabbitCore Module
- Prototyping Board
- Serial cable for programming and debugging
- Dynamic C® integrated development software
- Getting Started Instructions
- Complete product documentation on CD including the Rabbit 3000 reference manual
- Rabbit 3000 pin specifications poster

RCM3200 Development Kit includes:
- RCM3200 RabbitCore
- Getting Started manual
- Prototyping board
- Serial Cable for Programming and debugging
- Dynamic C SE software development system (not a trial version) and complete documentation on CD-ROM.

RCM3305 Development Kit includes:
- RCM3305 RabbitCore
- Dynamic C® with royalty-free TCP/IP stack and source
- Prototyping Board
- Getting Started Instructions
- Serial cable for programming and debugging
- Complete product documentation on CD

RCM3400 Development Kit includes:
- RCM3400 RabbitCore (512K Flash/512K SRAM)
- Development board with 10/100Base-T Ethernet and prototyping area
- Dynamic C SE development system (not a trial version) and complete documentation on CD-ROM
- Serial cable for programming and debugging
- Getting Started manual

RCM3600 Development Kit includes:
- RCM3600 RabbitCore (512K Flash/512K SRAM)
- Development board with prototyping area
- Dynamic C development system (not a trial version) and complete documentation
- Serial cable for programming and debugging
- Getting Started manual

RCM3700 Development Kit includes:
- RCM3700 RabbitCore
- Development board with prototyping area
- Dynamic C development system (not a trial version)
- Complete documentation on CD-ROM
- Serial cable for programming and debugging
- Getting Started manual

RCM3750 Development Kit includes (image shown):
- RCM3750 RabbitCore
- Development board with prototyping area
- Dynamic C development system (not a trial version) and complete documentation on CD-ROM
- Serial cable for programming and debugging
- Getting Started manual

Rabbit 4000 Series Development Kits:

RCM4000 and RCM4010 Development Kits includes:
- RCM4000 or RCM4010 RabbitCore Module
- Prototyping Board
- Serial cable for programming and debugging
- Dynamic C® integrated development software
- Getting Started Instructions
- Complete product documentation on CD including the Rabbit 4000 reference manual
- Rabbit 4000 pin specifications poster
- Connectors and accessories

RCM4110 Development Kits includes:
- RCM4110 microprocessor core module
- Development board with prototyping area
- Dynamic C 10 development system and complete documentation on CD-ROM
- Derial cable for programming and debugging
- Getting Started manual

RCM4300 Development Kit includes:
- RCM4300 core module
- MiniSD card
- Prototyping board
- Accessories and development tools to get you up and running quickly.
- Dynamic C integrated development software

RCM4400W Development Kit includes:
- RCM4000 microprocessor core module
- Development board with prototyping area
- Dynamic C 10 development system and complete documentation on CD-ROM
- Serial cable for programming and debugging
- Getting Started manual

RCM4510W Development Kit includes:
- RCM4510W ZigBee core module
- Development board with prototyping area
- Dynamic C 10 development system and complete documentation on CD-ROM
- Serial cable for programming and debugging
- Getting Started manual

RCM 3000 / 4000 Series Core Modules

Rabbit 3000 Series Core Modules:
Featuring the "low-EMI" Rabbit 3000 microprocessor, this range of core modules mount on a user designed motherboard and act as the controlling microprocessor for the system. Small in size but packed with powerful features these core modules give designers a complete package for control and communication.

Communications - Embedded Connectivity - continued

2000/3000A/4000 Microprocessors

RABBIT Semiconductor

New

The Rabbit 2000 is a 8-bit microprocessor designed expressly to power embedded systems. Its extensive integrated feature set and glueless architecture facilitate rapid hardware design, and its C-friendly instruction set permits efficient development of complex applications.

The Rabbit 3000 is a low-EMI microprocessor designed specifically for embedded control, communications, and Ethernet connectivity. It has 6 serial ports with IrDA, quadrature decoder, PWM outputs, and pulse capture and measurement capabilities. It also features a battery-backable real-time clock, glueless memory, I/O interfacing, and ultra-low power modes. 4 levels of interrupt priority allow fast response to real-time events.

The Rabbit 4000 is a high-performance, low-EMI microprocessor designed specifically for embedded control, communications and Ethernet connectivity. It outperforms most 16-bit processors without losing the efficiency of an 8-bit architecture. Extensive integrated features, glueless architecture and 10Base-T Ethernet facilitate rapid hardware design, while a new C-friendly instruction set promotes efficient development of even the most complex applications.

MiniCore™ RCM5700 Module & Standard Development Kit

RABBIT Semiconductor

New

The MiniCore RCM5700 module packs a rich embedded feature set on an ultra-compact mini PCI Express form factor. As an added benefit the MiniCore RCM5700 offers the lowest profile of any embedded solution. At only 5cm in height, the RCM5700 delivers unprecedented flexibility to place network connectivity anywhere onto a customer-designed mother board.

The standard development kit has the essentials needed to design a microprocessor-based system, and includes a complete Dynamic C software development system. The RCM5700 development kit also contains a development board that will allow evaluation of the RCM5700. Digital I/O and serial accessory boards will help to illustrate the RCM5700 features by running the sample programs included with Dynamic C. You will also be able to write and test software for the RCM5700 modules, including Ethernet or TCP/IP applications.

RCM4110 RabbitCore Development Kit

RABBIT Semiconductor

New

The RCM4110 core module is a compact, powerful control device for embedded applications that require I/O control, data handling, and peripheral connectivity.
It is well suited for easy integration with peripheral technologies such as GPS, cellular modems, RFID readers & sensors. A security-key feature with tamper detect and encryption capabilities adds peace of mind for OEM's and system integrators.

RIO™ Programmable I/O Chip & Development Kit

RABBIT Semiconductor

New

The RIO chip is a programmable I/O chip compatible with any processor with an available clocked serial port. It features eight independent channels each with 4 ports which can be configured to several different modes. It can be used to add up to 38 I/O lines to an existing design and adds functionality without the complexity and cost of a processor change.

Clock Speed: Up to 40 MHz
Operating Voltage: 3.0 - 3.6 V DC
Core Current: 22.1184 MHz, @ 31.3 mA, 25°C
I/O Ring: 22.1184 MHz, @ 1.1 mA, 25°C
Output Drive: 8 mA
Communication Interfaces: SPI, 8-bit parallel, RabbitNet
Fixed Digital Inputs: 4

The RIO is also supported by the Programmable I/O Kit intended to demonstrate how to expand an embedded system design by adding additional I/O and other features. The Kit provides a Prototyping Board with a Rabbit RIO already installed and configurable header locations to allow users to develop their own applications

Communications - Bluetooth

WT32 Bluetooth Audio Module & Evaluation Kit

blue giga

New

WT32 is the latest generation of Bluetooth modules. It provides highest level of integration with

Module Features:

- Plug n Play Bluetooth Audio Solution for Mono and Stereo Applications
- Integrated DSP, Stereo Codec and Battery Charger
- Chip Antenna or W.FL Connector
- Bluetooth 2.1+EDR Compliant
- Bluetooth End Product, CE, IC and FCC Qualified
- Class 2 - Range up to 30 Metres
- Industrial Temperature Range from -40°C to +85°C
- Based on CSR BC05 chipset
- Low Power Consumption
- iWRAP™ Firmware for Controlling Connections and Configuring Settings
- Supported Bluetooth Profiles: A2DP, AVRCP, HFP (v.1.5), SPP, OPP and HID

integrated 2.4GHz radio, DSP, battery charger, stereo codec and antenna ready to hit mono and stereo audio applications. WT32 is also fully ready to support the latest 2.1 + EDR standard.
The EBWT32-A is an evaluation board for the WT32 Bluetooth module. It includes a stereo headset, onboard installation kit andUSB Serial cable.

WT11 Bluetooth Module & Evaluation Kit

bluegiga

New

WT11 is a next-generation, class 1, Bluetooth 2.0 + EDR module. It introduces three times faster data rates compared to the existing Bluetooth 1.2 modules even with a lower power consumption. It contains all the necessary elements from Bluetooth radio antenna to a fully implemented protocol stack. It is ideal for developers wanting to integrate Bluetooth wireless technology into their designs with limited knowledge of Bluetooth and RF technologies.

Module Features:
- Bluetooth Class 1
- Enhanced Data Rates with data throughput up to 2-3Mbps
- Support for Adaptive Frequency Hopping (AFH) and 802.11 co-existence
- USB version 2.0
- UART with bypass mode
- 8Mbits of flash memory
- Supported profiles: SPP, HFP, OBEX OPP, DUN, HCI, HID
- Industrial temperature range from -40°C to +85°C
- Simple iWRAP™ firmware for controlling Bluetooth wireless technology
- Fully qualified end product with Bluetooth 2.0 + EDR, CE, FCC and IC

The EBWT11-A Evaluation Board is ideal for evaluation the range and performance features of the WT11 Bluetooth Module. It can also be used as as an additional board. This WT11 kit includes 1x WT11 Evaluation Board, 1x Power Adapter and 1x Serial Cable.

WT12 Bluetooth Module & Evaluation Kit

bluegiga

New

WT12 is Class 2, Bluetooth 2.0+ EDR module. It introduces three times faster data rates compared to existing Bluetooth 1.2 modules even with lower power consumption. WT12 is a highly integrated Bluetooth module, containing all the necessary elements from Bluetooth radio to antenna, a fully implemented protocol stack, and full certifications.

Module Features:
- Bluetooth Class 2
- Enhanced Data Rates (EDR) with data throughput up to 2-3Mbps
- Support for Adaptive Frequency Hopping (AFH) and 802.11 co-existence
- USB version 2.0
- UART with bypass mode
- 8Mb of flash memory
- Supported Bluetooth profiles: SPP, HFP, HFP-AG, OBEX OPP and DUN, + HCI
- Support for on-board applications
- Industrial temperature range from -40°C to +85°C
- Based on CSR BC04 chipset
- Pin-to-pin compatible with Bluegiga WT11 module
- Simple iWRAP™ firmware for controlling Bluetooth wireless technology
- Fully qualified end product with Bluetooth 2.0+ EDR, CE, FCC and IC

The EBWT12-A is a single WT12-A evaluation board which can be used for initial evaluation or as an additional board. The Kit includes 1x WT12 Evaluation board, 1x Power Adapter & 1x Serial cable.

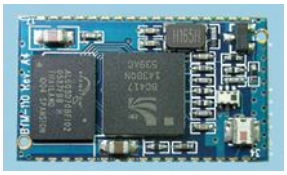
2293 Access Server

bluegiga

New

The WRAP Access Server™ is a cutting edge wireless Bluetooth router. It supports multiple communication standards including Ethernet, WiFi, and GSM/GPRS enabling full media-independent TCP/IP connectivity. It is easy to deploy and manage in existing wired and wireless networks without compromising speed or security. For very fast deployment, configurations can easily be copied from one device to another using USB memory dongles.



Features:
- Bluetooth Networking
- 21 simultaneous Bluetooth Connections
- Bluetooth, CE and FCC certified
- Acts as a transparent router or bridge
- DHCP Support for plug-and-play installation
- Ethernet, Bluetooth
- USB, RS232 and GPIO
- Incorporates packet filtering firewall
- Fast and easy to install
- All relevant Bluetooth profiles and API's supported
- 100 meter range / Software configurable for support 10 metre range
- Uncompromised security: SSH, Firewall and 128 bit Bluetooth encryption
- Offers an open platform for adding local applications

RS232 Bluetooth Serial Adapter & 500 Metre Antenna

LM TECHNOLOGIES

New

The Bluetooth Serial Adapter eliminates conventional RS232 serial cables, providing an easy to use, invisible connection with superior freedom of movement. This tiny adapter allows any device with a standard 9-pin Serial port to communicate wirelessly. You can communicate with another Bluetooth serial adapter or other Bluetooth enabled devices such as a laptop computer, PDA or mobile phone.
Three options for power are available, either via USB connection, mains adapter or Pin 9 of the D SUB 9 pin serial connection.
The LM057 extends the range of the LM058 from 100 Metres to 500 Metres by boosting the wireless signal. These units come packed with extension cable, main aerial and packagedin a white box.

Mini RS232 Bluetooth Serial Adapter

LM TECHNOLOGIES

New

The LM048 is the worlds smallest Bluetooth Serial RS232 Adapter with a comprehensive range of firmware commands. Using a EDR V2.0 Class 1 Bluetooth chipset as standard these units have a range of up to 100m with a transfer rate of up to 3Mbps.
It has three LED status lights that indicate: Power on, Data transfer status and Bluetooth connection status. The mini USB port can be used to power the unit from either USB to USB or Mains to mini USB.

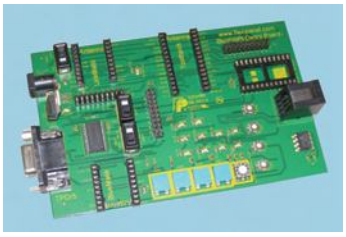
Bluetooth to RS232 Module



LinkMatik is a fully transparent serial to Bluetooth data link. It enables system designers to easily add a Bluetooth wireless to their products without the need for RF and antenna design expertise.
The module contains all RF circuitry, including integral antenna and baseband controller, and provides a simple-to-use, plug-in module with serial interface to the host application.
The module can interface with many standard Bluetooth devices, e.g. Laptop computers, PDAs, Mobile phones etc.
Operating in slave mode, it initializes itself and waits for a remote device to connect. Operating in master mode, it looks for specific devices to connect to.
For cable replacement applications, a slave and a master are paired together. The modules manage themselves and require no external control. Baud rate, device name, class of device, etc, can be reconfigured from a PC via the serial port.
The modules are supplied in DIN Rail Housings suitable for direct mounting onto DIN Rails.

- Easy-to-use serial data interface
- Class I Bluetooth V2.0 radio, 100m range
- 5-24V DC supply
- DIN rail mounting clip
- Serial baud rates 9600 to 115K baud
- Over-the-air data rate approx 50K full duplex
- Connects with Bluetooth devices (e.g. PDA's, PC's, Phones) as master or slave
- For cable replacement applications, two LinkMatik-232s can pair permanently together one as master, the other as slave
- FCC / CE compliant. Does not need recertification if integral antenna used
- Hardware flow control or no flow control
- Bluetooth PIN code and encryption
- Bluetooth error correction layer
- Integral antenna

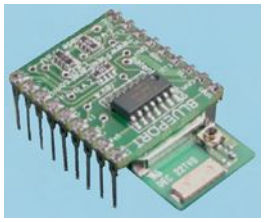
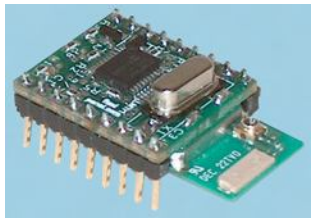
Bluetooth Demo Board

An Eval board designed to allow the developer to follow the tutorials and examples in the product data sheets. Additionally, the demo board can be used during development as a reliable, tested environment while troubleshooting. Bluetooth modules available separately.



The Bluetooth Demo Board is designed to evaluate the following Bluetooth products:



- Enable tutorials in the products data sheets
- RS232 serial port and TTL to RS232 converter
- Toothpick ICD2 programming socket
- Toothpick
- LinkMatik
- BlueMatik

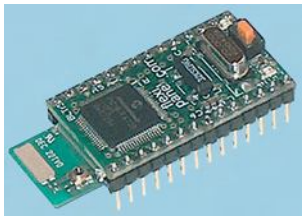
Bluetooth Radio Modules

These modules are fully transparent serial to Bluetooth data links. They enable designers to easily add a Bluetooth wireless feature to their product without the need for RF and Antenna design expertise.
The modules contain all RF circuitry including integral antenna and controller providing a simple-to-use, plug-in module with digital interface to the host application.

Linkmatik and Bluematik



- Easy to use Serial data interface TX / RX or no AT commands
- Pairs with Bluetooth devices (e.g. PDA's, PC's, Phones) as master or slave
- Maximum data rate approx 50K full duplex
- FCC / CE / IC compliant. Does not need recertification if integral antenna used
- Baud rates 1200 to 115K baud
- Hardware flow control or no flow control
- Bluetooth PIN code and encryption
- Bluetooth error correction layer
- Class I Bluetooth radio, 100m range
- 3-5V supply
- Integral antenna
- Direct access to PDA's, Laptops, Mobile Phones
- Enables Bluetooth device control

Bluematik
Uses AT Commands to interface.
Linkmatik
Standard serial data, (no AT commands).

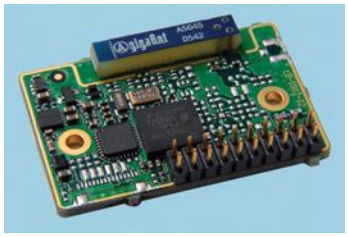
ToothPIC Bluetooth Radio Module

ToothPIC is a PIC18LF6720 PIC microcontroller and BlueMatik radio combination, preloaded with ToothPIC services firmware user interface server, wireless field programming and ToothPIC Slave for optional external host control.

- Pairs with Bluetooth devices (eg PDA's, PC's, Phone)s as master or slave
- FCC/CE/IC compliant. Does not need re-certification if integral antenna used
- Integral antenna
- 128Kbyte Flash, 3.5K RAM, 1K Eprom up to 512Kbyte I2C external memory
- 12 x 10-bit A to D converter
- 5 x 10-bit PWM outputs
- Serial UART, I2C and SPI communications
- 2 interrupts
- 20MHz and 32KHz oscillators
- Low dropout 400mA power regulator
- 45 x 22mm through-hole mount, suitable for breadboards

Operating Modes
Pre-tested Firmware Solutions ready for immediate standalone operation:



- OpenToothTM Bluetooth device sensor
- DARC-ITM Data acquisition and remote control managed via Bluetooth
- DARC-IITM Data acquisition and remote control with FlexiPanel User Interface
- ToothPIC Slave where ToothPIC is controlled by a host processor via a serial link.
- Standalone ToothPIC programmable in C for low-cost, customized standalone operation

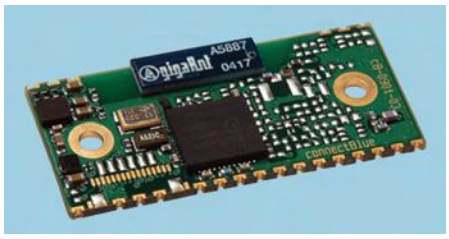
Bluetooth Serial Port Adaptor

connectBlue
- your complete Bluetooth provider

The OEM SERIAL PORT ADAPTER™ 312/332 series is a complete set of different Bluetooth modules specially designed to make migration from prior connectBlue Bluetooth generations an easy task.
Small in size yet powerfull, ConnectBlue's modules are ideal for industrial applications.
Based in Sweden where Bluetooth was born, ConnectBlue have extensive experience of all the requirements needed to

supply the market with cost-effective and time-saving Bluetooth solutions, they are able to support customers worldwide.



- Electrical and mechanical compatible with OEMSPA13/33
- Compatible Short Range and Long Range modules
- RS232 and UART logic-level support
- Designed for high performance/throughput
- Configurable for short latency/delay
- AT Command support
- Wireless LAN co-existence support
- Configuration over Bluetooth
- Bluetooth Qualified as Product (Bluetooth version 2.0)
- Radio Type Approved for Europe, US and Canada
- Compliant with EMC, Safety and Medical standards
- Only high quality components used
- Internal antenna or external antenna connector
- Different connector and mounting options
- Industrial and Automotive temperature range -30 - +85°C
- Individually tested and tuned in production
- Custom factory configuration possible

Bluetooth Module Starter Kit

connectBlue - your complete Bluetooth provider

The OEMSPA Complete Kit connected to a PC is the fastest way to get familiar and start integration of the connectBlue Bluetooth modules. The Complete Kit includes Module Adapter, Bluetooth Module (version 2.0), Power cable, RS232 cable, documentation and Configuration software for PC (Wizard).
connectBlue offers a wide range of Bluetooth modules. The kit includes the module cB-OEMSPA311i-04, which is a short range module with integrated, PCB mounted antenna. Other module versions may be ordered separately.
The included Configuration Wizard for PC is an easy to use tool for configuration of the module and start development of Bluetooth applications.
The AT commands supported by the module may also be tested using a standard Hyper Terminal on PC. In addition the kit may be used for firmware upgrades of the Bluetooth module.

- RS232 interface
- 5 VDC power interface
- LED for module status
- cB-OEMSPA311i-04 - Short range BlueTooth module with internal antenna
- UART interface
- USB cable for power included
- Configuration software (PC) included

Bluetooth Access Control

An access security system automatically operated by users mobile phone's Bluetooth. Automatically detects known bluetooth devices within a 10M range. If a recognised device is detected, it energises its relay.
Model: BLUELOCK

- Door lock/access control
- Automated system control eg. lighting, controlled area
- Invisible remote control activates automatically in the presence of the mobile phone
- Up to 128 Bluetooth device ID's may be stored
- FCC/CE/IC certified Class II Bluetooth V1.1 radio, 10m range
- Integral antenna
- External push button release connection
- 12V DC supply (not supplied)

Max Operating Temperature	-20 to 75°C
Dimensions (WxHxD)	85 x 110 x 35mm
Supply Voltage (Unregulated)	12V
Typ. Current, no remote device connected	10mA
Typ. Current, remote devices connected	40mA
Additional Current per Energized Relay	55mA
Max. RF Power Output	Class 1 = 100mW = +20dBm
RF Frequency Range	2402 MHz to 2480 MHz
RF Channels	79
Frequency Hopping	1600Hz
Range	100 m Nominal

Embedded Bluetooth Module

Laird TECHNOLOGIES

The Embedded Bluetooth Module is specifically designed for embedded applications that need a robust Bluetooth link. It has been designed to cope with rugged applications utilising a direct solder connection that allows the main electronics section to be potted or enclosed within a metal housing, exposing a high performance multilayer ceramic antenna. The UART interface allows the module to be connected to any serial port. As well as a fully approved Bluetooth protocol stack, the module includes a comprehensive AT style interface. It is based on CSR's latest BlueCore BC04 chipset, giving access to the features of the new Bluetooth Version 2.0 specification.

Development Board
for Bluetooth or Wireless LAN Modules

The development board allows the Bluetooth or Wireless LAN Module to be connected to a PC. The development board provides RS-232 level conversion through a standard 9 way D type connector to all pins of the 40 way and a 50 way Hirose connecters used by Bluetooth or Wireless LAN interface. A separate connector is provided for PCM audio for use with the 40 way Bluetooth modules.

Features:
- Plated through connections to access every pin of either module
- Choice of power options: pin 9 RS232, USB through supplied cable, an external 5v power supply
- Built in RS232 Level shifter
- EZURiO terminal PC software
- Jumper link for current measurement
- Access to all 40 and 50 way module pins via through plated header holes
- Dedicated PCM port for quick audio application development (Bluetooth only)
- On board power regulation

High Speed Bluetooth USB Adapter

The Bluetooth USB adapter is designed with the most advanced Bluetooth features in a product that has been engineered to ensure the highest quality and reliability. This is a professional product intended for system critical use where robustness and reliability are critical. The USB adaptor has been designed to ensure wireless applications work just as well in real world deployment locations as in the controlled environment of an engineering lab.

Features:
- Over 300 metres open field connectivity
- Adaptive Frequency hopping to cope with interference from other wireless products
- Automatic high speed performance using the Enhanced Data Rate of Bluetooth Version 2.0+EDR specification with data rate up to 3Mbps
- Supports extended SCO to provide the highest quality voice communications
- Low power
- Temperature range of -40°C to +85°C

BHCRS02BI

BISPC01BI

TRBLU24-00100/200

BTM402

- BHCRS02BI Bluetooth® RS232 Adapter

The RS232 Adapter allows any device with a standard DB9 RS232 to upgrade to Bluetooth wireless connectivity. Combined with the AT style interface this brings versatile adaptation to cable replacement within easy reach. This product has been designed as a true industrial adapter, with an exceptional range of up to 250 metres ensuring a reliable and robust connection regardless of the environment, thus allowing connection to any other Bluetooth device using the same profile. The Bluetooth RS232 Adapter can be used as a direct cable replacement in any application utilising an RS232 port.

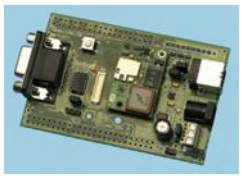
- BISPC01BI Bluetooth™ PC Card with embedded stack

The blu2i Bluetooth PC Card is designed for users who want the functionality of a Bluetooth PC Card, but without the need or ability to run a host Windows Bluetooth stack on their system. The blu2i Bluetooth PC Card is unique in providing a complete Bluetooth stack embedded within the card, appearing as a Serial Port to the host system.

- TRBLU24-00100/200 Embedded Bluetooth® HCI Module

These modules are Class 1 industrial surface mount Bluetooth V2.0 module with Enhanced Data Rates - 2.1Mbps. The module are rugged, low profile design, low power consumption and with a range exceeding 300 meters. The UART supports HCI/USB, H4, H5 and BCSP protocols and has fully embedded Bluetooth drivers. Also the modules Supports extended SCO for enhanced audio applications. The modules are fully end approved product and lead free with 2 year warranty.

- BTM402 Bluetooth Module with Power Amplifier



This is a leading high power Bluetooth module with line of sight range exceeding 1000 meters. It has simple AT command interface, fully embedded Bluetooth drivers, 9 configurable GPIO and 2 analogue lines for event and condition monitoring. The 300 kbps data rate makes it suitable for voice applications. The modules are fully end approved product and lead free with 2 year warranty.

Bluetooth Development Kit

The Bluetooth Development Kit is designed to plug into a host motherboard for evaluation purposes or small production runs, it can then be transferred into full volume production with the minimum of design requirements avoiding any lengthy design cycles and lowering design costs.

Features
- 2 point-to-multipoint USB Bluetooth modules for both ends of the wireless communications
- Bluetooth specification 1.1 compliant for the latest released features and compatibility
- Rich set of APIs for maximum development flexibility
- Intelligently designed APIs for concise interfaces
- Sample applications for quick start-up
- Trace utility for configurable, real-time monitoring of all stack layers
- Complete and comprehensive documentation for quick and easy reference
- Simple, intuitive programmer interface

Bluetooth/ISM 2.4GHz Front-End IC

The T7024 is a monolithic SiGe Transmit/Receive Front-End IC with Power Amplifier, low noise Amp and T/R Switch driver, especially designed for operation in TDMA systems like Bluetooth and WDCT.

Features:
- Single 3V supply
- High power-added efficiency power amplifier (Pout typ 23dBm)
- Ramp-controlled output power
- Low noise pre-amp (NF typ 2.1dB)
- Biasing for external PIN diode T/R switch
- Current-sensing standby mode
- Few external components required
- 20-pin SSOP package

ZigBee/802.15.4 Application Kit

New

The ZigBee/802.15.4 Application Kit combines MaxStream's XBee RF modem with RCM3720 RabbitCore module along with an easy-to-use interface to help the user build a practical ZigBee wireless control network. The kit contains three Digi® ZigBee modules for full application reference. One ZigBee module is connected to an Ethernet enabled RCM3720 RabbitCore Module. The RCM3720 runs at 22.1 MHz, and provides 10Base-T Ethernet, 512K Flash, 256K SRAM, 1MB Serial Flash as on-board memory, and 33 GPIO lines. The other two ZigBee modules are standalone node devices.

CC1000 Development Kits

The CC1000DK Development Kits are easy Plug-in, Power-ON and Communicate kits that allows for evaluation of the CC1000 technology by turning it on and starting the SmartRF® Studio. Advanced antenna solutions can be connected and customised application software be applied. Engineers can base designs on the development kit diagrams and the available reference designs.
The CC1000DK is available in two versions, either with VCO inductor and matching network optimised for 433 MHz or 868/915 MHz. The 868/915 MHz version is equipped with a 868 MHz SAW filter, which is replaceable with one covering 915 MHz. The LC filter output can be used at both frequencies.

Features:
- RF power up to 10mW (10dBm) programmable in 1dB steps
- -107 dBm sensitivity for 10-3 bit error rate
- Logic level data input/output (Manchester coded or NRZ)
- Logic level synchronisation clock output
- RSSI output
- 10.7 MHz IF output
- Selectable RF filtering (SAW or LC)
- All set-up controlled by PC
- Selectable 3 V or 4-10 V unregulated voltage supply inputs

Kits Include:
- 2x CC1000PP Plug & Play module
- 5x CC1000 RF Transceiver
- Antennas
- PC cables
- Connectors
- Documentation

CC1010 Development Kit

CC1010EB Evaluation Board with CC1010EM plugged in

These CC1010DK Development Kits allow for evaluation of the RF performance of the CC1010, assists through the design cycle, software development and to build a prototype for an application. The kits are available in two versions, 433 MHz & 868/915 MHz.
The CC1010EM contains the CC1010 chip and associated support circuits and can operate as a stand-alone component.
The CC1010EB acts as a motherboard for the CC1010EM Evaluation Modules, provides two serial ports, a parallel interface, buttons, LEDs, a voltage regulator, configuration jumpers and connectors to interface the CC1010 with Chipcon's Integrated Development Environment (IDE), SmartRF® Studio and various test equipment.

Kits Include:

- 1x Evaluation Board (CC1010EB)
- 2x Evaluation Module (CC1010EM)
- 1x Quick Start instruction
- 2x SMA Male Antennas
- 3x SMA to BNC adapters

CC1020/1070 Development Kit

The CC1020/1070DK Development Kit evaluates the CC1020 and CC1070 technology. Simply power on the boards and start the SmartRF® Studio. It allows for more advanced antenna solutions to be connected and software to be applied. Designs can be based on the development kit diagrams and the reference designs available.
The kit includes 2 CC1020EB evaluation boards, 2 CC1020EM and a CC1070EM evaluation modules. The CC1020EM includes the CC1020 transceiver chip and the CC1070EM includes the CC1070 transmitter chip, both with the necessary external components for operation. The evaluation modules are mounted onto the CC1020EB, ready equipped with a voltage regulator and a PC interface circuitry. With the CC1020EB connected to a PC running the SmartRF® Studio software, the CC1020 and CC1070 system parameters can be changed and tested.
The CC1020/1070DK is available in two versions, optimised either for 433 MHz or 868 MHz.

Features:
CC1020:

- RF output power up to 10/5 dBm programmable in 1dB steps at 433/868 MHz respectively
- High sensitivity (up to -121dBm for a 12.5kHz channel)
- Low Adjacent Channel Power (ACP)
- High Adjacent Channel Rejection (ACR)
- Integrated bit synchronizer
- Image rejection mixer
- Automatic Frequency Control which reduces the crystal accuracy requirement
- Digital RSSI and carrier sense indicator

CC1070:

- RF output power up to 10/8 dBm programmable in 1dB steps at 433/868 MHz respectively
- Low Adjacent Channel Power (ACP)

System-on-Chip Sub-1GHz RF Transceivers

with MCU, Memory and USB Controller

New

The CC1110Fx/CC1111Fx is a true low-power sub-1 GHz system-on-chip designed for low power wireless applications. They combines the excellent performance of the state-of-the-art RF transceiver CC1101 with an industry-standard enhanced 8051 MCU, up to 32 kB of in-system programmable flash memory and up to 4 kB of RAM, and many other powerful features.
The CC1111Fx adds a full-speed USB 2.0 interface to the feature set of the CC1110Fx. Interfacing to a PC using the USB interface is quick and easy, and the high data rate (12 Mbps) of the USB interface avoids the bottlenecks of RS-232 or low-speed USB interfaces.

CC2400 Development Kits

The **CC2400DK** development kit is a powerful and flexible tool specifically designed to make it easy for the user to evaluate the RF performance of the CC2400 and to minimize the time spent on evaluation.
The Development Kit includes two evaluation boards and two evaluation modules. The evaluation modules contain the CC2400 chip and required external components. The evaluation board serves as a motherboard for the evaluation modules. The evaluation board provides a USB port, a serial port, buttons, LEDs, voltage regulator, configuration jumpers and connectors to make it easy to interface the CC2400 with the SmartRF® Studio software and various test equipment.

CC2400DK Includes:

- 2 Evaluation Boards (CC2400EB)
- 2 Evaluation Modules (CC2400EM)
- 1 Quick Start instructions
- 2 Antennas
- 4 SMA to BNC adapters
- 2 USB cables
- 1 CC2400 sample kit

The **CC2400EMK** evaluation kit in combination with a CC2400 development kit is a powerful and flexible tool specifically designed to make it easy for the user to evaluate the RF performance of the CC2400 and to minimize the time spent on evaluation.
This evaluation kit includes two CC2400EM modules and antennas. The CC2400EM are add-on daughter boards that require a CC2400DK or CC2400DBK development kit for evaluation and development purposes.

CC2400EMK Includes:

- 2 CC2400 Evaluation Modules
- 2 Antennas

CC2420 Development Kits

The **CC2420DK** development kit is a powerful and flexible tool specifically designed to make it easy for the user to evaluate the RF performance of the CC2420 and to minimize the time spent on evaluation.

CC2420DK Kit includes:

- 2x CC2400EB Evaluation Boards
- 2x CC2420EM Evaluation Modules

The **CC2420DBK** demonstration kit is a complement to the development kit as the hardware is representative of an actual application, and it is well suited as a prototyping platform for application code.

CC2420DBK Kit includes:

- 2x CC2420DB Demonstration Boards
- Connectors where all of the internal signals on the PCB are available

The **CC2420EMK** evaluation kit in combination with a CC2420 development kit is a powerful and flexible tool specifically designed to make it easy for the user to evaluate the RF performance of the CC2420 and to minimize the time spent on evaluation.

CC2420EMK Kit Includes:

- 2 CC2420 Evaluation Modules
- 2 Antennas

RL Re-reeling available

CC2420ZDK Zigbee Development Kit

This kit is based on the CC2420 transceiver, which has low current consumption and excellent radio characteristics. This enables long battery life with very good range and robust performance. The hardware included in the CC2420ZDK contains necessary support to evaluate, demonstrate, prototype and develop software targeting various ZigBee™ applications. A 30 day evaluation license is included in this kit.

Kit Includes:
- ZigBee Software Development Suite
- CC2400EB Evaluation Board
- CC2420EM Evaluation Module
- 5 CC2420DB Demonstration Boards
- 5 sample pieces of CC2420
- Antennas
- An Atmel JTAG ICE programmer and adapters
- Sensor Network Analyzer from Daintree

CC2430DB Demonstration Board

The CC2430 Demonstration board is based on the CC2430, a System-on-Chip solution for IEEE 802.15.4 and ZigBee™ applications. The CC2430DB includes many useful peripherals. It can be powered from two AA batteries, over the USB interface or from the 9V DC connectors. It is designed for low power operation to give long battery life. All I/O ports on the CC2430 are available on pin row header at the edge of the board. All I/O signals are available on header connectors on the CC2430DB to allow easy access for connecting external target boards, oscilloscope probes or logic analyzers. The CC2430DB can also be used as an In Circuit Emulator and programmer for custom boards. In addition to this it can be used as a packet sniffer together with TI's packet sniffer software to monitor traffic over the air.

Features:
- Light sensor
- 2-way accelerometer
- Temperature sensor
- Battery monitor
- Potentiometer
- Push button and joystick
- LEDs

CC2430 ZigBee Development Kit

The CC2430ZDK is designed to deliver the most powerful elements for ZigBee™ development. The kit is based on the CC2430 System-on-Chip, which includes the core of the CC2420 transceiver, an 8051 controller, flash memory and lots of useful peripherals.
The SmartRF04EB provides the user with functionality such as joystick, buttons, USB port, RS-232 port and an LCD display. This board also includes hardware support for programming CC2430EMs and custom made boards.
The CC2430DB demonstration board will render it possible to implement true low power applications that can last on batteries for years.

Kit Includes:
- TI's ZigBee stack, Z-Stack
- 2x SmartRF04EB Evaluation Boards
- 2x CC2430EM Evaluation Modules
- 5x CC2430DB Demonstration Boards
- Antennas and batteries
- IAR EW8051 C-compiler with C-SPY debugger (30+60 days evaluation license)

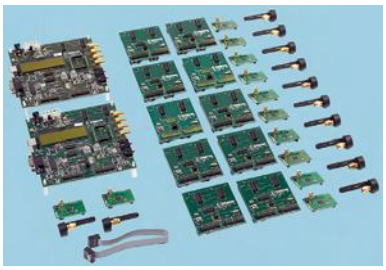
CC2430 Development Kit

The CC2430DK Kit allows for development of applications based on the 802.15.4 network standard. The kit includes all required hardware and software to evaluate, demonstrate, prototype and develop various applications.
The CC2430DK can be used to develop from simple light switches to advanced nodes with many peripherals. A set of sample applications and an 802.15.5 MAC (Media Access Control) software is included to allow users to test performance straightout of the box. A set of hardware interface library software is included.
No additional programmer is needed for the CC2430. Custom boards can be programmed using the SmartRF04EB Evaluation Board, which is included in all CC2430 kits.

Kit Includes:
- 2 x SmartRF04EB Evaluation Boards
- 2 x CC2430EM Evaluation Modules
- 2 x 2.4GHz Antennas
- 2 x USB cables
- CC2430 samples
- 1 x 10-wire flat cable for using SmartRF04EB as emulator for external target



Chipcon Software:
- SmartRF® Studio configuration and test tool
- Chipcon Packet Sniffer

3rd Party Software:

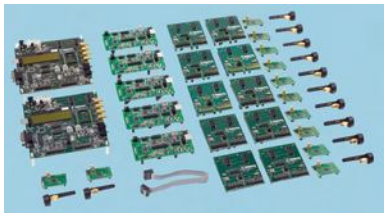
CC2431 ZigBee Development Kit



The CC2431DK Development Kit includes a sample application for location calculation and demonstration. Users can evaluate SmartRF®04 products. By applying power to the boards the plug and play kit can be used for range testing. SmartRF® Studio can be used to perform RF measurements, the radio can be easily configured to measure sensitivity, output power, and other RF parameters.
The CC2431DK includes a USB interface that can be used as emulator interface for the CC2430/CC2431. All I/O ports are available on pin connectors on the edge of the board to allow easy access for external applications.

Kit Includes:
- 2x SmartRF®04EB
- 10x SoC_BB
- 2x evaluation modules (CC2430EM)
- 10x evaluation modules (CC2431EM)
- 12x 2.4 GHz antennas
- 2x USB cables
- 1x 10-wire flat cable for using SmartRF®04EB as emulator for external target systems
- Quick start guide

CC2431 Zigbee Development Kit

The CC2431ZDK is designed to deliver the most powerful elements for ZigBee™ development with the location engine in the market today. The kit is based on the CC2431 System-on-Chip, which includes the core of the CC2420 transceiver, an 8051 controller, 128 kByte flash memory and lots of useful peripherals. It is a very flexible kit that can be used to develop everything from simple light switches to advanced nodes.

The bundled version of the Sensor Network Analyzer from Daintree Networks provides the following:
- Licensed version of the Sensor Network Analyzer Basic edition
- 30-day trial licenses of the Sensor Network Analyzer Professional and Standard editions
- 30-day technical support and software update subscription

Kit Includes:
- TI's ZigBee stack, Z-Stack
- 2 SmartRF04EB Evaluation Boards
- 2 CC2430EM Evaluation Modules
- 5 CC2430DB Demonstration Boards
- 10 CC2431EM Evaluation Modules
- 10 Battery Boards for use with the CC2431EMs

Communications - ZigBee (IEEE 802.15.4) / ISM - continued

System-on-Chip Solutions for 2.4GHz IEE 802.15.4 / Zigbee™

The CC2430 has 128 KB of flash memory. It is a true System-on-Chip solution specifically tailored for IEEE 802.15.4 and ZigBee® applications. It enables ZigBee nodes to be built with very low total bill-ofmaterial costs.

The CC2431 is a true System-On-Chip (SOC) for wireless sensor networking ZigBee/IEEE802.15.4 solutions. The chip includes a location detection hardware module that can be used in so-called blind nodes to receive signals from nodes with known locations. The CC2431 is highly suited for systems where ultra low power consumption is required.

CC2430ZF128RTC and CC2431ZRTC Include royalty for using TI's ZigBee® Software Stack, ZStack™ in an end product

CC2520 Development Kit

The CC2520 Development Kit includes hardware and software that allows quick testing of the CC2520 RF performance and offers a complete platform for development of advanced prototype RF systems and for evaluation of the CC2520 right out of the box. The kit can be used for range testing using the pre-programmed PER tester running on the MSP430F2618.
Use SmartRF® Studio to perform RF measurements. The radio can be easily configured to measure sensitivity, output power and other RF parameters. All I/O from the CC2520 are available on pin connectors on the SmartRF®05EB and on the CCMSP-EM, allowing easy interconnection to other devices or controllers. These connectors are also compatible with logic analyser probes for easy debugging.

Kit Includes:
- 3x SmartRF®05EB
- 3x CC2520EM evaluation modules
- 3x Antennas
- 2x CCMSP-EM430F2618
- 1x MSP-FET430UIF debug interface

CC2500/CC2550 Development Kit

The **CC2500/CC2550DK** development platform supports evaluation, development and prototyping. The user can test range and transfer data from one PC to another using the kits, straight out of the box, enabling the user to workout product fit for the intended application.

CC2500/CC2550DK Incudes:
- 2x Evaluation Boards
- 2x CC2500 Evaluation Modules
- 1x CC2550 Evaluation Module
- Cables and Antenna

The **CC2550EM** contains the CC2550 chip and all the necessary external components, a 26MHz crystal with +/-10ppm initial tolerance and +/-10ppm temperature drift in the range 0 to + 50°C. The load capacitors used are 16pF. A 56kΩ 1% resistor is used to set up a biasing current for the CC2550. The components connected to the RF pins of the CC2550 match to 50 Ohms.

CC2550EM Includes:
- 2x Evaluation Modules
- Antenna

System-on-Chip 2.4 GHz RF Transceivers

with MCU, Memory and USB Controller

The CC2510Fx/CC2511Fx are true low-cost 2.4 GHz system-on-chip (SoC) designed for lowpower wireless applications. They combines the excellent performance of the state-of-the-art RF transceiver CC2500 with an industry-standard enhanced 8051 MCU, up to 32 kB of in-system programmable flash memory and 4 kB of RAM, and many other powerful features.
The CC2511Fx adds a full-speed USB controller to the feature set of the CC2510Fx. Interfacing to a PC using the USB interface is quick and easy, and the high data rate (12 Mbps) of the USB interface avoids the bottlenecks of RS-232 or low-speed USB interfaces.

MSP430 Wireless Development Tool

The eZ430-RF2500 is a complete wireless development tool for the MSP430 and CC2500. The tool includes a USB-powered emulator to program and debug your application in-system and two 2.4-GHz wireless target boards featuring the highly integrated MSP430F2274 ultra-low-power MCU. The eZ430-RF emulator interface may be used with any Spy Bi-Wire enabled MSP430, such as the F22xx and F20xx series, and is fully compatible with the eZ430-F2013 and eZ430-T2012 target boards.

Features:
- Supports development with all Spy Bi-Wire devices (MSP430F22xx and F22xx)
- Supports MSP430 Application UART allowing serial communication to PC
- eZ430-RF2500T, wireless target board
- MSP430F2274 - 32KB Flash, 1KB RAM, 1 USCI (UART, (2) SPI, I2C, IrDA), 10-bit 200 ksps, 2 Op Amps
- CC2500 - 2.4 GHz, ISM band multi-channel low power transceiver
- eZ430-RF, debugging interface
- Removable USB stick enclosure

ZigBit Development Kit

MeshNetics offers the developers easy-to-use tools to evaluate the ZigBit 802.15.4/ZigBee module, and develop a module-based wireless solution. The Development Kit enables developers to write custom embedded applications using eZeeNet API, prototyping and testing devices with the extra ZigBit module samples (ordererable separately)
ZigBit™ Development Kit (ZDK) is a simple yet powerful tool that enablesDevelopment of wireless sensor network solutions while speeding up time to market and keeping costs down. ZDK is comprised of the ZigBit Evaluation Kit hardware set with testing and embedded application development software.

Development Kit Contents:
- 3 x MeshBean evaluation boards with sensors
- 1 x ZigBit module mechanical sample
- 3 x AC power adaptors with cords
- 3 x USB cables
- 2 x RS232 cables
- 1 x software & documentation CD

Developer's Tools to Create Custom Applications
- Open source HAL to provide full programming support and integration of 3rd-party sensors selected by developer
- Sample applications to bootstrap application development
- Intuitive development environment from Atmel
- Support for client-programmed applications with direct access to ZigBee embedded software stack, i.e. eZeeNet and HAL (100% ANSI C99)
- Convenient reference drivers and APIs for UART, I2C, ADC, and 1-wire interfaces

MeshBean Evaluation Board
- Features ZigBit OEM module with PCB-printed antenna
- Supports standard extension connectors
- Includes temperature, light sensors and other peripheral devices on board

eZeeNet: A Robust IEEE802.15.4/ZigBee Software Stack
- Conforms to ZigBee 1.0 specification
- Tailored for easy-to-use networking in sensing, control, monitoring and data acquisition applications
- Supports mesh and tree network topologies
- Provided as library objects with full API specification in headers

SerialNet: Serial AT Commands for Easy Application Prototyping
- Layered on top of eZeeNet IEEE802.15.4/ZigBee software stack
- Allows programming the board through AT-command serial interface
- No need to program the MCU directly
- Easy evaluation of eZeeNet stack functionality via AT-commands

WSN Monitor: Software for Sensor Networks Visualization
- Visualizes typical data acquisition scenario
- Allows easy evaluation of range and network performance, incl. self-healing feature
- Supports visualization of network topologies

ZigBit™ Development Tools

These easy-to-use tools are used to evaluate the ZigBit 802.15.4/ZigBee module and develop a module-based wireless solution. They provide a convenient way to assess range performance and power consumption of modules in-field. They also enable developers to write custom embedded applications using eZeeNet API.

The ZigBit Development Kit Lite comes with 45 days of complimentary support. This option is good for product demonstration, platform evaluation and quick application prototyping. It gives the user access to standard evaluation and development tools.

The ZigBit Development Kit Complete comes with 1 year of professional support. It provides users with continuous software updates, dedicated design-in support, and RF design assistance. It's ideal for those engaged in a full cycle of developing, prototyping, and launching of innovative products.

Kit Contents:
- 3 x MeshBean Development Boards with Sensors
- 3 x USB Cables
- 2 x External Interface Cables
- 1 x Software and Documentation CD

ZigBit Evaluation Kit

MeshNetics offers the developers easy-to-use tools to evaluate the ZigBit 802.15.4/ZigBee module, and develop a module-based wireless solution. The Evaluation Kit is a convenient way to assess range performance and power consumption of modules in the field.

Evaluation Kit Contents:
- 3 x MeshBean evaluation boards with sensors
- 1 x ZigBit module mechanical sample
- 3 x AC power adaptors with cords
- 3 x USB cables
- 2 x RS232 cables
- 1 x software & documentation CD
- Free 45 day evaluation of the ZigBit Dev Kit software with limited programming support

MeshBean Evaluation Board
- Features ZigBit OEM module with PCB-printed antenna
- Supports standard extension connectors
- Includes temperature, light sensors and other peripheral devices on board

eZeeNet: A Robust IEEE802.15.4/ZigBee Software Stack
- Conforms to ZigBee 1.0 specification
- Tailored for easy-to-use networking in sensing, control, monitoring and data acquisitio-napplications
- Supports mesh and tree network topologies

SerialNet: Serial AT Commands for Easy Application Prototyping
- Layered on top of eZeeNet IEEE802.15.4/ZigBee software stack
- Allows programming the board through AT-command serial interface
- No need to program the MCU directly
- Easy evaluation of eZeeNet stack functionality via AT-commands

WSN Monitor: Software for Sensor Networks Visualization
- Visualizes typical data acquisition scenario
- Allows easy evaluation of range and network performance, incl. self-healing feature
- Supports visualization of network topologies
- Allows remote network configuration from your PC

ZigBit Amplified Modules

ZDM-A1281-PN

ZDM-A1281-PN0

The ZigBit™ A1281-PN Series are ultra-compact, extended range, low-powered, high-sensitivity 2.4GHz 802.15.4/ZigBee OEM modules. They are enhanced by an output power amplifier and an input low-noise amplifier. They are designed for wireless sensing, monitoring & control and data acquisition applications. These modules eliminate the need for costly and time-consuming RF development, and shorten time to market for wireless applications with extended range requirements.

Key features:
- Ultra compact size
- High RX sensitivity (-104 dBm)
- Up to +20 dBm output power
- Very low power consumption
- 128K bytes of flash memory, 8K bytes RAM, 4K bytes EEPROM
- Wide range of interfaces
- 4 ADC lines + 1 line for supply voltage control
- UART with CTS/RTS control
- USART, I2C, SPI, 1-Wire
- IEEE 802.15.4 compliance
- 2.4 GHz ISM band

Benefits:
- Up to 4 kilometers (2 ½ miles) outdoor line of sight range
- Ultra low power consumption combined with outperforming range
- Rapid design-in with onboard U.FL connector (ZDM-A1281-PN)
- Flexibility in using a different external antenna for every application
- Small physical footprint and low profile for optimum fit in even the smallest of devices
- Mesh networking capability
- Easy-to-use low cost Development Kit
- Single source of support for HW and SW

Zigbit - OEM Zigbee Modules

Ultra Compact 2.4GHz IEEE802.15.4/ZigBee modules for Wireless Mesh Networking Applications

ZMD-A1281

ZMD-A1281A2

ZigBit is a low-power, high-sensitivity module based on the innovative Atmel's mixed-signal hardware platform. It is designed for wireless sensing, control and data acquisition applications. The ZigBit module eliminates the need for costly and time consuming RF development, and shortens time to market for a wide range of wireless applications. ZigBit packs impressive functionality into less than a square inch of space. Based on a combination of the popular ATmega 1281v MCU and the latest Atmel AT86RF230 radio transceiver, the ZigBit offers superior radio performance with exceptional ease of integration.

The ZigBit already contains a complete RF/MCU-related design with all the necessary passive components included. The module can be easily mounted on a simple 2-layer PCB. No RF expertise is required. Innovative chip antenna design in ZDMA1281- A2 module eliminates the balun and achieves good performance over ZigBee frequency band.

- Ultra compact size: 24 x 13.5 mm for ZDM-A1281-A2 with antenna, 18,8 x 13.5mm with balance RF port
- 2 Antenna options (dual chip antenna and RF output versions)
- Reference hardware drivers
- High immunity to radio interference
- 802.15.4/ZigBee stack
- Network-wide power management software
- Ample memory resources (128 kBytes of flash memory, 8 kBytes RAM, 4 kBytes EEPROM)
- Sample application library
- Very low power consumption (≤6 µA in deep sleep mode)
- Ample memory resources (128 kBytes of flash memory, 8 kBytes RAM, 4 kBytes EEPROM)

Wide range of interfaces (both analog and digital):
- 10 spare GPIO, 2 spare IRQ lines
- 4 ADC lines
- UART with CTS/RTS control
- I2C, USART/SPI
- Up to 30 lines can be configured as GPIO

PIXIE Evaluation Board

Zigbee Demo Board

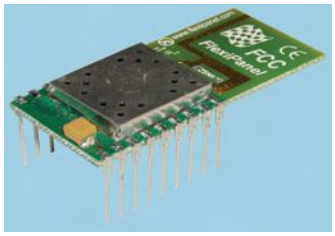
The Pixie Evaluation kit consists a set of two boards, one with a Pixie module mounted onboard, the other with a Pixie Lite module mounted on-board. The modules are preloaded with Pixie Switcher firmware. This is simple switching function using the ZigBee HC-L profile for telemetry.
It is designed to aid speedy development and configuration of a zigbee application. Additionally, the demo boards can be used during development as a reliable, tested environment while trouble-shooting.

The Zigbee Demo Board is designed to evaluate the following Zigbee products:

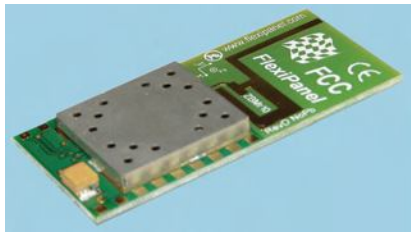
- EASYBEE
- PIXIE
- PIXIE-LITE

Features:

- Sockets for all modules
- Power regulator, switch and LED, powered from 5-12V DC
- Jumper switches for board configuration
- RS232 serial port and TTL to RS232 converter
- Toothpick ICD2 programming socket
- 24C256 I2C memory chip
- All the pushbuttons, LEDs, presets and switches to run the tutorials in the products data sheets



The eval kit is supplied with a variety of firmware solutions, including:



- Switcher HC-L profile (preloaded)
- Sniffer packet eavesdropping
- DataStream serial profile
- Trace asset tracking
- DARC data acquisition & remote control

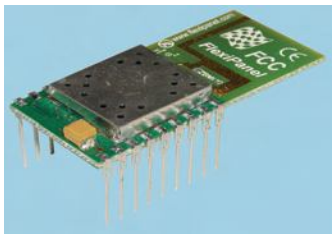
EASYBEE: Zigbee Radio Module

New

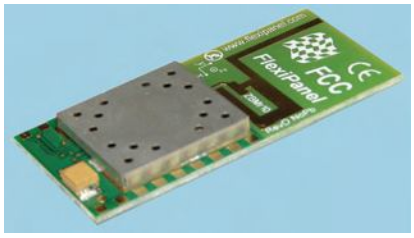
EasyBee is an IEEE 802.15.4 compliant RF transceiver. It enables designers to easily add ZigBee / IEEE 802.15.4 wireless capability to their products without the need for RF or antenna design expertise.
EasyBee is a fully capable device and a ZigBee networking layer is not required for point-to-point communication. If ZigBee is required, compatible ZigBee stacks include Microchip Technology's free ZigBee stack, and Figure-8's ZigBee stack.This module is an application-ready solution for fast-to-market ZigBee and IEEE 802.15.4 communications, providing the development engineer unlimited choice of host controller and stack firmware provider.

Features

- 2.4GHz IEEE 802.15.4 / ZigBee RF module
- Free space range upto 120m
- Raw data rate 250kbps
- Integral antenna
- External antenna and screening-can options
- Based on ChipConCC2420
- Separate 128-byte Rx & Tx FIFO buffers
- Output power 1mW / 0dBm
- Consumes 20mA (Rx), 18mA (Tx)
- 2.1V - 3.6V supply
- Wide temperature range -40C to +85C



Applications



- Remote Control and Wire Replacement
- Wireless sensor networks
- Factory and Home Automation
- Energy management, Security, Lighting
- Inventory and Logistics Management
- Temperature and condition sensing.
- HID (Human Interface Devices) -Keyboards, Mice
- Toys, Home Gateways - Set-top boxes

PIXEE: Zigbee Radio Module

New

Pixie provides a complete OEM ZigBee solution, integrating IEEE 802.15.4 2.4GHz PHY / MAC layers with Microchip Technology's NWK / APL / ZDO layers. It provides a path for extremely rapid migration from Microchip's PICDEM Z ZigBee development environment to market-ready product.
Pixie is capable of full function device (FFD) operation and is suitable for router and coordinator nodes. The lower cost PICZee Lite, is used for reduced function devices, e.g. endpoints, with 2 fewer I/O lines.
Pixie is electrically virtually identical to the PICDEM Z ZigBee development environment and is fully compatible with Microchip Technology's free ZigBee stack, Compatible with ZigBee 1.0
FlexiPanel Ltd profiles in development for switching, serial data communications, UI servers, displays and sensors Only configuration bits and I/O pin definitions are changed during migration from PICDEM Z

Features

- Free space range upto 120m
- Integral antenna
- MAC address provided
- Output power 1mW / 0dBm, 100m range
- Consumes <25mA active, sleep mode: 2μA
- 15 general I/O lines,
- 8-channel 10-bit A/D,
- serial UART, 4 interrupts,
- counter input
- Master SPI
- Wide temperature range -40C to +85C
- 2.1V - 3.6V supply, ideal for Li rechargeables

Applications

- Remote Control and Wire Replacement
- Wireless sensor networks
- Factory and Home Automation
- Energy management, Security, Lighting
- Inventory and Logistics Management
- Temperature and condition sensing.
- HID (Human Interface Devices) -Keyboards, Mice
- Toys, Home Gateways - Set-top boxes

Pixie Configuration Tool

The Pixie Configuration tool is a USB to TTL-level serial adapter for use with Pixie ZigBee and LinkMatik / Toothpick Bluetooth devices. It connects directly to a PC USB socket. USB driver software is supplied. On the PC, the tool looks like a COM port can is compatible with Windows serial port applications such as Windows HyperTerminal.

Communications - ZigBee (IEEE 802.15.4) / ISM - continued

Zigbee Radio Modules

Zigbee is the next generation wireless protocol, providing low cost, low power and powerful protocol. These OEM modules provide an easy Zigbee solution for many applications.

- 2.4GHz IEEE 802.15.4/ZigBee
- Raw data rate 250kbps
- Based on ChipCon CC2420 RF controller
- 4-wire SPI interface
- Separate 128-byte Rx & Tx FIFO buffers
- Controller Options: PIC (Microchip stack), or ATMEL (Figure-8 stack)
- Output power 1mW/0dBm
- Consumes just 20mA (Rx), 18mA (Tx)
- 2.1V - 3.6V supply
- Wide temperature range -40°C to +85°C

Applications

- IEEE 802.15.4 & ZigBee networks
- Cable replacement
- Home / building automation
- Industrial control & networking
- Wireless sensor networks

EZBEE

EZBee enables designers to easily add ZigBee / IEEE 802.15.4 wireless capability to their products without the need for RF or antenna design expertise.
The module contains all RF circuitry, including integral antenna and controller in a simple-to-use, plug-in or surface mount module.

- 4-wire SPI port interfaces to a baseband microcontroller
- PHY (Physical) layer includes an impedance matched balun and integral antenna
- MAC (Media Access Control) layer includes CRC-16 generation, clear channel assessment, signal energy detection, security, encryption and authentication
- eZBee is a fully capable device and a ZigBee networking layer is not required for point-to-point communication

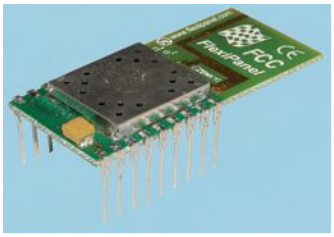
PIXZee

PIXZee and PIXZee lite provide a complete ZigBee solution for OEM applications, integrating IEEE802.15.4 2.4GHz PHY/MAC layers with Microchip Technology's NWK/APL/ZDO layers. It provides a path for rapid migration from Microchip's PICDEM Z ZigBee development environment to market-ready product.
The Modules are capable of full function device (FFD) operation and suitable for router and coordinator nodes. The lower cost PIXZee Lite version is used for reduced function devices, eg. endpoints, with 2 fewer I/O lines and being 3mm more compact.

- MAC address provided
- Integral antenna
- Output power 1mW/0dBm, 100m range
- 15 general I/O lines, featuring 8-channel 10-bit A/D, serial UART, 4 interrupts, counter input
- Master SPI

Firmware Features

PIXZee is electrically virtually identical to the PICDEM Z ZigBee development environment and is fully compatible with Microchip Technology's free ZigBee stack, featuring: Compatibility with ZigBee 1.0 specification



- Up to 254 end devices per network
- Support for Home Control, Lighting Profiles, switching, serial data communications, UI servers, displays and sensors etc.

PIXEE Switcher

IEEE 802.15.4 transceiver & ZigBee stack preloaded with Switching firmware

New

Pixie Switcher is free switching firmware for Pixie and Pixie Lite. Using the Home Control - Lighting (HC-L) ZigBee profile, it provides up to 8 inputs (control switches) or outputs (load controllers). These may be bound to any HC-L devices in the ZigBee network. For example, a single Pixie Switcher could be configured as 8 inputs, 8 outputs, or 4 of each. Pixie Switcher requires only a few residual components to provide a complete wireless switching system.

Firmware Features:

- 8 I/O endpoints each configurable as one of:
  - On / off / toggle / timer / programmable input
  - On / off / pulse output
  - Power control
  - Time delay setpoint
  - Failsafe alarm reporting when contact is lost, out of range, low battery or device fault
- Control I/O for joining & binding, status indication
- Battery monitoring
- 4 operating modes:
  - Coordinator router
  - Router
  - Fast end device
  - Sleepy end device
- Signal strength indication
- Serial port for configuration and diagnostics
- ZigBee 1.0 HC-L compatible
- Up to 254 end devices per network
- Up to 255 binding table entries
- Up to 25/24 neighbors per router / coordinator
- Pre-allocated unique MAC address
- Lite version available:
  - End device only
  - 6 I/O endpoints

UZBee: ZigBee USB Dongle

New

UZBee is an EasyBee ZigBee / IEEE 802.15.4 radio with USB interface, housed in a handy adapter enclosure.
UZBee uses FlexiPanel's USBoot™ technology. This allows the firmware to be changed via the USB port without any specialist programming equipment. OEMs wishing to customize UZBee can program the onboard PIC18LF4550 microcontroller as required. The Free Microchip Stack for ZigBee is available for use with this product, although the entire full function stack will not fit on-board. Please contact Flexipanel for further details.

- USB to ZigBee Interface
- 2.4GHz IEEE 802.15.4 RF module
- PIC18LF4550 USB microcontroller
- FCC / CE compliant
- Signature 'G' antenna, free-space range 120m, compact, low 'hand-effect' design
- Reflashable with Flexipanel USBoot™ technology
- Pushbutton and Status LED

2.4GHZ Video/Audio Modules

These RF modules provide a reliable, low cost solution for OEM's designing wireless video/audio applications to operate over distances of up to 100m LOS. The modules are compliant with FCC and R&TTE criteria and are produced in line with new RoHS guidelines.

- Worldwide 2.4GHz ISM band
- Compact size and low power consumption
- Highly efficient FM-FM modulation/demodulation
- Compatible with both NTSC and PAL video formats
- Integrating audio/video input and output into one module base-band PCB
- No external audio circuit needed

Low Cost 2.4GHz Transceiver Module

The Quasar UK 'TRX1' hybrid transceiver module provides a complete RF subsystem which can be used to transmit and receive data at up to 500Kbps from any standard CMOS/TTL source. Extensive hardware support is provided for packet handling, data buffering, burst transmissions and link quality indication. Automatic collision avoidance is also provided with the clear channel assessment features.
The modules are ideal for battery powered applications, current consumption is reduced with the burst transmissions and wake on radio features. The data stream can be automatically Manchester encoded and decoded ensuring high reliability and low error rates.The modules frequency, out-

Features

- Complete RF Transceiver
- Onboard Data Encryption
- Chipcon CC2500
- Automatic collision avoidance
- 'Wake on Radio' feature
- Low current consumption
- Wide Operating voltage 1.8 - 3.6 Volts
- Operating Frequency: 2.4 - 2.483 GHz
- Programmable Output Power
- Range up to 50 metres at +1dBm
- Data rate 1.2 - 500 kbps

XStream™ Wireless Module & Development Kit

X24-009-DK

X24-009NSC

The 24XStream OEM RF Module makes it simple to design and range test custom wireless networks. The module is a drop-in wireless solution that transfers a standard asynchronous serial data stream.

The 2.4 GHz 24XStream Development Kit includes everything you need to set-up a versatile wireless network in a matter of minutes. It includes multiple networking topology options along with advanced interference rejection, redundant reliability and worldwide approval.

Kit Includes:

- 1x XStream OEM RF module with an integrated whip antenna
- 1x XStream OEM RF module with (1) 1/2 wave dipole antenna
- 2x RS-232 / RS-422 / RS-485 PC serial interface boards
- 2x DSub-9 serial cables
- 1x 9V battery clip
- 1x Serial loopback adapter
- 1x Male-to-male null modem adapter
- 1x Female-to-female null modem adapter
- 1x DB-9 male to RJ-45 female adapter
- 1x DB-9 female to RJ-45 female adapter
- 1x CD with X-CTU™ test/config utility software, manuals and documentation

XBee & XBee-PRO Wireless Modules & Development Tools

XBee Starter Development Kit

XBee Professional Development Kit

OEM Modules

XBee-PRO Starter Development Kit

Price-to-Performance value and easy to use with no configuration necessary for out of box RF operation. Simply feed data into one module and the data is sent out the other end of the wireless link. If more advance function is required, the modules provide an extensive set of AT commands.
The XBee OEM RF Modules are ZigBee/IEEE 802.15.4 compliant solution for low-power wireless sensor networks, providing reliable data transfer between devices.
Topology supports point-to-point, point-to-multipoint, Peer-to-Peer and Mesh Network via 16/12 Direct Channel.
Frequency ranges are 900MHz for North America and 2.4GHz for Europe.

Development Kit contents:

- XBee-PRO OEM RF Module with integrated wire antenna
- XBee-PRO OEM RF Module with U.FL RF connector to antenna
- XBee Module with chip antenna
- XBee Module with integrated wire antenna
- XBee Module OEM RF Module with U.FL RF connector to antenna
- Half-wave, 2.1dBi, dipole antenna w/ connector
- RS-232 inteface board, RS-232 cable
- 9V 1A power adapter, 9V battery clip
- Null modem adapter, male-male/female-female
- CD with test & configuration software, documentation and development tools
- RF cable assembly - adapter for connecting antenna to U.FL connector
- USB interface board and USB cable

Specification:	XBee	XBee-PRO
Indoor/Urban	Up to 100 ft. (30 m)	Up to 300 ft. (100 m)

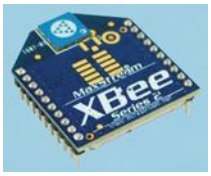
XBEE RF Modules

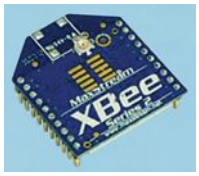
New

XB24-BPDK



The XBee Development Kit provides everything that is needed to rapidly create long range wireless data links based on MaxStream's XBee modules. The XBee modules feature self-discovery/self-healing mesh networking and support for coordinators, routers, end devices and low-power sleep modes.

Kit Includes:



- (1) XBee ZNet 2.5 w/ Wire Antenna (Coordinator)
- (1) XBee ZNet 2.5 w/ Wire Antenna (Router)
- (1) XBee ZNet 2.5 w/ Chip Antenna (Router)
- (1) XBee ZNet 2.5 w/ U.fl Connector (Router)
- (1) XBee ZNet 2.5 w/ RPSMA Connector (Router)
- (3) RS 232 Development Boards
- (2) USB Development Boards
- (2) 2.4 GHz RPSMA Antenna
- (1) U.fl to RPSMA Adapter Cable
- (3) RS 232 Serial Cables
- (2) USB Cables
- (1) Power Adapter
- (3) 9V Battery Clips
- (3) Adapters

XB24-BWIT-004

XB24-BCIT-004

XB24-BUIT-004

XB24-BSIT-004

The XBee OEM RF Modules have been engineered to operate within the ZigBee protocol and support the unique needs of low-cost, low-power wireless sensor networks. They require minimal power and provide reliable delivery of data between remote devices. All these modules operate within the ISM 2.4 GHz frequency band.

The XBee 802.15.4 OEM RF module is an IEEE 802.15.4 compliant solution that satisfies the unique needs of low-cost, low-power wireless sensor networks. It is easy-to-use, requires minimal power and provides reliable delivery of critical data between devices. Its small form factor saves valuable board space.

W1030

JF1R6-CR3-41

- The JF1R6-CR3-41 cable assembly is for connecting the RPSMA antenna to U.FL connector
- The W1030 External Antenna is for WLAN devices using ZigBee™, WiFi (802.11b/g) and Bluetooth®. It has a Omni-directional radiation pattern that provides broad 360° coverage

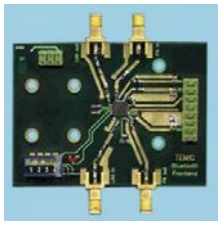
AVR Z-Link Development Tools ATAVRRZ502 RF Accessory Kit



The RZ502 RF accessory kit enables point to point links development, debugging and demonstration. Advanced network topologies can be developed by adding more RF accessory kits. The kit is a module for the STK®500 AVR starter kit; requires a STK500 for development purposes.

RF Accessory Kit contents:
- 2 Radio boards with SMA stub antennas for STK500 mounting
- 2 ATmega1281V TQFP AVR Microcontrollers
- Atmel IEEE 802.15.4 MAC software free of charge
- Wireless Management & Configuration Software (WMCS) graphical user interface configuration tool
- PCB layout reference (Gerber files)

ATR2406 Development Board

The ATR2406-DEV-BOARD2 is a complete long range RF-Module with the low-IF Transceiver ATR2406 and the PA-LNA front-end IC, T7024. It is designed to make it very easy and convenient for the user to evaluate the RF IC performance and develop custom specific applications. The RF-Module is available seperately. It consists of 1 complete "solder-on" RF-Module (Reference Design), 1 Interface board incl. SMA connector, 1 CD-ROM with sample firmware and Manufacture Data (Gerber Files).

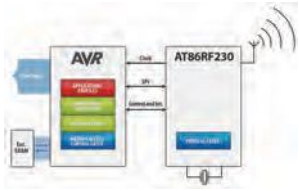
AVR RAVEN Modules & Development Kit

New

The RZRAVEN is a development kit for the AT86RF230 radio transceiver and the AVR microcontroller. It is a versatile and professional platform for developing and debugging a wide range of RF applications. The USB and LCD modules are available separately.

Features:
- CE, ETSI and FCC approved.

LCD Module:
- AT86RF230 radio transceiver with high gain PCB antenna
- Dual AVR microcontrollers
- Dynamic Speaker and microphone
- Atmel Serial Dataflash®
- User IO section:



- USART, GPIO, Relay Driver

USB Module:
- AT86RF230 radio transceiver with miniature PCB antenna.
- AVR microcontroller with integrated Full Speed USB interface.
- External memory interface.

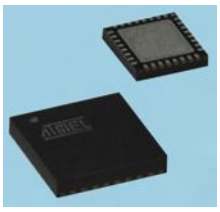
AVR 8-Bit RISC - AVR Z-Link™ for IEEE 802.15.4™ and ZigBee™

AVR is an established low power microcontrollers in the market with efficient core and peripherals, perfectly matched for most microcontroller applications, including wireless.



The AVR Z-Link solution - A wireless application based on three components; microcontroller, radio and firmware. By combining AT86RF230 radios, AVR microcontrollers and highly efficient software MAC, Atmel provides a complete source for wireless applications.

AVR Z-Link provides an industry leading 2.4GHz transceiver with up to 2.8 times the range of the similar standard parts. With -101dBm receive sensitivity and 3dBm transmit power, the RF230 radio gives the highest link budget of any 802.15.4 radio on the market. A superior line-of-sight range and a radio requiring only six external components gives advantage in terms of cost and flexibility.

Communications - ZigBee (IEEE 802.15.4) / ISM - continued

AVR 8-Bit RISC - AVR Z-Link™ for IEEE 802.15.4™ and ZigBee™ - continued

AT86RF230 - ZigBee/IEEE802.15.4 Transceiver

The AT86RF230 is a low-power 2.4 GHz transceiver specially designed for low cost ZigBee/IEEE802.15.4 applications. The AT86RF230 is a true SPI-to-antenna solution. All RF-critical components except the antenna, crystal and de-coupling capacitors are integrated on-chip.

The single-chip RF transceiver provides a complete radio interface between the antenna and the microcontroller. It comprises of the analogue radio, digital demodulator including time and frequency synchronisation and data buffering. The bi-directional differential antenna pins are used in common for RX /TX, no external antenna switch is needed.

Features:
- Fully integrated 2.4GHz transceiver
- -101dBm receiver sensitivity
- Power Supply: 1.8 - 3.6V
- SPI slave interface
- Integrated
  - Crystal Oscillator, 16MHz
  - TX/TX switch
  - LNA
  - PLL loop filter
- Digital RSSI register, 5-bit value
- Fast power-up time <1ms
- Programmable TX o/p power, -17 to 3dBm
- Auto-VCO and filkter calibarteion
- 32-pin QFN package

Zigbee™ Modules, Gateways & Sensors

ZG-2400E

ZMN2430

ZMN2405HP

ZMN2430HP

Every ZigBee module from Cirronet comes with FCC module certification. This means FCC type acceptance testing is not required for devices into which the OEM RF modules are integrated, so as well as saving on cost the speed to market of a product is accelerated.

The ZG-2400E Ethernet Gateway fits into existing industrial automation networks by accepting Ethernet formatted ZigBee commands, stripping the Ethernet packetization, and sending the ZigBee commands and data to the appropriate ZigBee end device or router.

The ZMN2405HP and ZMN2430HP modules are ideal for ZigBee applications needing higher RF power (+18dBm, software adjustable from -2dBm to +18dBm including industrial sensors, building and home automation, and any other applications requiring ZigBee's unique capabilities.

The ZMN2430 2.4 GHz transceiver module is a low cost solution for point-to-point, point-to-multipoint and MESH wireless systems. It provides the flexibility and versatility to serve applications ranging from cable replacements to sensor networks.

SPZB260 ZigBee® Module

New

SPZB260 is a low power consumption ZigBee® module optimized for embedded applications. It enables OEMs to easily add wireless capability to electronic devices.
The module is based on SN260 ZigBee® Network Processor which integrates a 2.4 GHz, IEEE 802.15.4-compliant transceiver as well as IEEE 802.15.4 PHY and MAC.
24 MHz high stability Xtal is available aboard the module to perform the timing requirements as per ZigBee® specifications.A single supply voltage is requested to power the module. An integrated 2.5 GHz specific Murata antenna is aboard. The voltage supply also determines the I/O ports level allowing an easy interface with the host system.
The module is controlled by means of a standard serial interface (SPI) allowing the connections to a variety of Host microcontrollers.

ETRX2 Development Kits

Telegesis ember New

ETRX2DVKA

ETRX2DVKA PLUS

The **ETRX2DVKA** Development Kit has been designed to enable fast and simple evaluation and development of the low cost, low power, ZigBee meshing solution provided by the ETRX2 module. Using the comprehensive AT-style Command Dictionary and the simple to use Telegesis Terminal software package provided, it should take less than half an hour to set up a three-way mesh network and to begin detailed, in-depth assessment of the latest EmberZNet meshing technology.

The **ETRX2DVKA PLUS** kit is the same as the standard ETRX2DVKA but has additional hardware which allows the user to experiment using the power amplified ETRX2-PA modules with their greatly extended range.

ETRX2DVKA Kit Includes:
- ETRXDV - Development Board
- ETRX2HW - Module with Harwin connector to plug onto ETRXDV
- 2 x MCB Carrier Board fitted with ETRX2 module
- 2 x AA Battery Holder with lead
- USB Cable

- **ETRX2DVKA-PLUS Kit Includes:**
- As above Plus -
- ETRX2USB - USB stick
- ETRX2HRHW-PA - Module with Harwin connector
- MCB Carrier Board fitted with ETRX2-PA module
- AA Battery Holder with lead
- 1/2 Wave external antenna
- 100mm cable - connects HR module to antenna

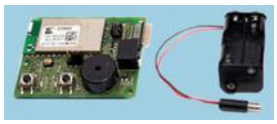
ETRX2 Wireless Mesh Networking Modules

Telegesis ember New

The **ETRX2** modules are a low power, 2.4GHz ISM band transceiver, based upon the Ember EM250 single chip ZigBee / IEEE802.15.4 solution and EmberZNet 2.xx meshing technology. Designed for integration into any device without the need for RF expertise the ETRX2 enables the user to add powerful wireless networking capability to their products and bring them quickly to market.
The **ETRX2-PA** offers boosted output power whilst being a drop in replacement for the standard ETRX2. Care was taken to retain the low deep sleep current to make this module ideally suited for battery operated end devices with the lowest transmit current in its class.



Features Include:
- Small form factor, SMT module 37.75 x 20.5mm
- Optional board-to-board or board-to-cable connector
- 128k Flash and 5kbytes of SRAM
- UART interface with DMA, optional software support for hardware I2C and SPI
- Wide supply voltage range
- Can act as an End Device, Router or Coordinator
- Firmware upgrades via RS232 or over the air (password protected)
- Hardware supported encryption (AES-128)
- Operating temperature range: -40 to +85°C

Wireless Mesh Networking Compact Flash™ Card

Telegesis ember New

The ETRX2CF wireless mesh networking Compact Flash™ card is an RS232 to Compact Flash™ bridge, connected to an ETRX2 wireless meshing module. This allows connectivity to a PDA or laptop using either the Compact Flash™ or PCMCIA (with adapter) expansion slots. To accompany the ETRX2 wireless mesh networking modules this universal compact flash card offers an easy way to ZigBee enable portable handheld devices.

Features:
- ETRX2CF acts as a CF+/PCMCIA to serial bridge connected to an ETRX2 module
- Driver Support for Pocket PC, Windows & Linux
- Telegesis Terminal support for Windows
- Allows access to the module's AT-Command line interface via a virtual com port
- Form factor: Extended Compact Flash Type II
- In circuit Programming/Debugging Headers allow for custom firmware development based on the ETRX2 platform
- Supports low power modes
- Operating Temperature range -40 - +85°C

Wireless Mesh Networking USB Stick

Based on the Ember EM250 SoC, the ETRX2USB is a high performance, low power 2.4GHz ISM band transceiver in a USB Stick form factor. It complies with the IEEE 802.15.4 wireless standard, providing a cost effective method of adding wireless sensing to any device which employs USB. For faster production development the device carries the Telegesis AT Style Command line interface which allows the quick integration of meshing radio technology without complex programming or RF design experience.

Features:

- 16 channels in the 2.4GHz ISM Band
- Integrated omni-directional antenna
- Up to 150m range
- USB bus powered
- COM port interface (virtual com port in Windows®
- 0dBm typical output power (-16.6dBm - +3.6dBm range)
- Low power sleep mode - 1.6mW
- Operating Temperature range -40 to +85°C

ETRX2 Wireless Mesh Networking Ethernet Access Points

The EAP-E (-PA) Ethernet access points allow access to an ETRX2 or ETRX2-PA wireless mesh networking module via Ethernet using the Lantronix® XPort® Direct™ serial to Ethernet bridge device. The Telegesis AT-Command interface - based on the EmberZNet meshing stack - can be easily accessed by the application software using telnet or by creating a virtual COM port using the supported Lantronix® CPR (COM Port Redirector) software for windows.

Features Include:

- Complete TCP/IP protocol stack and Windows deployment software
- Interface: Ethernet 10Base-T or 100Base-TX (Auto-Sensing)
- Link and activity indicator (LED)
- Management: Telnet and Microsoft Windows®-based utility for configuration
- Can offer access to the remote AT-Command Interface via a virtual Com port
- SIF interface for Custom application development and real time debugging of custom firmware

1321XDSK ZigBee Development Kit

The 1321xDSK development and demonstration kit is based on Freescale's 2nd generation of ZigBee Compliant platforms. The kits come with everything needed to get started, including hardware boards, cables, batteries, power adapters, software and sample applications to create proprietary and standards-based peer-to-peer and star networks.

Features:
- Two 1321x-SRB (Sensor Reference Board) boards
- MMA7260Q 3-axis acceleration sensor and temperature sensor
- Printed F antenna
- Onboard expansion capabilities for external application-specific development activities
- Programmable 60K flash with 4K of RAM
- LEDs and switches for demonstration, monitoring and control
- Supports SMAC and IEEE 802.15.4 PHY/MAC
- Kit Includes CodeWarrior™ Development Studio for HCS08 Special Edition
- USB Multilink BDM Programmer/Debugger (13192DSK-BDM only)

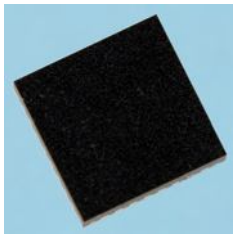
ZigBee™-Compliant 2.4GHz IEEE 802.15.4 Transceiver with MCU



The MC1321x family is Freescale's 2nd generation ZigBee platform, incorporating a low power 2.4 GHz radio frequency transceiver and an 8-bit microcontroller into a 71-pin LGA package. The MC1321x solution is useable for wireless applications from proprietary point-to-point connectivity to a complete ZigBee mesh network. The combination of the radio and a microcontroller in a small footprint package offers an effective solution.
The MC1321x contains an RF transceiver, an 802.15.4 Standard compliant radio. The transceiver includes an LNA, 1mW nominal output power, PA with internal VCO, integrated transmit/receive switch, on-board power supply regulation, and full spread-spectrum encoding and decoding.
The MC1321x also contains a HCS08 based microcontroller with 60KB of flash memory and 4KB of RAM. The onboard MCU allows the communications stack and the application to reside on the same system-in-package (SIP).

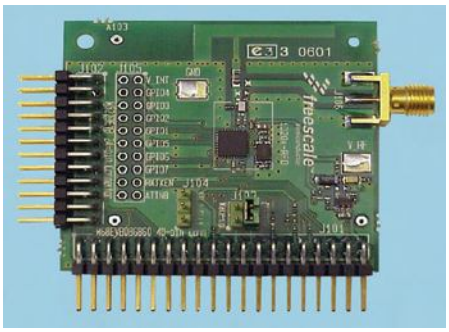
MC1320x - 2.4GHz generation II RF Transceivers



The MC1320x series of low power, short range, 2.4 GHz band transceivers are designed for wireless sensing and control applications. The MC1320x include a complete packet modem capable of formatting data into packets with 125byte payload, over the air data rate of 250kbps using O-QPSK modulation and Direct Sequence Spread Spectrum (DSSS) coding. The four wire serial peripheral interface (SPI) allows interface to a variety of processors, providing developers to tailor the solution to meet their needs.
The MC13201 radio targets proprietary applications that require wireless point-to-point or star networks and included the Freescale Simple MAC (SMAC) software.
For MC13202 the software and processor can be scaled to fit applications ranging from simple point-to-point systems, through complete ZigBee™ networking. It supports the SMAC software, IEEE 802.15.4 PHY/MAC and 3rd party ZigBee stacks.
The MC13203 supports the Figure 8 Wireless ZigBee stack, for use with the Z-Stack only

- Buffered Transmit and Receive Data Packets for Simplified Use with Low Cost Microcontrollers
- Supports 250 kbps O-QPSK Data in 2.0 MHz Channels and Full Spread-Spectrum Encode
- Three Power Down Modes for Power Conservation:
  - less than 1 μA Off Current
  - 3.0 μA Typical Hibernate Current
  - 40 μA Typical Doze Current
- RX sensitivity @ 1.0% Packet error rate
  - MC13201: -91dBm, typ
  - MC13202/MC13203: -92dBm, typ
- Integrated Rx/Tx switch
- Internal timer comparators available to reduce MCU resource requirements
- Clock output is available for use by MCU
- Seven General Purpose Input/Output ports (GPIO) available
- ·Operating Temperature Range: -40°C to 85°C

MC1320x RF Daughter Card

The MC1320x RF Daughter Card (1320xRFD-A00) is used in conjunction with a microcontroller development board for RFIC evaluation, code development, and system evaluation. The RF Daughter Card interfaces directly to the M68EVB908GB60, RG60 and QG60 HCS08 family Microcontroller Development Boards and to the M52235 EVB Microcontroller Development Board, but it can be adapted to other boards that offer access to the MCU input/output ports.
The RF Daughter Card is configured with all the off-chip circuitry required for functional performance of the MC1320x RF data modem except the MCU. The MCU interface required by the RFIC is pinned out at the edge of the card using standard header pins. The RF interface is accomplished through an onboard PCB antenna. Also, there is an SMT jumper that can be relocated, which will redirect the RF interface to an on-board 50 ohm connector. The SMA connector can be used with standard coax cables for testing purposes.

Wireless Sensing Triple-Axis Reference Design Kit

The ZSTAR demo board demonstrates Freescale's innovations in sensors, wireless connectivity and embedded flash microcontrollers.

The reference design illustrates how accelerometers can add functionality to various applications. The accelerometer measurements can be grouped into 6 sensing functions - Fall, Tilt, Motion, Positioning, Shock and Vibration.

The RD3152MMA7260Q development tool offers wireless communication using the powerful, easy-to-use 2.4GHz frequency MC13191 transceiver. Changes can be made with pin-to-pin compatibility allowing implementation of the MC13192 and MC13193 for wireless applications.

The embedded flash microcontroller, MC9S08QG8, offers a versatile combination of peripherals and advanced features of the HCS08 core, including extended battery life with a maximum performance to 1.8V. It is a useful solution for power and size-sensitive applications, such as wireless communications and handheld devices, small appliances, Simple Media Access Controller (SMAC)-based applications and toys.

- Multi-axis sensing using an XYZ-axis low g acceleration sensor, MMA7260QT with selectable g-ranges of 1.5g/2g/4g/6g, combined with the MC9S08QG8 8-bit microcontroller
- 2.4 GHz wireless communication is enabled by the RFCMOS technology. The MC13191 is one of the pin-to-pin compatible series of transceivers - the MC13192 supports the IEEE 802.15.4 protocol - the MC13193 supports full ZigBeeTM compliant applications
- The USB 2.0 with the 8-bit MC68HC908JW32 full speed chip offers plug and play benefits

Sentec Wireless Comms. Zebra Kit & Modules

Starter Kit Hardware Features:
- Contains 2 modules, 2 base boards and detailed documentation
- 2 Wireless communication modules PCB size 85 mm x 75 mm
- Power supply on-board or optional external 2.0V to 3.4 V required
- 4 LEDs, 4 Buttons, 4 channel DIP Switch
- RS 232 serial interface on-board
- BDM Port included
- Large breadboard area for individual application
- Metrowerks CodeWarrior integrated development environment included
- Several software options ready for use

ZigBee Zebra 24xx modules
- Wireless communication module for use in embedded applications
- Worldwide available 2.4 GHz frequency band: 2.4000 - 2.4835 GHz
- 16 channels with 5 MHz spacing not overlapping
- Direct Sequence Spread Spectrum DSSS
- Gross data rate 250 kbps
- Antennas integrated on the module
- Freescale MC13192 RF or MC13213 front end
- Freescale HCS08 base band controller with 60 kByte flash
- 50 pins HIROSE connector or BGA SMT footprint
- Operating voltage 2.0 - 3.4 V
- Mechanical dimensions 16 mm x 33 mm with metallic shielding
- Several software options, including ZigBeeTM network stack
- Link range up to 100 m depending on the actual environment
- ZEBRA 241x: RF output power 10 dBm 10mW, receiver sensitivity -97dB & on board PA & LNA

ZENA Network Analyser Tool & Software

New

The ZENA™ tool is a wireless network analyser that graphically displays wireless network traffic following the IEEE 802.15.4™ specification on the 2.4GHz band. It supports both the ZigBee™ and MiWi™ protocols. In conjunction with the hardware packet sniffer, the software can analyse complete network traffic and graphically display decoded packets. It can also display a graphical representation of the network topology and the messages as they flow through the network. This information can then be saved and/or exported for further analysis.

The Software Enhanced CDROM for the ZENA Network Analyser (DM183023) provides the same functionality as the software delivered with the ZENA Wireless Network Analyser, with the additional capability of decoding secure network packets when provided with the network key. This capability allows developers to debug secure networks during development.

MRF24J40MA 2.4GHz IEEE 802.15.4 Transceiver Module

New

The MRF24J40MA is a 2.4 GHz IEEE 802.15.4 radio transceiver module. The MRF24J40MA has an integrated PCB antenna, matching circuitry, and supports the ZigBee™, MiWi™ and MiWi™ P2P protocols. The MRF24J40MA module can connect to many popular Microchip PIC® microcontrollers and is an ideal solution for wireless sensor networks, home automation, building automation and consumer applications.

Features:
- FCC (USA), IC (Canade), ETSI (Europe) Certified
- Simple four-wire SPI interface to PIC® microcontroller
- Integrated 20 MHz and 32.768 kHz oscillator drive
- Low current consumption
- Hardware CSMA-CA Mechanism
- Hardware security engine (AES-128)

AC163028 PICDEM Z RF Board

New

This PICDEM Z 2.4GHz Radio Frequency Board uses the NEW agency-certified MRF24J40MA IEEE 802.15.4 RF transceiver module. The module is attached to the carrier board with a 12-pin modular connector allowing the RF Board to be used with the current PICDEM Z development kit or as a production module to wirelessly enable customer designs. Targeted for ZigBee, MiWi, and MiWi P2P wireless protocol applications, it is a perfect solution for low-cost, low-power complete embedded wireless PAN applications.

Features:
- 2.4 GHz IEEE 802.15.4 Transceiver Module
- Supports ZigBee™, MiWi™, and MiWi P2P protocols
- FCC (USA), IC (Canade), ETSI (Europe) Certified
- Integrated PCB Antenna with:

- Simple four-wire SPI interface to PIC® microcontroller
- Integrated 20 MHz and 32.768 kHz oscillator drive

- Low current consumption
- Hardware CSMA-CA Mechanism
- Automatic ACK response
- Hardware security engine (AES-128)
- Automatic packet retransmit capable

PICDEM™ Z

ZigBee™ Technology Demonstration Kit

The PICDEM™ Z 2.4GHz Demonstration Kit supports the ZigBee standard protocol for wirelessly networked control and monitoring applications. It is an easy-to-use evaluation and development platform which includes all the hardware, software source-code and printed circuiut board layout files needed to rapidly prototype wireless products. The PIC-DEM Z platform uses integrated nanoWatt Technology power managed modules, along with advanced analogue, control and com-munications peripherals. The kit includes two PIC-based Motherboards, two 2.4GHz RF Boards and Protocol Stack Software.

- 64KB of self-programmable Flash program memory
- Compatible with Windows 98/Me/2000/XP via serial port
- ZigBee protocol stack source code CD-ROM
- PICDEM Z User's Guide CD-ROM
- Online support available

E-blocks Zigbee Boards

Co-ordinator & Router

New

The E-blocks Zigbee board uses a V2 XBEE module that allow connection to one or more E-blocks systems together using the new Zigbee (wireless area network) standard, or to connect your system to a third party Zigbee system. The modules used are compliant with the 2007 Zigbee Pro standard. Flowcode macros for this E-blocks board are available.
Due tothe nature of the Zigbee standard there are two different boards:
The **EB051R** is preprogrammed to behave as a router node in a Zigbee system.
The **EB051C** is preprogrammed to behave as a co-ordinator node in a Zigbee system.

Features:

- Create a wireless sensor network using E-blocks
- Flowcode macros available

CYWUSB6953 WirelessUSB™ PRoC™ Flash MCU + Radio

The CYWUSB6953 is a complete Radio System-on-Chip device, which enables many simple RF systems to be implemented with a single device and a handful of discrete components. The CYWUSB6953 is designed to implement low cost wireless systems operating in the worldwide 2.4-GHz Industrial, Scientific, and Medical (ISM) frequency band (2.400 GHz-2.4835 GHz). The microcontroller is a powerful mixed-signal array, based on the M8C 8-bit engine.

MCP5200 Features:

- 16K Instruction and 16K Data Caches
- 10/100 Ethernet MAC
- Peripheral Control Interface (PCI) Version 2.2
- ATA/IDE Interface
- USB 1.1 Host (two each USB 2.0 compatible)
- Programmable Serial Controllers (six)
- Serial Peripheral Interface (SPI)
- I2C (two)
- I2S (up to three)
- CAN 2.0 A/B (two)
- 8 Timers

Wireless RF Solutions

AMB8420

AMB2520

The **AMB8420** (868MHz) & **AMB2520** (2.4GHz) are compact and low-cost radio data transmission modules for wireless half-duplex communication. The integrated microprocessor controls data communication, handling packet and checksum formation, addressing, monitoring of channel access and resending unreceived packets. The host system does not have to perform any radio-specific tasks. The modules can be configured in many ways and supports data transfer with fast channel and address switching.

New

Features:

- Integrated software stack with extensive functions
- Flexible addressing with up to 255 nodes in 255 networks
- Complies with requirements in R&TTE Directive 1999/5/EC
- Integrated ceramic aerial, optional: external aerial connection

RL Re-reeling available

Communications - ZigBee (IEEE 802.15.4) / ISM - continued

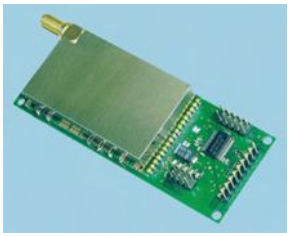
Wireless RF Solutions - continued

AMB8460

AMB2560

The **AMB8460** (868MHz) & **AMB2560** (2.4GHz) are variations of the radio modules AMB8420 & AMB2520. They make for an easy connection to the PC via the USB interface. In combination with the relevant radio technology in the end device, these solutions enables quick and simple realisation of PC supported radio networks and can be used, for example, for data collection or control tasks.

Features:
- Communication via a virtual COM port
- Integrated software stack with comprehensive range of functions
- Flexible addressing and network topologies with up to 255 nodes in 255 networks
- Configurable data rate and transfer channel

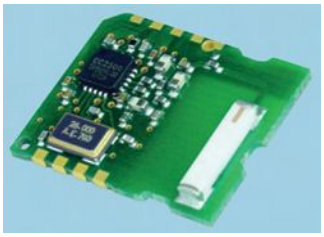


AMB8423

The **AMB8423** radio module is the 868/915 MHz version of the TI Tools eZ430-RF2500 2.4GHz radio module. It differs to the 2.4 GHz solution only in the RF chip and in the antenna. All other functions of the boards as well as the interface are identical.

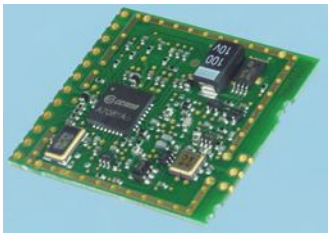
Features:
- Over the Air Data rate up to 250Mbps
- Interface data rate Up to 256 kBaud (UART)
- Usable with SimpliciTI™
- Range Up to 300 M
- For Development use

AMB8350



AMB8355

The **AMB8350** operates in the ISM 868 MHz band and is a high performance wireless modem providing a reliable low cost serial data communications link that can be used for many data communications applications. The RF modem is very simple to use and provides a wireless RS232 link with a RF data rate of up to 57.6 kbps.



The **AMB8355** Long Range Radio Modem provide an easy-to-use, long range, multi-channel serial data communications link for a range of up to 20 km at line of sight or up to 3 km indoors. The modem transmits and receives half duplex serial data at rates of 1.2 kbps to 19.2 kbps (over-the-air data rate) by means of a FM Radio Transceiver operating in the 868 MHz frequency band.

AMB8400

AMB2500

AMB8310

The **AMB8400** (868MHz) & **AMB2500** (2.4GHz) are compact and low-cost transceiver modules for wireless communications. Integrated functions include automatic appending and checking of a 16-bit checksum, address analysis and the option of using Forward Error Correction in combination with interleaving, take much of the work from the host system in handling radio-specific tasks. The **AMB8310** radio transceiver module provides reliable wireless communications for the transfer of data at rates of up to 57.6 kbps and operates within the frequency bands of 868 MHz to 870 MHz. Transmission is being effected in the robust FM/FSK modulation. The module is programmable via an SPI interface.

AMB2300

AMB2130

The **AMB2300** BlueNiceCom IV module (BNCIV) is a completely integrated Bluetooth solution, containing a Bluetooth radio (LMX9830), antenna and a fully implemented software protocol stack. The module provides reliable Bluetooth data communication links as well as AUDIO communication links. The module features point-to-point and point-to-multipoint link management supporting data rates up to 704 kbps. The internal memory supports up to seven active Bluetooth ACL links (data) and one SCO link (AUDIO). BlueNiceCom IV is supplied with an onboard chip antenna.
The **AMB2130** radio module allows wireless networks based on the IEEE 802.15.4 and ZigBee standards to be set-up. It is also a powerful and flexible platform for proprietary radio solutions. The integrated power front end (with LNA and PA) can send data wirelessly at distances of up to 400 metres in line of sight. In conjunction with a suitable software stack complex network solutions including routing functions can also be realised.

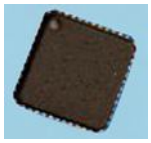
nanoPAN RF Modules

nanoPAN 5360
This high-speed RF module contains the complete RF-part of a nanoNET network node and provides an asymmetrical 50 antenna port. The data rate is selectable between 500 kbps, 1 Mbps, 2 Mbps. The nanoPAN 5360 module contains an additional ISM band pass filter to ensure an even improved robustness.

Features:
- max output power: 6dBm
- sensitivity: -90 dBm (@BER = 10-3 and 1Mbps)
- ISM band pass filter
- 36 pins

Applications:
- Active RFID
- Industry applications
- Smart home networks
- Alarm Systems
- Multimedia



nanoPAN 5361
This RF module is unlike the nanoPAN 5360 not equipped with a band pass filter, and thus achieves a higher output power and better receiver sensitivity.

Features:
- max output power: 8dBm
- sensitivity: -92 dBm (@BER = 10-3 and 1Mbps)
- range: 60m (indoors), 900m (free space)
- 36 pins

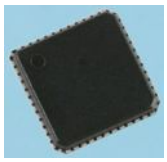
nanoNET TRX Transceiver Chipset



The nanoNET TRX is a fully integrated, energy-efficient transceiver. The chip operates in the license-free ISM Band and, based on the patented CSS technology (Chirp Spread Spectrum), generates so called Up- and Downchirps with a symbol duration of Tsymbol = 1µs and an effective bandwidth of 64 MHz.
Only few external components are necessary to set up a fully functioning wireless node. Even very slow microcontrollers can be used with this high speed transceiver.
The network is extremely robust against multi-path-fading. Due to the mainly analogue signal processing and the robust Chirp signal, the nanoNET TRX requires very little energy per successfully transmitted bit.

Features:
- Programmable support block (RTC, Wake-UP Circuitry, Power Management)
- Programmable digital controller for communication with an external digital controller via SPI
- MAC controller
- Forward Error Correction
- 128 bit encryption
- Supply voltage: min 2.4V & max 3.6V
- Max output power without PA: 8 dBm
- Max. data rate: 2 Mbps
- Sensitivity: - 92 dBm
- Effective bandwidth: 64 MHz
- Operating temp.: - 40 to +80°C
- Package: MLF 44Pin 7x7 lead-free
- Range: 60m (indoors), 900m (free space)

nanoLOC TRX Chipset

The nanoLOC TRX is a highly integrated mixed signal chip utilizing the patented CSS (Chirp Spread Spectrum). It generates a flexible and noise-resistant signal and enables distance measurement between two wireless nodes. The IC is thus perfectly suited for localization applications, RFID and RTLS networks (Real Time Location Systems). Even very slow microcontrollers can be used with this high speed transceiver.
s ranging is performed during regular data communication, additional infrastructure, power and/or bandwidth is not required.
nanoLOC supports freely adjustable centre frequency with three non-overlappingfrequency channels. This provides support for multiple physically independentnetworks and improved coexistence with existing 2,4 GHz wireless technologies.

Features:
- Forward Error Correction
- 128 bit encryption
- integrated MAC Controller
- SPI Interface
- Max. data rate: 2 Mbps
- Range without PA: (indoors, outdoors and free space) for EIRP = 1 mW (PEP): 10m, 100m, 300m
- Accuracy: ≤ 1m
- Operating temp.: - 40 - +80°C
- Package: VFQFPN-48 7x7

Applications:
- industry
- logistics
- RTLS
- Security

nRF9x5 Development Tools

The nRF9x5-EVKITs are made for low cost evaluation & development. Programming and set up is performed via a PC USB interface. All I/O pins of the devices are available on external connectors, and the evaluation boards are built up of an RF module connected to a carrier board.

nRF9E5-EVKIT:
Two boards with nRF9E5 transceiver
- Connectors for ADC interface
- Connectors for Digital I/O and peripherals
- 4 push buttons for user input
- 4 light diodes for output
- Temperature sensor for ADC/range evaluation
- SMA connector for antenna
- Two antennas for SMA connector

Two PC interface boards:
- Connects to nRF9E5-EVBOARD
- Connects to PC USB port

CD-ROM with software and documentation:
- PC interface SW
- Example programmes
- Support for 3rd party development tools:
- Assemblers
- Linkers
- Compilers
- Debugger

nRF905/9E5 - Multiband Transceivers

nRF905/9E5 are single-chip radio transceivers for the 433/868/915 MHz ISM band. The transceivers consists of a fully integrated frequency synthesiser, receiver chain with demodulator, a power amplifier, a crystal oscillator and a modulator. Configuration is easily via the SPI interface. Current consumption is very low and built in power down modes makes power saving easily realizable.

nRF9E5 integrates a 8051 compatible microcontroller and a 4 input 10bit 80ksps AD converter. The circuit has embedded voltage regulators, providing maximum noise immunity. Additionally, the nRF9E5 is suitable for frequency hopping, has low MCU current (1mA, @ 3V, 4MHz typ), with 2.5uA stabdby with wakeup on timer or external pin.

Features:
- ShockBurst™ mode for low power operation
- Multi channel operation - ETSI/FCC Compatible
- Channel switching time <650µs
- No external SAW filter
- Adjustable output power up to 10dBm
- Carrier detect for "listen before transmit" protocols
- Data Ready signal when a valid data package is received or transmitted
- Address Match for detection of incoming package
- Automatic retransmission of data packages
- Automatic CRC and preamble generation
- Low supply current (TX), typical 11mA @ -10dBm output power
- Low supply current (RX), typical 12.5mA
- Power supply range 1.9 to 3.6V

Nordic Transmitters & Transceivers

New

The nRF24AP1 is a drop-in wireless communications solution that provides private and public network connectivity and eliminates the need to purchase third party protocol stacks and acquire standards certification through expensive acceptance testing.

Features:
- Designed for Coin Cell Battery operation
- Uni-directional and bi-directional channel support
- Channel method: TDMA
- 232 addressable devices
- Message rate > 200 messages per second
- Data validity detection: 16 bit CRC
- Adaptive channel communications
- Data security and immunity from cross-talk
- Supports star and peer-to-peer networks
- Private and public networking capability
- 125 channels
- 1.9 - 3.6V voltage supply

The nRF24Z1 gives the user a true single chip system for CD quality audio streaming of up to 16 bit 48 kHz audio with support of up to 24 bit 96 kHz input.

Features:
- 4Mbit/sec RF link - true lossless audio
- Adaptive frequency hopping
- Programmable latency
- Quality of Service (QoS) engine supporting up to 1.536 Mbit/sec LPCM audio
- S/PDIF interface for direct connection to PC soundcard and surround receivers
- I2S interface for glueless audio support
- SPI or 2-wire interface for up to 12kbit/sec peak
- bi-directional digital control/AUX data
- On chip optional 2:1 compression
- On chip voltage regulators

The nRF24E2 is based on the market leading nRF2402. The most sophisticated low cost 2.4GHz ISM wireless component is paired with the industry standard 8051 MCU core, and leading peripherals to create the worlds first complete low cost System on Chip (SoC) IC's for global 2.4GHz operation.

Features:
- Internal voltage regulators
- Ultra low current drain standby and operation
- Internal VDD monitoring
- Multi Channel operation
- 125 channels
- Supports frequency hopping
- Channel switching time <200us
- Address and CRC computation
- Shock Burst mode for ultra-low power operation
- RF tested

The nRF2402G is a highly integrated component for wireless communication manufactured in an ultra modern 0.18mm CMOS process. The entire transmitter including all inductors and filters is integrated in a single chip that gives the lowest cost solution to the end user.

features:
- Multi Channel operation 125 channels
- Supports frequency hopping
- Channel switching time <200μs
- Power supply range: 1.9 to 3.6 V
- Address and CRC computation
- Shock Burst mode for ultra-low power operation
- Low supply current (TX), typical 10mA @ -5dBm output power
- RF tested
- Complements the nRF2401 transceiver

The nRF401G is a true single chip UHF transceiver designed to operate in the 433MHz ISM (Industrial, Scientific and Medical) frequency band. It features Frequency Shift Keying (FSK) modulation and demodulation capability.

Features:
- True single chip FSK transceiver 433MHz
- Few external components required
- No set up or configuration needed
- No coding of data required
- 20kbit/s data rate, 2 channels
- Wide supply range
- Very low power consumption
- Standby mode

nRF403G is a true single chip UHF transceiver designed to operate in the 315/ 433 MHz ISM frequency band. It features Frequency Shift Keying (FSK) modulation and demodulation capability.

Features:
- True single chip FSK transceiver
- Few external components required
- No set up or configuration
- No coding of data required
- 20kbit/s data rate
- 315/ 433 MHz operation
- Wide supply range
- Very low power consumption
- Standby mode
- +10dBm RF output power

nRF2401/nRF24L01 Single chip GFSK 2.4Ghz Transceiver

These are single chip radio transceivers for the world-wide 2.4 - 2.5GHz ISM band. The transceivers consist of a fully integrated frequency synthesizer, a power amplifier, a crystal oscillator, and a modulator.
The nRF24L01 also consists of a demodulator and an Enhanced ShockBurst™ protocol engine.

Output power, frequency channels and protocol setup are programmable through a SPI/3-wire interface.

Power Supply range is specified at 1.9 to 3.6V with low current consumption, built-in Power Down and Standby modes making power saving realizable.

nRF2401 features:
- Only 2 external components
- Multi channel operation
  - 125 channels
  - Channel switching time <200µs
- Support frequency hopping
- Data slicer / clock recovery of data
- Address and CRC computation
- DuoCeiver™ for simultaneous dual receiver topology
- ShockBurst™ mode for ultra-low power operation and relaxed MCU performance
- No need for external SAW filter
- QFN 24-pin

nRF24L01 features:
- Complete OSI Link Layer in hardware
- Enhanced ShockBurst™
- Auto ACK & retransmit
- Address and CRC computation
- Digital interface (SPI) speed 0-8 Mbps
- 125 RF channel operation
- Short switching time enable frequency hopping
- Fully RF compatible with nRF24XX
- 5V tolerant signal input pads
- Uses ultra low cost +/- 60 ppm crystal
- QFN 20-pin

nRF24E1 - System on Chip with 8051 MCU

The nRF24E1 transceiver with embedded 8051 MCU, 12-bit ADC, and peripherals is a complete wireless ISM band platform. The sophisticated 2.4GHz ISM wireless component, based on the nRF2401, is paired with the industry standard 8051 MCU core and leading peripherals to create a System on Chip (SoC) for global 2.4GHz operation. The entire radio, 8051 MCU, 9 channel 12 bit ADC, peripherals, inductors and filters, are integrated on a single die. Only external crystal, resistor, and a 4KB EEPROM for initial program storage are needed to make a complete system.

Features:
- 8051 compatible microcontroller
- 9 input 10 bit ADC 100Kspls/s
- Internal voltage regulators
- Ultra low current drain standby and operation
- Internal VDD monitoring
- Data rate 0 to1Mbps
- Multi Channel operation 125 channels
- Support frequency hopping
- Channel switching time <200us.
- Power supply range: 1.9 to 3.6 V
- Address and CRC computation
- Shock Burst™mode for ultra-low power operation

RFID Reader IC & Study Kit

Supporting I-code and Tag-it protocols, the **TRH031M** reads ISO/IEC 1443 type A and B, as well as ISO 15693 standards. It has an operating range of 10cm for ISO/IEC14443A/B and up to 150cm for ISO 15693.
The **RSK-100** AnyRead™ Educational Kit is developed to enhance understanding and to educate RFID technology to OEMs, developers, educators, reader manufacturers & system integrators. It includes an EV-100 evaluation board (with TRH031M, Atmel AT89C51E 8-bit microcontroller, RS-232 communication DB-9 port, LCD display, antenna, and regulated dc power supply), WinXP/2K-compatible software, power supply, cables, three TRH031M ICs, and four RFID tags (14443 and 15693 standards)

RFID Tag/Card

The TTH75D02 is a high performance and relaible RFID Tag that is fully compatible with ISO 15693

Features:
- RF Interface compatible ISO 15693
- Operating frequency: 13.56MHz
- Operating distance: Up to 1.5m (Gate width)
- Fast Data transfer: 26.5Kbits/s
- High data integrity: 16bits CRC, framing
- Anti-collision
- Electronic Article Surveillance (EAS)
- Application Family Identifier (AFI) supported
- Additional fast read/write mode
- 2Kbits EEPROM, organized by 64 blocks of 4 byte each
- Data retention of 10 years
- Write endurance 100,000 cycles

nDolphin RF Digital Lock Kit

The nDolphin is a new name in RF digital locks, which allows Implementation of 13.56MHz RFID technology.
It is both durable and reliable with dual stainless lock features. Due to minimised power consumption it has a long lasting battery life and is also user friendly for both customers and administrators.

Features:
- Automatic lock feature
- External emergency power source for battery exhaustion
- Signal alert for battery exchange (Approx. 40x use after first signal alert)
- Signal alert for irregular locked door
- Signal alert for forced breakage
- Easy security restrictions
- Functions as locker handle

RFID Development Kits

ATA2270-EK1

ATAK2270

TMEB8704

ATAK2270UG

3 different types of RFID development and evaluation kits are available. Two of them, TMEB8704 and ATAK2270, are PC based and come with PC software. The difference between these two kits is the type of LF-RFID tags supported (See table below).
The third kit, ATA2270-EK1, is a new generation of kit and is stand-alone. Buttons and joystick on the PCB are used to operate the kit. A display and a beeper complete it.

An upgrade kit (ATAK2270UG) from TMEB8704 to ATAK2270 is also available.

Supported RFID IC Devices	TMEB8704	ATAK2270	ATA2270-EK
T5551/TK5551	✓	✓	✓
e5530/TK5530	✓	✓	✓
T5552/TK5552	✓	✓	—
T5554	✓	✓	✓(1)

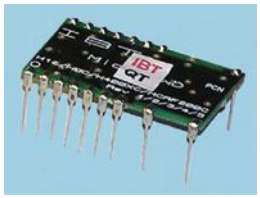
RFID OEM Mifare Reader

New



The OEM-MIFARE Reader Board is a complete Mifare 1k, 4k and Ultralight reader system including PCB antenna, LEDs and MAX202 for RS232 communication. This board is the RWD-MIFARE module design laid out inside a PCB track antenna and it functions in exactly the same way as the module with an antenna fitted. The design incorporates 5-volt supply filtering to ensure optimum performance, antenna-trimming capacitor to adjust tuning for different environments and has several connector options with all the control signals, TTL level serial and ±12-volt RS232 signals available.

Features:
- Supports Mifare, ICODE and Ultralight Protocols (© Philips Semiconductor)
- Up to 10cm range on 13.56MHz
- Fast Baud rates up to 106K Baud
- Supports Read/Write to Transponders

RFID Passive Tag Solutions

130-4028

130-4030

130-4032

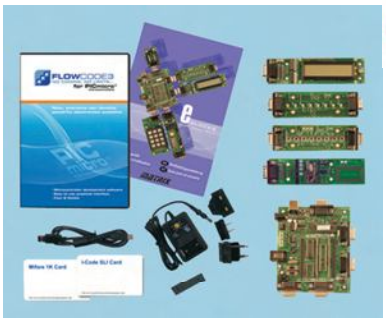
A range of 'Smart' contactless identification products for OEM Applications.
Ready to operate for easy integration these modules, feature a variety of coprocessor, security technology for highly integrated low cost SmartCard solutions.
The MicroRWD chip module is a complete RF transponder / contactless smart card reader /writer system on a module and represents one of the smallest and lowest cost solutions currently available. A complete solution requires connection to the coil Antenna and provides a serial data interface (RS232 at TTL level)

RWD SmartCards:
- Credit Card Size
- ISO Passive Cards Programmable w/ Eval Kit

RFID Coil Antenna:
- Pre tuned antenna
- Connects Directly to RWD Module to complete system

RWD SmartCard Reader/Writer module:
- Tag Reader / Writer Module
- Performs All Read / Write functions
- Simple RS232 Interface
- Hitag / Mifare / EM Marin Protocols
- 24pin DIL PCB Mounting Module

Applications:
- Access Control
- Contactless switching
- Product ID, Tracking, Logging



Universal Eval Kit:
The Universal Eval Kit provides a "ready-to-use" RFID reader system for development and evaluation of an RFID system.The kit includes:
RFID reader unit
RWD-QT Module
RWD-MIFARE module
CARD-MIFARE
CARD-HITAG1S
CARD-HITAG2
CARD-EM4102
External 125KHz Coil Antenna
Enclosure of Reader Unit
CD Rom containing data sheets and Windows applications (executable and C source)
The RFID reader has an integrated antenna and can accept any of the RWD modules to realize an RFID application for Mifare, Hitag 1, 2 , EM Marin, protocol with a USB output to interface to a PC.

EB539 Easy RFID Pack

matrix multimedia

New

This bundle includes everything needed to rapidly develop RFID based systems linked to microcontroller hardware. It includes a copy of Flowcode V3 professional, an E-blocks PICmicro microcontroller USB multiprogrammer, LCD board, LED board, switch board, RFID board, power supply, two Mirfare type RFID cards, two I-code SLI type RFID cards and a spare 16F877A device. Flowcode macros for rapid RFID development are included.

Features:
- Rapid development of RFID based systems
- Includes a full copy of Flowcode
- Ideal for learning and project development

E-blocks RFID Board

matrix multimedia

New

This E-blocks RFID board allows easy incorporation of RFID tags into an electronics system. The board includes an RFID module that communicates to Mifare, Icode and Ultralight cards at a distance of up to 10cm using the onboard antenna at frequencies of 13.56MHz. It has also been designed for use with Hitag type cards operating at 125KHz (with external antenna - not supplied).
This board only operates with a 5V supply and is supported by Flowcode macros for reading and writing data to and from cards and tags.

Features:
- Mifare, Icode and Ultralight compatible
- On-board antenna
- 2 Mifare and 2 Icode cards supplied
- Flowcode macros available

rfPIC Development Kit

The rfPIC Development Kit 1 provides design engineers with an easy way to evaluate unidirectional remote sense and control wireless links based on the rfPIC12F675 and rfRXD0420/0920 devices. The kit is based on the popular PICkit™ 1 FLASH Starter Kit and consists of modular building blocks for different transmitters and receivers that can be utilized for prototype systems or to evaluate different options using Microchip products.

Contents:
- PICkit™ 1 FLASH starter kit
- 433.92 MHz transmitter
- 315 MHz transmitter
- 433.92 MHz receiver
- 315 MHz receiver
- rfPIC software and complete documentation (on CD)

System Requirements:
The supported operating systems are Windows 98 Second Edition, Windows ME, Windows 2000 and Windows XP.

MCP2140 IrDA Wireless Temp Demo Board

Features:
- Demonstrates the MCP2140 IrDA Protocol Controller in a data logging application
- Communicates directly to a laptop computer, Palm or Pocket PC PDA
- Primary device application programs are provided to demonstrate operation (for PC, Palm OS, Pocket PC)
- Demonstrates the MCP2140 IrDA Protocol Controller in a data logging application
- F/W routines transmit TC1047A temperature and other data to a primary device (i.e., Laptop, PDA)
- Reprogrammable PIC18F1320 with ICSP™ (In-Circuit Serial Programming™) interface and ICD header
- Operates on 3 AAA alkaline batteries

The MCP2140 IrDA Standards Wireless Temp Sensor Demo Board demonstrates the MCP2140 device in a real world application. The system designer can use this design as an example of how to integrate an IrDA standard port in their system.

Features:
- Demonstrates the MCP2150 IrDA Protocol Controller in a data logging application
- Communicates directly to a Laptop computer, Palm or Pocket PC PDA
- Primary Device application programs are provided to demonstrate operation (for PC, Palm OS, Pocket PC)
- F/W routines transmit data to a Primary Device (i.e., Laptop, PDA)
- LCD display indicates system state
- Reprogrammable PIC16F877 with ICSP™ (In-Circuit Serial Programming™) interface and ICD header
- Interface Header allows board to be interfaced to a prototype system application
- Header allows other Optical Transceiver circuits to be interfaced to the MCP215x device
- Operates on 9V DC input or a 9V battery

MCP212X Developer's Daughter Board

The MCP212X Daughter Board is used to evaluate and demonstrate the MCP2122 or the MCP2120 IrDA® Standard Encoder/Decoder devices.
It is designed to interface to several of the PICmicro Demo Boards. These include the PICDEM HPC Explorer Demo board, the PICDEM FS USB Demo board, and the PICDEM LCD Demo board.

Features:
- 8-pin socket for installation of MCP2122 (installed) and 14-pin socket for installation of MCP2120
- Headers to easily connect to the user's embedded system
- Jumpers to select routing of MCP212X signals to the PICDEM™ Demo Board Headers
- Jumpers to configure the operating mode of the board

IrDA Controller ICs

The MCP2120 is a stand-alone IrDA Encoder/Decoder designed to fit between a UART and infrared transceiver, this device is capable of the modulation and demodulation of data to the IrDA standard. The MCP2150 is a complete IrDA communications Controller which provides support for the IrDA protocol "stack" plus bit encoding/decoding. Both devices are capable of supporting IrDA communications upto 115.2 kbaud.

KEELOQ Evaluation Kit

KeeLoq HCS410 300-2883

KeeLoq Evaluation Kit 386-6403

The kit demonstrates the capabilities of Microchip's code hopping technology. The encoder devices are designed to be the transmitter portion and the decoders as the receiver portion to a keyless entry system.

Typical applications for the Keeloq devices include:

- Keyless entry
- Security systems
- Garage door openers
- Central locking systems
- Transcation cards
- Immobilizers
- ID tokens
- Electronic tagging
- Passive transponders

and many more...

The Evaluation kit includes the necessary hardware to evaluate code hopping system and demonstration software program on 3.5" disk.

The code hopping encoders feature:

- Programmable 28/32-bit serial number
- Programmable 64-bit encryption key
- Each transmission unique
- Encryption keys are read protected

Supplied with a universal power supply. UK or International power supply optional. UK or European mains plug lead available separately.

YT-3000 YETI Programmable Walking Robot

AREXX

High-tech "YETI" build it yourself Mobile Robot

YETI is a walking robot, fully programmable in C, for Windows® and Linux systems. It is very much suitable for hobby and educational purposes such as robotic school projects, training at the job and further courses in the electronic and mechanic field. It is supplied as a complete construction kit with programming software (compiler, editor & upload tool), two servos, RS-232 IR-Tranceiver, LEDs and Beeper.
The YETI walking robot can be programmed by PC wirelessly throught the supplied Duplex IR-Transceiver.

Experiment with walking, turning, dancing and running movements, etc. The software library supports you with walking functions and IR-communication functions with extensive source code documentation in the English language. This walking robot can be controlled by computer through infrared signals and by a regular TV IR-remote control. Upgradable by means of I²C-Bus System with the following upgrade and experimental kits:

YT-EXP1 Experiment Set:
With this Experiment Set YT-EXP1 you can make your own electronic circuit for YETI.

YT-DSP2 Display Set:
The Display YT-DSP2 shows you all current YETI data.

YT-ULT3 Ultrasonic Set:
With this Ultrasonic Set YT-ULT3 you can let YETI avoid obstacles and measure distances.

Further information:

- Power supply: 4 x AA (not included)
- Power consumption: min. 10 mA / max. 600 mA

Communications - Radio / Remote Control

ARF18 Remote Control Demonstration Kit

Bi-Directional - 869MHz

The main functions of this kit include evaluating ADEUNIS RF products, measuring RF and developing a prototype-.Data can be transfered from one PC to another, this enables the user to quickly find out how well the Adeunis-RF products fit the intended application.Using a PC, the radio module can be configured with parameters that suit the intended application and easily measure sensitivity, output power and other RF parameters.It has chip/strip board areas as well as direct access to all the radio modules signals permitting easy addition of additional components for evaluation purposes.

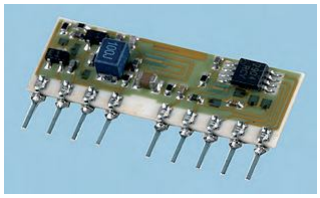
AM Super Heterodyne Receiver Module

New

This AM Superheterodyne Receiver can be used to capture undecoded data from any equivalent AM Transmitter.
The RRS3 is manufactured on a ceramic substrate and incorporates an LC Filter, pre amplifier front-end & PLL Synthesizer for high sensitivity and reduced EMC emissions.
It shows a very high frequency stability over a wide operating temperature even when subjected to mechanical vibrations or manual handling.

Features:
- Receiving Range Up To 100 Metres
- CMOS/TTL Compatible Output
- Compatible with R.F. Solutions AM Transmitters
- Compliant to ETS300-220
- Sleep Mode



Supply Voltage (Vcc)	5V
Supply Current	5mA
Receiver Frequency 433MHz	433.92MHz
Low Level Output Voltage (I=10uA)	0.8V
High Level Output Voltage (I=200uA)	Vcc-1
Operating Temperature Range	-25 to 80°C
R.F Sensitivity (100% AM) @ 433MHz	-106dBm
3dB Bandwidth	±150KHz
Level of Emitted Spectrum	-70dBm

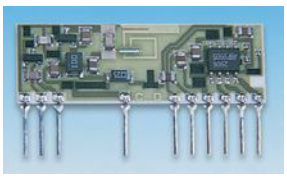
433MHz AM Miniature SuperRegen Receiver Module

telecontrolli

This module shows very high frequency stability over a wide operating temperature even when subjected to mechanical vibrations or manual handling.

A unique patented laser trimming process gives a very accurate on-board inductor removing the need for any adjustable components.



- 50% smaller than other RF modules (25.4mm x 9mm)
- Very high frequency stability (with no adjustable components)
- -100dBm typical sensitivity
- Up to 50 metres range
- CMOS/TTL compatible output
- Low current consumption
- Patented laser trimmed inductor
- Compliant to ETSI300-220

A.M. Receiver Modules

Regenerative

Heterodyne

These miniature hybrid RF receivers can be used to capture any undecoded data from any 433MHz AM Transmitter.

The modules contain no adjustable components for ultimate reliability. The manufacturing process employs laser trimmed components for increased sensitivity and reliability. Hence these modules show a very high frequency stability over a wide operating temperature even when subjected to mechanical vibrations or manual handling.

The super-heterodyne receiver manufactured on a ceramic substrate incorporates a SAW Filter front end for reduced EMC emissions, and uses an IF stage at 500kHz.

- Miniature hybrid R.F. receivers to capture data from 433MHz A.M. transmitters
- Low current consumption
- Laser trimmed inductor gives extremely high frequency sensitivity and stability
- Front end pre-amplifier reduces EMC emissions from the antenna
- CMOS/TTL compatible output
- Receiving range:- Super Regenerative 45m
  Super Heterodyne 75m
- Requires no radio license to operate
- ETSI300-220 Compliance (Super Heterodyne)

Transmitter and Receiver Modules

'Radiometrix'

Transmitter

Receiver

Pin spacing=2.54, PCB hole dia.=0.7

- Transmission distance up to 200 metres
- Analogue and digital input/outputs
- 418MHz or 433MHz SAW controlled-wide band FM transmission
- 10Kbps data bandwidth
- Small size, PCB mounting SIL package
- Range up to 200 metres(300 metres 433MHz)

The Radiometrix radio transmitter and receiver modules are self contained, PCB mounting and capable of transferring analogue and digital data up to a distance of 200 metres. The modules are suitable for general purpose telemetry and remote control applications where small size and high data rates are required. Typical applications include domestic and commercial security, lighting control, garage door openers, remote control and access control.

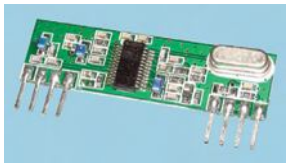
Low Cost AM Radio Modules

QUASAR



QAM-TX1

QAM-TX3

QAM-RX2

QAM-RX4

The Quasar UK range of AM Radio modules provides complete RF transmitter and receiver radio modules which can be used to communicated data at up to 3KHz between CMOS/TTL devices.
The modules are very simple to operate and offer low current consumption, allowing for extended battery life when used in mobile applications. Data can be supplied directly to or from a microprocessor or encoding device, thus keeping the component count down and ensuring a low hardware cost.

Transmitter Modules
- Through hole/SMT packages
- SMT miniature package 11 x 8 x 3mm
- Low power consumption
- Range up to 50m
- No adjustable components
- Very stable operating frequency
- Wide operating voltage (1.5 - 5V)

Receiver Modules
- CMOS/TTL output
- Low power consumption
- No adjustable components
- Very stable operating frequency

Applications
- Wireless security systems
- Remote gate controls
- Remote sensing
- Data capture
- Garage door controller

AM Transmitters & Recievers for Embedded Radio Control

433.92MHz

A range of miniature pocket keyfob encoders, housed in tough ABS enclosures and supplied with battery ready to operate. The overlay sticker can be customised to users' graphics etc.
The transmiters use Keeloq algorithm which provides the highest level of security available. Each time the transmitter is operated it transmits a unique 67bit word which is never repeated even if the battery is changed.
The receiver decoders are available as either AM, AM Low Power or Dual-in-Line package with relay output.
The receivers use a ceramic technology receiver with an embedded 'flash' programmable microcontroller decoding a highly secure Keeloq protocol. This provides a complete remote telemetry system with up to 100 metres range.
The receivers have an easy-to-use 'Learn' facility are are capable of learning up to 50 unique keyfob transmitters.
The receiver operates from a 5V supply, and provides four digital data outputs (momentary or latching operation), a serial data output and the transmitter battery status.

- High security 'Keeloq' remote control
- Easy design-in modules
- Up to 100 metres AM range
- AM low power range up to 50m
- Flash programmable technology
- 1-4 channels
- Serial data output
- Provides simple bolt-on remote control
- EMC compliant-requires no radio license

Receiver Decoders
- Ceramic technology
- Easy Learn transmitter feature
- Low power version (I <0.5mA)
- Receiver learns up to 50 transmitters
- CMOS/TTL outputs, latch or momentary
- Serial Data output (Transmitter ID)
- Outputs transmitter battery status

Transmitter Keyfobs

- Miniature pocket keyfobs
- 1, 2 or 3 switch options
- Power saving auto shut-off feature
- User customisable housing

AM-4-ER Series Transmitter and Receiver Modules

Developed by LPRS, "easy-Radio" embedded software protocols provide a "data-in, data-out" solution for wireless links. Rapid time to market is achieved as well as optimised range.

'ER' transmitters will accept most standard data at the input, convert it to an efficient 'over-air' format, transmit the data to a matching "easy-Radio" receiver, which converts the data and feeds it to the user's host processor.

The receiver is a high performance AM superhet design with front end SAW filter, which meets the current market demands for rugged devices, that can "live" in the real world where interference is often present. The receiver will automatically learn the transmitter code on initial transmission.

The 2 button keyfob AM transmitter provide an encoded signal. The receiver goes into learn mode on power up and learns the transmitter code. There are 2 output states on the receiver, one latched and one momentary.

- Typical range 50m line of sight
- No radio software protocols to write
- Works first time
- Fastest possible route to market
- Easy code learning
- 433.92MHz frequency
- SAW front end filter for better interference performance-continues to function in the presence of TETRA signals
- For use anywhere in the EU
- Virtually emission free for EU compliance
- Compliant with R&TTE directive for Europe

Applications:
- General purpose remote controls
- Security alarms systems

F.M. Transmitters & Relay Receivers for Embedded Radio Control

A range of compnents for embedded remote control applications. These components provide a high performance yet easy design-in system requiring little knowledge of RF remote control for a multitude of different applications. All products are EMC compliant for license free use within europe. Using FM technology provides a longer system range with more penetration of obstacles.Available as either 1, 2 or 3 switches this FM range of miniature pocket keyfob encoders are housed in tough ABS enclosures and are supplied with battery ready to operate. The overlay sticker can be customised to users' graphics etc.
The transmitters use Keeloq algorithm wich provides the highest level of security available. Each time the transmitter is operated it transmits a unique 67bit word which is never repeated even if the battery is changed.
The receiver has an easy-to-use 'Learn' facility, and is capable of learning up to 50 unique keyfob encoders. Once learnt, the receiver outputs 4 digital data, one serial and the transmitters battery level stauts.

- High security Keeloq remote control
- FM Techology provides more reliable operation with improved range
- Easy design-in modules
- Up to 150 metres range
- 1-4 channels
- Serial data output
- Provides simple bolt-on remote control
- EMC compliant-requires no radio license

Transmitter Keyfobs

- Miniature pocket keyfobs
- 1, 2 or 3 switch options
- Power saving auto shut off feature
- User customisable housing
- EMC compliant

Receiver Decoders

- Ceramic superheterodyne receiver
- Easy Learn transmitter feature
- Receiver learns up to 50 transmitters
- Relay & CMOS/TTL outputs
- Latch or momentary outputs
- Serial data output (Transmitter ID)
- Outputs battery status
- Single 5V or 12V PSU

	Transmitter	Relay Receiver
Supply voltage	12V GP23A battery	5V

433MHz FM Radio Transmitter and Receiver

T5/R5

The QFMT5 and QFMR5 data link modules are miniature UHF radio modules which enable the implementation of a simple telemetry link up to 300 metres, and at data rates of up to 20Kbits/s.

The QFMT5 and QFMR5 modules will suit one-to-one and multi-node wireless links in applications including building and car security, remote industrial process monitoring and computer networking. Because of its small size and low power requirements, these modules are ideal for use in portable battery powered wireless applications.

- Miniature SIL package
- Fully shielded
- Data rates up to 15Kbits/s
- Range up to 400 metres
- Single supply voltage
- Industry pin compatible

QFMT5-434

- Temp range -20°C-+80°C
- No adjustable components
- Good shock resistance

QFMR5-434

- High sensitivity
- Analogue, digital outputs
- Signal strength output (RSSI)
- Single conversion FM super-het

These modules are compatible with:

120-1009	120-1010	120-1011	120-1012
FM-X1-433	FM-X1-433A	FM-TX2-433	FM-RX2-433A-5V

	Transmitter	Receiver
Supply voltage	5V	5V

Low Cost FM Receiver Module

QUASAR

The QFM-RX1 Super Heterodyne receiver module provides a complete radio receiver which can be used to receive undecoded data from the range of QuasarUK FM transmitter modules.
The receiver incorporates an entire Phase-Locked Loop (PLL) ensuring precise local oscillator generation. The module is very simple to operate and offers low power consumption allowing for extended battery life without the need to power down the module.

Data can be fed directly into a microprocessor or decoding device, thus keeping the component count down and ensuring a low hardware cost.
All receivers are compatible, producing a CMOS/TTL output, and only require connections to power and antenna.

Features

- FSK Radio Receiver
- CMOS / TTL Output
- Stable Operating Frequency
- 5Vdc Operating Voltage
- Low Power Consumption
- Wide Operating temperature

Applications

- Car Security Systems
- Automation Systems
- Remote Gate Controls
- Remote Sensing
- Data Capture
- Sensor Reporting

Characteristic	Typ.	Characteristic	Typ.
Supply Voltage	5Vdc	RF Sensitivity	-106dBm

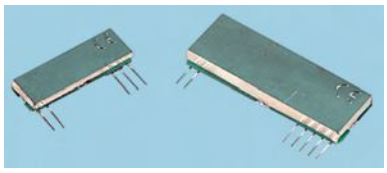
Low Cost FM Transmitter Module (SMT)

QUASAR

A Miniature FM transmitter module providing a complete RF transmitter which can be used to transmit data at up to 4.8Kbps from any standard CMOS/TTL source.
The module is very simple to operate and offers low current consumption (typ. 15mA). Data can be supplied directly from a microprocessor or encoding device, thus keeping the component count down and ensuring a low hardware cost.The modules are compatible with the Quasar UK Ltd. range of FM receivers to provide a complete wireless solution.

Features
- Complete RF Transmitter
- Transmit Range Up To 200m*
- CMOS / TTL Input
- No Adjustable Components
- Very Stable Operating Frequency
- Low Current Consumption (Typ 15mA)
- LV TTL Operating Voltage (2.2-3.5v)
- FSK Modulation
- Efficient Power Amplifier



Applications
- Wireless Security Systems
- Car Alarms
- Remote Controls
- Remote Sensing
- Data Capture
- Automation systems

Characteristic	Typ.	Characteristic	Typ.
Supply Voltage	3Vdc	Output Power	10dBm
Suupply Current (Vcc=3V IN=1kHz)	15mA	Turn on Time (from Standby)	1ms
Standby Current	05µA	Max Data Rate	4800Hz
Working Frequency	433.92MHz		

492556

Order Code	Price Each 1+	5+
151-7426●	4.76	4.18

Long Range F.M. Narrow Band Transmitters/Receivers

- Miniature SIL package
- FM Narrow Band (12.5kHz)
- 1,000 metres optimum range
- Crystal controlled
- Data rates up to 20Kbps

Transmitter T7G
- Digital inputs
- Narrow Band crystal stabilised

Receiver R7G
- Small form factor
- Data & AF out
- CD implemented on data output
- RSSI output
- Selective ceramic IF filters

Applications
- Telemetry systems
- Wireless networking
- Domestic and commercial wireless security systems
- Panic attack facility
- Remote control for cranes etc

The T7G and R7G are miniature narrow band transmitter and receiver UHF radio modules, which enable the implementation of a simple telemetry link at data rates up to 20Kbps.
The transmitter is based on the classical phase locked loop using a crystal oscillator. This results in an accurately controlled RF output in the frequency domain. A significant advantage of this is that narrow filtering can then be used in the receiver, which results in high interference immunity. In addition, the module is fitted with a voltage regulator which gives better supply filtering and a constant RF output level. The receiver is based on the single conversion super-het principle using phased lock loop technology. Because of their small size and low power requirements, the modules are ideal for use in battery powered wireless applications.

	Transmitter	Receiver
Supply Voltage	5V	5V
Supply Current	25mA typical	1.1mA typical

FM Telecontrolli Hybrid Tx/Rx Modules

433MHz or 868MHz

These miniature RF modules provide a cost effective high performance FM Radio data link, at either 433MHz or 868MHz. Manufactured using laser trimmed Thick Film Ceramic Hybrid, the modules exhibit extremely stable electronic characteristics over an Industrial Temperature range. The hybrid technology uses no adjustable components and ensures very reliable operation.
This transmitter and receiver pair enables the simple implementation of a data link at distances up to 75 metres in-building and 250 metres open ground.
These modules will suit one-to-one and multi-node wireless links in applications including car and building security, EPOS and inventory tracking, remote industrial process monitoring and computer networking. Because of their small size and low power requirements, these modules are ideal for use in portable, battery-powered applications such as hand-held terminals.

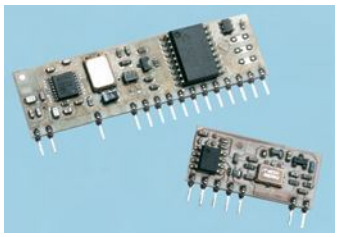
- FM Radio transmitters & receivers
- Available as 433MHz or 868MHz
- Transmit range up to 250m
- Miniature packages
- Data rate up to 9.6Kbps
- No adjustable components
- Very stable operating frequency
- Operates from -20° to +85°C

Transmitter
- 3-12V supply voltage
- SIL or DIL package

Receiver
- PLL XTAL design
- CMOS/TTL output
- RSSI output
- Standy mode (max 100nA)
- 5V supply voltage

Applications
- Wireless security systems
- Car alarms
- Remote gate controls
- Remote sensing
- Data capture
- Sensor reporting

Transmitters
There are two versions of transmitter:
RTFQ1: A Dual-in-Line package operating at 3.3V. This provides the most rugged mechanical fixing to the host PCB. Power Down mode is also available.
RTFQ2: A Single-in-Line package incorporating a voltage regulator for 3-12V operation. (Compatible with many other RF transmitter modules)



Receivers
There are two versions of receiver:
RRFQ1: A Single-in-Line package with sleep/Power Down mode.
RRFQ2: A Single-in-Line package, pin compatible with many other receivers.

	Transmitter	Receiver
Supply Voltage:

Smart Radio Transmitter and Receiver

The RF620 Smart Radio modules provide low cost reliable wireless data communications.
They contain an integrated microprocessor which performs the necessary encryption to optimise the data for transmission by radio. This ensures the maximum range and reliability.
If a secure point to point link is required then the RF620R receiver can be matched to the RF620T transmitter by a simple learn procedure. This also allows several separate point to point links to communicate consecutively in the same area.

- Easy to use Radio AM Transmitter & Receiver
- AM or FM Radio Hybrid Technology
- Supports Data and Telemetry communications
- Simple CMOS/TTL Data Interface
- Automatic data encryption/decryption
- Host Interface upto 19200 Baud
- Optional host Flow Control
- On Board Buffer
- Transmit Range Up To 250m
- 4 Telemetry Lines
- Operates from -20 to +85°C
- Applications: Wireless Security Systems, EPOS Terminal and meter Reading, Wireless RS232, Sensor Data Logging, Remote Telemetry & Telecommand etc.

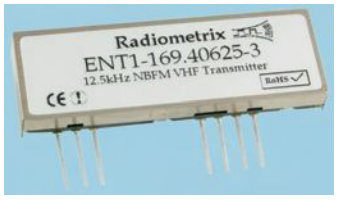
Smart Radio Narrow Band Transceiver RF650

The RF650 radio transceiver module provides a reliable wireless communication for the transfer of data. With RF data rates of up to 100kbps, their unique features of narrow band operation and user channel selection combined with excellent interference rejection make them an ideal choice for next generation applications. The transceivers have the functions of a complete radio modem and simply require CMOS/TTL data at the transmit input and the corresponding transceiver(s) output the same data. Operating in the 433MHz band the modules operate in user selectable channels. The RF650 can use any channel in 100kHz steps.



- Intelligent Modem RF Transceiver
- RF Data Rates to 100 kbps
- Up to 250M range
- Selectable Narrowband RF Channels
- Crystal Controlled RF Design
- Supply Voltage 3.3V
- Serial Data Interface with Handshake
- Host Data Rates up to 38,400 Baud
- Very Stable Operating Frequency
- Low Profile Ceramic DIL Package
- Operates from -20 to +70°C
- Operating Modes: Point to Point, broadcast, One to Many Network and Many to One Network
- Applications: Wireless Security Systems, EPOS Terminals, Sensor Data logging, Remote Telemetry & Telecommand, Remote Meter Reading
- Available in 433MHz or 868MHz versions

ENT1 Transmitter

RADIOMETRIX

The ENT1 is a 12.5kHz narrow band FM single frequency VHF transmitter and offers a 100mW RF output in Radiometrix SIL standard pin-out and footprint. This makes the ENT1 ideally suited for 169.4 - 169.8125MHz band Automatic Meter Reading (AMR), Tracking and Social Alarm applications.

Transmit Power	+20dBm (100mW)
Standard Frequency	169.406250MHz
Custom Frequency	On any 12.5KHz channel from 169.4 to 169.8125MHz
Data Rate	3 kbps
Supply Voltage	5V @ 70mA
Operating Range	>1 Km

NTX2/NRX2 Transmitters and Receivers

RADIOMETRIX

NTX2 transmitter and NRX2 receiver are 25kHz Narrow Band FM UHF modules ideally suited to those low power applications where existing single frequency wideband UHF modules provide insufficient range.

- Standard frequencies: 434.075MHz, 434.650MHz and 458.700MHz
- Custom frequencies available in 433MHz (EU) and 458MHz (UK) bands
- SAW front end receive filter
- Data rates up to 10kbps
- Operating range: >500m

NRX2

- Dimensions: 47 x 17 x 8mm
- Sensitivity: -118dBm (for 12dB SINAD)
- Supply : 2.9 - 15V @ 14mA

TX2/RX2A Transmitters and Receivers

RADIOMETRIX

The TX2A and RX2A are Wide Band FM UHF radio transmitter and receiver pair. Unlike SAW resonator based designs, these crystal controlled PLL based radios offer improved frequency stability over a wider operating temperature range. These units enable the simple implementation of a data link at up to 64 kbps at distances up to 75m in-building and 300m open ground.

- Standard frequencies: 315MHz, 433.92MHz and 434.42MHz
- SAW front end receive filter
- Data rates: upto 10kbps or upto 64kbps
- Operating range: >300m
- Operating temp: -40 to 85°C

TX2A

- Dimensions: 32 x 12.5 x 3.8mm
- Transmit power: +10dBm (10mW)

TLC2H/RLC2H Transmitters and Receivers

RADIOMETRIX

TLC2H transmitter and RLC2H receivers are Low-cost Multi-channel 25kHz Narrow Band FM UHF radio modules in an industry-standard pin out and footprint.

- Standard frequencies: 32 channels. 433.875 - 434.650MHz
- Custom frequencies in 433MHz (EU) and 458MHz (UK) bands
- 315MHz version also available
- SAW front end receive filter
- Data rates up to 5kbps
- Operating range: >500m
- Serial (32 channels) or parallel (16 channels) frequency selection
- User re-configurable via an RS232 interface

TLC2H

- Dimensions: 37 x 27 x 8mm
- Transmit power: +10dBm (10mW)
- Supply: 3.1-15V @34mA

Transmitter	Matching Receiver
TLC2H-433-5	RLC2H-433-5

RLC2H

- Dimensions: 50 x 30 x 10mm
- Sensitivity: -120dBm (for 12dB SINAD)
- Supply range: 3.7 - 15V @ 18mA
- Quasi-DC coupled data recovery circuit
- Adjacent Channel: -60dBm
- Blocking: -84dBm

Receiver	Matching Transmitter
RLC2H-433-5	TLC2H-433-5

TXL2/RXL2 Transmitters & Receivers

RADIOMETRIX

The TXL2 and RXL2 modules are 9600baud half-duplex Multi-channel Wide Band FM radio modems in a SIL footprint. The TXL2/RXL2 pair act as a transparent one-way serial cable to attached host. Unlike raw FM radio modules, TXL2/RXL2 will take care of preamble, synchronisation, bit balancing and error checking along with automatic noise squelching when there is no transmission.

- Selectable operating frequencies: 433.285, 433.605, 433.925 (default), 434.245 or 434.565MHz.
- SAW front end receive filter
- Data rate: 9600 baud asynchronous (5V CMOS level inverted RS232)
- 1 of 8 programmable addresses
- Operating range: >300m
- < 14ms end-to-end link latency

TXL2

- Dimensions: 42 x 18 x 7mm
- Transmit power: +10dBm (10mW)
- Supply: 5V @ 28mA (transmit)

Transmitter	Receiver
TXL2-433-9	RXL2-433-9

Receiver	Transmitter
RXL2-433-9	TXL2-433-9

RXL2

- Dimensions: 33 x 23 x 7mm
- -107dBm sensitivity @ 1% BER
- Supply: 5V @ 22mA (receive/idle)
- Receive spurii better than -50dB
- Adjacent channel -65dB (@ 320kHz)
- Blocking: 80dB

BiM1 Transceiver

RADIOMETRIX

BiM1 is a 25kHz Narrow Band VHF transceiver module in the Radiometrix transceiver pin-out and footprint. This makes the BiM1 ideally suited for those applications where existing UHF transceiver modules provide insufficient range.

- Dimensions: 33 x 23 x 10mm
- Standard frequencies 151.300MHz, 173.225MHz, 173.250MHz
- Other frequencies from 120MHz to 180MHz
- Data rates up to 10kbps
- Usable range over 1km
- Also available as separate BiM1T transmitter and BiM1R receiver
- Transmit power: +20dBm (100mW) 151.300MHz
  +10dBm (10mW) 173.250MHz
- Supply: 3.8 - 15V @ 80mA (100mW transmit)
  25mA (10mW transmit)
  8mA (receive)
- Sensitivity: -120dBm (for 12dB SINAD)
- Operating range: >500m (10mW) or >1km (100mW)
- Adjacent Channel: -70dBm
- Blocking: -84dBm
- Also available as separate BiM1T transmitter and BiM1R receiver
- Verified to comply with Australian, New Zealand standard AS/NZS 4268:2003

465812

Mftrs. List No.	Order Code	Price Each 1+	5+
BIM1-173.250-10	134-8854●	55.58	52.79

NiM2 Transceiver

RADIOMETRIX

NiM2 is a 25kHz Narrow Band FM UHF transceiver. This makes the NiM2 ideally suited for those markets where existing UHF wideband transceivers provide insufficient range.

- Dimensions: 33 x 23 x 10mm
- Standard frequencies: 434.075MHz, 434.650MHz
- Other frequencies from 433.05MHz to 434.775MHz
- SAW front end receive filter
- Data rates up to 10kbps
- Operating range: >500m
- Also available as separate NiM2T transmitter and NiM2R receiver.
- Transmit power: +10dBm (10mW)
- Supply : 2.9 - 15V @ 20mA (transmit) 15mA (receive)
- Sensitivity: -118dBm (for 12dB SINAD)
- Adjacent Channel: -70dBm
- Blocking: -80dBm

BiM2A Transceiver

RADIOMETRIX

BiM2A is a half-duplex crystal controlled PLL based Wide Band FM transceiver. Unlike SAW resonator based designs, these transceivers offer improved frequency stability over a wider operating temperature range.

- Dimensions: 33 x 23 x 5mm
- Operating Frequencies: 433.92MHz or 434.42MHz
- RF output: +10dBm (10mW) BiM2A
  +14dBm (25mW) BiM2H
  +20dbm (100mW) BiM2EH
- Received Signal Strength Indicator (standard)
  Carrier Detect (optional)
- Receiver Sensitivity: -101dBm for 1ppm BER (64kbps),
  - 104dBm for 1ppm BER (10kbps)
- Supply: 2.9V - 16V @ 13mA (transmit)
  11mA (receive)
- Data rates: 10kbps or 64kbps
- Operating range: >300m
- SAW front end filter and full screening

BiM3B Transceiver

RADIOMETRIX

The BiM3B is a half-duplex crystal controlled PLL based Wide Band FM transceiver. Unlike SAW resonator based designs, these transceivers offer improved frequency stability over a wider operating temperature range.

- Dimensions: 33 x 23 x 5mm
- 869.85MHz +7dBm (5mW) 100% duty cycle
  868.30MHz +14dBm (25mW) 1% duty cycle
- Receiver Sensitivity: -101dBm for 1ppm BER (64kbps),
- Supply: 2.7V - 16V @ 35mA transmit (25mW)
  17mA transmit (5mW)
  11mA receive
- Data rates: upto 10kbps or upto 64kbps
- Operating range: >300m
- SAW front end filter and full screening

SMX2 Transceiver

RADIOMETRIX

SMX2 is a 25kHz Narrow Band FM small Multi-channel UHF transceiver.

- Dimensions: 53 x 32 x 12mm
- Operating frequency: 433.05-434.79MHz
- Custom variants from 431 - 437MHz
- Multi channel, synthesized, narrowband (25KHz) transceiver
- SAW front end receive filter
- Data rates up to 5kbps
- 1200 baud half-duplex two-way modem mode
- Operating range: >500m
- Serial (128 channels) or parallel (8 channels) frequency selection
- User re-configurable via an RS232 interface
- Transmit power: +10dBm (10mW) nominal. (factory adjustable 2 - 25mW)
- Supply: 4.1 - 15V @ 35mA (transmit)
  25mA (receive)
- Sensitivity: -120dBm (for 12dB SINAD)
- Adjacent Channel: -60dBm
- Blocking: -85dBm
- User re-configurable via an RS232 interface

RadioWire® Development System

MICREL®

The RadioWire Development system is a multi function development kit that gives the user first hand experience of the RF performance as well as in depth development assistance. Its many features allow the user do basic RF parameter testing as well as being a system development platform.
The four different DIP settings allow the user to do a "quick set-up" without using a PC to evaluate the RadioWire product line. The supplied RF Test Bench PC program allows the user to add a personal touch and to perform a system application specific evaluation such at modifying data rate, power management operating frequency and more.
Features:

RL Re-reeling available

Farnell

Communications - Radio / Remote Control - continued

RadioWire® Development System - continued

- RadioWire performance evaluation
- Firmware development platform (includes ICD2 interface)
- Available with operating default frequency of 433.92 or 915MHz

Kit Contents:

- 2 boards with antenna
- RS232 cable
- Battery
- CD containing source code & reference designs

F.M. Radio Remote Control

1 or 4 Channel 230V ac or 12V dc

Transmitter: L: 100, W: 65, D: 24
Receiver: L: 190, W: 120, D: 60

- Highly secure KEELOQ protocol
- Range up to 200 metres
- Requires no radio licence

Encoder

- Enclosure **IP40** rated
- Automatically transmits battery low condition

Decoder

- Enclosure **IP65** rated
- Easy installation via screw terminals
- 230V ac or 12-30V dc supply
- LED indication of each relay output
- Momentary or latching outputs
- 1 timed output adjustable 0 to 255 secs.
- Relay contacts 5A @ 230V ac
- Requires no radio licence

This F.M. remote control system is supplied ready to operate. The system uses the KEELOQ encryption algorithm providing the world's most advanced high security protocol and comprises of a hand-held encoder with receiver decoder unit.

The receiver decoder is supplied in an **IP65** rated enclosure and may be powered from either 230V ac or 12-30V dc. Operation of the transmitter key switch causes the relay in the receiver/decoder to operate. The relay may be set to latching or momentary operation by an on-board jumper link on the PCB. A further output channel indicates that the transmitter keyfob battery is low and should be replaced.

All connections to the system are via screw terminals.

Up to 50 transmitter encoders may be programmed to the decoder using the easy learn facility. Full instructions are supplied.

Radio Remote Control Switching Devices

This product offers incredible ease of installation and use, combined with advanced, intelligent features that make it a truly unique product. There are four variants in the range, from mains powered, weatherproof systems to miniature, low voltage, internal systems. Each system is controlled using a two button key fob transmitter that contains replaceable batteries. Typical applications include short range remote control, garage door openers and general purpose lighting.

- Any number of extra key fobs can be programmed to operate the unit.
- Output relay offers voltage-free, changeover contacts rated at 8A at 240V ac
- Screw terminals and cable glands for rapid connection
- 50-100m range dependant on terrain
- Licence exempt
- Two-channel transmitter fob supplied with every receiver, extra fobs available

RCU01 System

- Supply voltage range from 10-24V ac or dc
- Wall mounted bracket
- Smart, rigid antenna fixed to enclosure
- Dimensions (WxHxD): 75x27x50mm

RCU02 System

- Same as RCU01 but with a flexible antenna on 1 metre of cable

RCU03 System

- Supply voltage range from 10-24V ac or dc
- Weatherproof IP65 enclosure
- Smart, rigid antenna fixed to enclosure
- Dimensions (WxHxD): 115x40x65mm

RCU04 System

- Same as RCU03 but with supply voltage range from 220-240V ac

A.M. / F.M. Pocket Keyfob Remote Control Systems

This versatile range of Remote controls use a highly secure 'Keeloq' protocol to provide reliable Remote switch at a competitive price.
Supplied ready to operate as either a 1, 2 or 3 channel system, installation requires connection to the power supply and the output relay contacts. Screw terminals are provided for this. The system can switch upto 12A at 230V ac (max), 5A continuous. Each relay can be set to latch or operate momentary operation via user changeable links.
Futher Transmitters may be added to the system using the Keeloq Easy learn feature, (a max of 50 transmitters can be used per Rx unit).
Supplied in tough ABS, both transmitter and receiver units provide a waterproof enclosure, the transmitter is IP40 rated whilst the receiver unit is IP65. The receiver unit is supplied with wall mounting lugs.

- Complete remote control systems
- High security Keeloq protocol
- Easy Learn Tx encoder feature
- Range
  AM version upto 100 metres
  FM version upto 150 metres
- Easy installation via screw terminals
- 230V ac or 12/24V dc supply
- Output relay rated $12A_{pk}$ ($5A_{cont}$)@ 230V ac
- Mementary or latching outputs
- Optional serial output
- IP65 rated enclosure with wall mount brackets
- Up to 50 transmitters per system
- EMC compliant for use in Europe

F.M. Pocket Keyfob Remote Control Systems

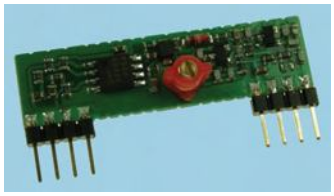
This Keeloq based Remote control system provides a high security Remote switch at a low cost. Supplied ready to operate as either a 1, 2 or 4 channel system, installation requires connections to the power supply and the output relay contacts. Screw terminals are provided for this.
The system can switch upto 12A at 230V ac (max), 5A continuous. Each relay can be set to latch or momentary operation via user changeable links.
Further Transmitters may be added to the system using the Keeloq Easy learn feature, (a max of 48 transmitters can be used per Rx unit.)Supplied in tough ABS, both transmitter and receiver units provide a waterproof enclosure, the transmitter is IP40 rated whilst the receiver is IP65. The receiver unit is supplied with wall mounting lugs.
In addition the 129 series decoders also provide a serial data output (RS232) providing the transmitter serial number and the battery status.The system can be supplied as a low cost FM or FMNB (Narrow Band),
FM: provides an improved performance for consistent, reliable operation over a longer range.
FMNB: provides a high performance FM system, is more resilient to external interference and able to operate in higher interference areas.

- Complete remote control systems
- High security Keeloq protocol
- Range
  FM version upto 200 metres
  FMNB version upto 1000 metres
- Easy installation via screw terminals
- 230V ac or 12/24V dc supply
- Output relays rated 12A_{pk} (5A_{cont})@ 230V ac
- Mementary or latching outputs
- Optional serial output
- IP65 rated enclosure with wall mount brackets
- Up to 48 transmitters per system
- 433MHz parts EMC compliant for use in Europe

Remote Control (ASK) Receivers, Transmitters & Kit

RADIOTRONIX

New

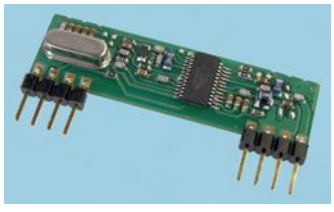


RCT-433-ASBR

The RCT-433-ASBR is ideal for remote control applications where low cost and longer range is required. The transmitter employs a SAW-stabilized oscillator, ensuring accurate frequency control for best range performance. Output power and harmonic emissions are easy to control, making FCC and ETSI compliance easy. It is suitable for IR reflow ovens and hot air soldering.

Features:
- SAW Based
- Ultra small SMT package (.4" x .25")
- 5mA current consumption at 3V
- 0 dBm output power at 3V
- 4800 baud operation
- Reflow compatible
- Low cost easy to use

Applications:
- Industrial controls
- Fan and Hot tub controls
- Medical
- Security and Motion controls
- Remote keyless entry (RKE)
- Remote lighting controls
- Remote Control



RCR-433-MPR

The RCR-433-MP RF receiver module offer a low cost solution for remote control type applications. The receiver is compatible with almost any ASK or OOK data transmitter and can receive legally transmitted signals from distances as far away as 300 feet. The receivers operate at 5V and draw only 2.4mA.

Features:
- 1 - 4.8kb/sec. data rate
- No external parts required
- 2.4mA Current drain
- PLL based local oscillator
- -102 dBm Sensitivity
- Industrial temp spec -40C to +85C

Applications:
- Industrial controls
- Fan and Hot tub controls
- Medical
- Security and Motion controls
- Remote keyless entry
- Remote lighting controls
- Remote Control

RCR-433-EPR

The RCR-433-EP high performance RF receiver module offers a low cost solution for remote control type applications. The receiver is compatible with almost any ASK or OOK data transmitter and can receive legally transmitted signals from distances as far away as 600 feet. The receivers operate at 5V and draw only 4.5mA.

Features:
- PLL based local oscillator
- 5V operation
- 2.4mA Current drain
- No external parts required
- Size 1.76" x .43"
- 1 kbit/sec. to 4.8kb/sec. data rate
- -109 dBm Sensitivity

Applications:
- Industrial controls
- Fan and Hot tub controls
- Medical
- Security and Motion controls
- Remote keyless entry
- Remote lighting controls
- Remote Control

RK-433-RC

The RK-433-RC is a rapid-development/evaluation kit for the Radiotronix family of 433 MHz transmitter and receiver modules. The kit is designed to allow engineers a fast wireless keyless entry and remote control development solution for integration into their applications.

Kit Includes:
- 2x SecureFOB™ transmitters
- 4x Receiver Modules
- 1x RCR-433-EPR (High Sensitivity Super-Het Receiver Module)
- 1x Receiver Evaluation Board
- 1x Right Angle, Reverse Polarity, 433MHz Helical Antenna
- 1x 9 V/ 450 mA Power Supply
- 1x CD, contains Kit User's Manual and related Datasheets

Club Radio Systems

New

The Club radio release system is designed to handle the rigours of continuous operation 365 days or the year.
This design uses rugged enclosures with "resin dipped" circuit boards for protection against water ingression.
Club systems are supplied, ready to go with screw terminals for relays and power.

Club200: Provides up to 200m range
Club1000: Provides up to 1000m range

- Rugged remote control system
- Simple switch Tx and Rx pairing
- 256 possible address combinations
- "One transmitter" can control "Many Receivers"

Transmitter

- 1 or 3 switched versions available
- "Rain" proof protective rubber boot
- Uses standard PP2 9V battery (supplied)

Receiver

- Receiver unit waterproof to IP65
- Easy installation via screw terminals
- Relay "switch" outputs

FireFly / FireBlade Remote Control Systems

New

FireFly

FireBlade

The FireFly & FireBlade are a range of general purpose remote control systems. Installation simply requires connections to power supply and the output relay screw terminals. The output relays are activated by the button press on the transmitter encoder.
Housed in a rugged IP68 weatherproof enclosure, the receiver has the capacity to learn up to 15 transmitter button pairings. These are memorised even if the power is removed.
Each individual switch on each of the transmitters may be paired with any or all of the receiver relay outputs.

Features:

- 1, 2 or 4 channel systems
- 12 / 24Vdc or 230Vac Supply
- Range:
- FireFly up to 100 metres
- FireBlade up to 500 metres
- Reliable FM Modulation
- High Security RF Protocol
- 'Easy Learn' Tx Encoder Feature
- 4 Relays 6A @ 230Vac
- Momentary, Latching or Timed Outputs
- IP68 Rated Receiver Enclosure

An Introduction to Low Power Radio

Aimed at the practical engineer, this book concentrates on discussing theoretical matters in an easy to understand manner, allowing system design decisions to be made which will result in functional and reliable designs with low power radio.
Subjects covered include: the basic principles of radio wave propagation, modulation and reception, investigation into the methods to encode and decode data. Hints and tips are given as to the best techniques for different applications.
Practical radio data systems are covered, including design of 'aerial' and 'PCB layout', selection of various low power radio data modules, and review of encoding techniques.

TDL2A Packet Modem

RADIOMETRIX

The TDL2A is a 9600baud half-duplex Multi-channel Wide Band FM radio modem in DIL footprint. TDL2A acts as a transparent two-way serial cable to attached DTE host. Unlike raw FM transceiver, TDL2A will take care of preamble, synchronisation, bit balancing and error checking along with automatic noise squelching when there is no transmission.

- Dimensions: 33 x 23 x 7mm. Fully screened
- Selectable operating frequencies: 433.285, 433.605, 433.925 (default), 434.245 or 434.565MHz.
- Data rate: 9600 baud asynchronous (Inverted RS232 at 5V CMOS level)
- 1 of 8 programmable addresses
- Transmit power: +10dBm (10mW)
- Supply: 5V @ 28mA (transmit)
  22mA (receive/idle)
- <14ms end-to-end link latency
- -107dBm sensitivity @ 1% BER
- Operating range: >300m
- Adjacent channel: -65dB (@ ±320kHz)
- Blocking 80dB
- SAW front end receive filter

Mini Evaluation Kit

Fastrax

New

The Mini Evaluation kit is a small, compact, PCB meant for evaluating and testing of iTrax03, iTrax100, iTrax300 and uPatch Families. The basic idea of Mini Evaluation kit is to provide a pc-interface for GPS-modules. The Mini Evaluation kit is interfaced via USB cable and it's also powered from the USB so no external power is needed.

The Mini Evaluation Kit has the following Connectivity:

- 40-pin socket for iTrax Application Boards
- uPatch130/uPatch300 connector
- Two USB connectors (Mini-B)
- Reset switch
- Programming switch for firmware upgrade
- PPS signal in pinheader
- General I/O lines can be probed from 40-pin socket- connector if needed

UC322 GPS Receiver & EV322 Evaluation Board

Fastrax

New

The UC322 is an OEM GPS receiver module, which uses the state of the art SiRF single chip receiver GSC3LT with high navigation sensitivity (-159dBm). The UC322 receiver provides low power consumption (90mW) and very fast TTFF together with weak signal acquisition and tracking capability to meet even the most demanding performance expectations.

Features:

- Optimizied for high volume Personal Navigation Devices (PND's)
- Enables very thin end applications
- SiRF GSC3LT chipset
- 20 channels
- Size 10.4 x 30.0 x 2.9mm
- Sensitivity -159 dBm (tracking)
- Power consumption: 90 mW @ 3.3V
- ROM firmware
- Operating temp: -30°C to +85°C

The EV322 Evaluation Board provides easy evaluation of the Fastrax UC322 module. The EV322 Evaluation Board provides a single chip USB to UART Bridge, a regulated +3.3V power supply for the UC322 and three push buttons for reset, ON_OFF (Nor-mal/Hibernate) and re-programming mode control.

IT321 GPS Receiver & AP321 Application Board

Fastrax

New

The IT321 is a state of the art GPS receiver module, based on the SiRFstarIII, GSC3LT single chip combined with SiRF ROM code. This tiny GPS receiver provides low power consumption and very fast time-to-first-fix together with weak signal acquisition and extremely demanding tracking capability to meet even the most stringent performance requirements on the market.

Features:

- SiRFstarIII chip set
- 20 channels
- Very Low Power Consumption: 90mW @ 3.3V
- Ultra high sensitivity: -159dBm (navigating)
- Very small form factor: 10.4 x 14.0 x 2.3 mm
- ROM based firmware

The AP321 is an Application Board with a IT321 receiver installed in order to make evaluation of the GPS receiver easier.
Application Boards are used together with either Fastrax Mini Evaluation Kit or with Fastrax Evaluation Kit. They are connected to either of the kits with the on-board 40 pin system connector. The application board is equipped with a MCX antenna connector for the external active antenna.

Wireless CPUs & Development Kits Q26 Family

wavecom

New

The **Q2686** is equipped with up to 44 GPIOs and is especially suited to applications which require a high number of connections. The Open AT® OS runs on an ARM9 core, providing applications with up to 87 MIPS (using VariSpeed). It features a market-leading range of peripheral interfaces, including companion Bluetooth® and GPS.

The **Q2687** is an automotive-grade Wireless CPU® which is backwards compatible with the Q2686, forwards compatible with 3G evolutions and their cellular software application development environments so that application portability is made easy. It also supports a new parallel data bus for interfacing to displays and external memory and data bearers up to EDGE.

The **Q2686H-DK** and **Q2687H-DK** Development Kits allow Development of Automotive, industrial M2M and Mobile Professional applications.All functions of the kits are provided by the wireless CPU.

	Q2686H	Q2687H
Core Processor	ARM9, 32 bit, 104 MHz running Open AT® RTOS as standard	ARM9 4 6, 32 bit, 104 MHz running Open AT® RTOS as standard

WS5021 GPS Receiver & Antenna OEM Module

WI·SYS

130-2970

130-2971

The WS5021 GPS Receiver + Antenna OEM Module incorporates a highly sensitive 12-channel, quick time-to-fix GPS Receiver and a high performance active GPS antenna for optimum signal reception. It features the newest generation super-integrated GPS System on Chip (SoC), a custom designed ceramic patch element that minimizes detuning effects caused by adjacent objects, as well as a Low Noise Amplifier and a SAW filter. The WS5021 GPS Receiver + Antenna OEM Module is housed in a very compact 25.5 mm x 27.6 mm x 7.6 mm PCB surface mount package or a connectorized module and comes with 3.3V CMOS interface.

- Integrated GPS receiver, GPS antenna, LNA & SAW filter
- High performance GPS engine (-146 dBm sensitivity)
- 12 channel simultaneous operation
- Low noise LNA and SAW band-pass filter
- GPS output: NMEA 0183 output
- 1 PPS timing source
- 3D fix output
- Low current: 45mA
- 3.3V operation
- Flexible mounting options

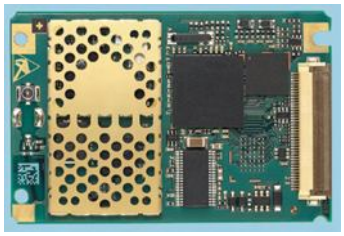
MC55 Wireless Module

SIEMENS

The MC55 wireless module is the smallest double tri-band modules on the market today. Being extremely compact in size, this is especially suitable for use in mass-produced consumer goods like mobile phones, smart phones, PDAs and other portable devices. The tri-band module is available to cover all of the GSM/GPRS networks that exist across the world - and subsequently enable you to develop products for the global market.



- Compactness (35 x 32.5 x 2.95 mm), weighs only 5.5 grams
- Double tri-band operation: 900, 1800 and 1900 MHz
- Voice and data communication
- TCP/IP via AT commands with: TCP, UDP, HTTP, FTP, SMTP, POP3
- Designed for Microsoft® Windows Mobil™ 5.0-based devices (Smartphones and Pocket PCs)
- GPRS (class 10), PBCCH support

TC35i Wireless Module

SIEMENS

Small dimensions, a flexible installation design, simple integration and low power consumption are all essential features of the TC35i radio module. Developed primarily for high-volume M2M applications, the TC35i is employed in the areas of measurement and remote maintenance, transportation and logistics, traffic systems, gateways and access, vending machines, security, health care and building technology.

The link between the TC35i radio module and your application is created via a ZIF connector and a GSC aerial socket. R&TTE, GCF and network operator approvals have been obtained, making it simpler for you to obtain approvals for your own applications.

- GSM dual band (900/1800 MHz)
- Small size (54.5 x 36.0 x 3.6 mm)
- Low power consumption (stand-by mode: 25 mA, talk mode: 300 mA)
- SIM Application Toolkit
- Extended AT commands for M2M applications

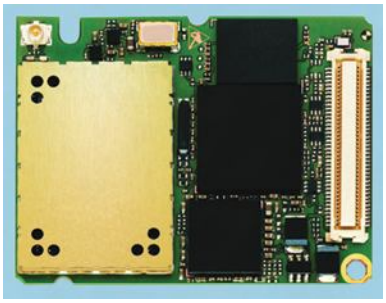
TC63 Wireless Module

SIEMENS

The TC63 incorporates the same top-quality GSM/GPRS technology as the TC65, but doesn't feature its Java™ platform. That's why it is particularly Fell-suited to classic applications that require additional hardware. Featuring quad-band radio technology, GPRS Class 12 and an integrated TCP/IP stack, the module sets new standards in GSM/GPRS connectivity. The potential uses of the TC63 are manifold - no matter how you utilise the module, be it in security-related applications, vending machines, fleet-management systems or a whole host of other applications, the module is a real all-rounder in the m2m sector!

The new standards the TC63 sets particularly refer to its many uses and its connectivity. As a quad-band module, it can be employed in GSM networks anywhere in the world. It also possesses two serial interfaces, USB and I 2 C bus interfaces and an integrated TCP/IP stack - in short, you can connect a wide range of devices to it. What's more, its temperature range (-30 to +65°C) has been enhanced to optimise it for use in m2m applications.

Like all other Siemens modules, the TC63 comes with full type approval (FTA) plus worldwide approval from all of the large mobile network operators in accordance with the following standards: R&TTE, FCC, UL, IC, GCF and PTCRB. As a result, applications developers can keep costs down and lower the total cost of ownership. In addition, newly produced m2m applications can be launched on the global market even faster than ever.



- Includes quad-band technology that can therefore be employed in any mobile network worldwide (850/900/1800/1900 MHz)
- Enables high-speed data transfer using GPRS Class 12
- Integrated TCP/IP stack enabling the simple integration of wireless Internet services
- Enhanced operative temperature range and a robust means of mounting

TC65 Wireless Module

SIEMENS

Being based on Java™, the TC65 provides developers working in the machine-to-machine sector (m2m) with a sophisticated developer's software platform. It also incorporates top-quality GSM/GPRS technology including quad-band radio technology and GPRS Class 12. Its various interfaces - GPIOs, I 2 C bus and SPI bus - and the TCP/IP stack allow the module to be integrated in virtually any m2m application. The launch of the TC65 marks the introduction of a new, modern generation of wireless modules to business fields like vending machines, point of sales, remote metering and the security sector.

Apart from saving you development time, the Java™ support offered by the TC65 reduces your costs, as the module requires no additional hardware such as a controller, memory or a TCP/IP stack. Java™ is a complete software platform in itself that enables you to develop brand-new m2m applications without the burden of licence fees and dependence on other manufacturers' technology. Owing to its IMP 2.0 profile, the wireless module allows you to make software updates easily and securely via the air interface (OTAP). In addition to this, it enables data encoding in applications that involve transmitting data in a secure environment (e.g. HTTPS and PKI). The TC65 can process data at high speed thanks to the integrated ARM7 processor, and the memory it requires is provided by its 1.7 MB Flash memory.

Full type approval (FTA) plus worldwide approval from all of the large mobile network operators conforming to standards such as R&TTE, FCC, UL, IC, GCF and PTCRB round off the TC65's suitability as a developer's platform. By using this wireless module, applications engineers can reduce the total cost of ownership as well as put their new m2m applications onto the global market faster.

- Java™ support, IMP 2.0 (IMP 1.0 was used in the TC45)
- Includes quad-band technology that can therefore be employed in any mobile network worldwide (850/900/1800/1900 MHz)
- Enables high-speed data transfer using GPRS Class 12
- High processor performance due to an ARM7 processor
- Large amount of memory space - Flash: 1.7 MB, RAM: 400 kB Integrated TCP/IP stack enabling the simple integration of wireless Internet services
- Secure data transfer and reliable software updates over the air
- Enhanced operative temperature range and a robust means of mounting

Wireless Module Solutions

SIMCom A company of SIM Tech

New

SIM5210Z

The **SIM300x/340x** & **SIM305/345** are either Dual-band / Tri-Band or Quad-Band GSM/GPRS modules. With their tiny configuration they can fit almost all the space requirements in industrial applications. The leading features of each of these modules make them ideal for virtually unlimited applications.

The **SIM508/548** modules are Tri-Band/Quad-Band GSM/GPRS-enabled modules that are equipped with AGPS technology. The compact design of the SIM508/548 makes it easy to integrate GSM/GPRS & GPS as an all-in-one solution.

SIM5210 & SIM5212 are a HSDPA/WCDMA/GSM/GPRS/EDGE module solution that support upto 7.2M downlink speed and 384K uplink speed data service.

The range of **Evaluation boards** (EVBs) are used to support a selection of the above wireless modules.

USB GSM/GPRS Modem

MultiTech Systems

The MultiModem® GPRS wireless modem offers standards-based multi-band GSM/GPRS Class 10 performance. This ready-to-deploy, standalone modem provides wireless data communication and integrates seamlessly with virtually any application. It is available with a broad range of interface options, this being USB, to cover all of your application needs. The MultiModem GPRS wireless modem is based on industry-standard open interfaces and is designed to be desktop mounted.

- GPRS Class 10
- Dual-band 900/1800 MHz GSM/GPRS
- Packet data up to 85.6K bps
- Embedded TCP/IP stack
- Circuit-switched data up to 14.4K bps transparent and non-transparent
- GSM Class 1 and Class 2 Group 3 Fax
- Short Message Services (SMS)
- USB interfaces
- SMA antenna connector and SIM socket
- Serial interface supports DTE speeds to 115.2K bps
- AT command compatible
- MNP2 error correction, V.42bis compression
- Numerous LEDs provide operational status
- Desktop mounting
- PTCRB certified
- Carrier approved

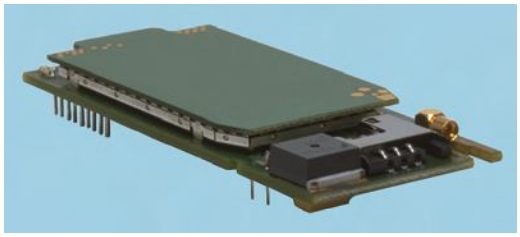
USB GSM/GPRS/EDGE Modem

MultiTech Systems

The MultiModem® EDGE wireless modem delivers some of the fastest cellular wireless data speeds by utilizing EDGE technology. It allows users to connect to the Internet and send and receive data up to three times faster than possible with an ordinary GSM/GPRS network making it ideal for highly data-intensive multimedia applications. Based on industry-standard open interfaces, the MultiModem EDGE wireless modem is equipped with quad-band GSM, which means it can be used worldwide on all existing GSM networks. It is available with a broad range of interface options this being USB, so that you are guaranteed to find a solution that meets your application needs.

Communications - GPS / GPRS / GSM - continued

USB GSM/GPRS/EDGE Modem - continued



- EDGE (E-GPRS) Class 10
- GPRS Class 12
- Quad-band GSM 850/900/1800/1900 MHz
- Packet data rates up to 240K bps (coding scheme MCS-9, LLC layer, 4 time slots)
- Embedded TCP/IP stack
- Circuit-switched data up to 14.4K bps non-transparent mode
- Short Message Services (SMS)
- SMA antenna connector
- Desktop or panel mounting (external models)
- USB interface
- AT command compatible
- Carrier approved
- Numerous LEDs provide operational status
- Voice features include Half rate (HR), Full rate (FR), Enhanced full rate (EFR), Adaptive multi rate (AMR), as well as hands free echo cancellation, and noise reduction

GSM/GPRS/EDGE Modem

MultiTech Systems

The SocketModem® GPRS wireless modem is a complete, ready-to-integrate module that offers standards-based multi-band GSM/GPRS Class 10 performance. This quick-to-market module allows developers to add wireless communication to products with a minimum of development time and expense. The SocketModem GPRS wireless modem is based on industry-standard open interfaces and utilizes Multi-Tech's universal socket design.

- GPRS Class 10
- Dual-band 900/1800 MHz GSM/GPRS
- Packet data up to 85.6K bps
- Embedded TCP/IP stack
- Circuit-switched data up to 9600 bps transparent and nontransparent
- GSM Class 1 and Class 2 Group 3 Fax
- Short Message Services (SMS)
- Advanced management features include phone book management, fixed dialing number, real time clock and alarm management
- MMCX antenna connector and SIM socket
- SIM card holder
- Serial interface supports DTE speeds to 115.2K bps
- AT command compatible
- MNP 2 error correction, V.42bis compression
- Universal socket connectivity

GSM/GPRS Modems

A Miniature "Plug And Play" dual band GSM modem. It can be directly connected to the serial port of a desktop or notebook computer through the RS232 interface. A standard SIM card can be inserted in the integral card holder within the metal enclosure.
The Modems metal casing makes it an appropriate solution for tough applications such as Telemetry, Wireless Local Loop (payphones) or as part of a fleet management system. Its small size makes it simple to integrate in a space constraint environment. The modem is supplied with power cable, other accessories available are and antenna (with 1m coax cable), RS232 connecting cable with Telephone interface and a DIN Rail mounting adaptor.
About GPRS: GPRS stands for General Packet Radio Services. The user can remain "ON" all the time and the data Communication speed can rival with that of a cable modem.

- GSM100LITE: GPRS Class B Class 10 (4Rx+1Tx) (28.8kbps download/ 14.4kbps upload) at maximum speed
- GSM100T: as GSM100LITE with TCP/IP

Network Connection: Your network provider will supply you with a plug in SIM for use with your modem. Remember that the SIM must support Data service.

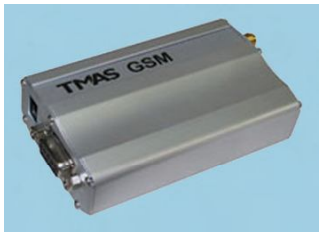
GSM/GPRS Modems
- GSM and GPRS
- Voice / Fax / SMS and Data
- Dual Band 900 / 1800MHz GSM Transmission
- Full voice call, SMS support
- Accepts Standard SIM Card
- Data enabled SIM Cards available
- Miniature size 88 x 60 x 26mm
- Can Be Used On Standard GSM Network
- RS232 Interface
- AT command set (GSM 07.05 and 07.07)
- One user programmable input/Output Port
- GPRS Class B Class 10 (36Kb/s download / 24Kb/s upload)
- GSM100T: TCP/IP stack available for data and internet

Voice Features
- Telephony
- Full Rate, Enhanced and Half Rate
- DTMF Function

Data/Fax Features
- Data circuit asynchronous, transparent and
- Non transparent up to 14,400 bits/s
- Automatic fax group 3 (Class 1 and Class 2)
- MNP2, V.42bis

Short Message Services Features
- Text and PDU
- Point to point (MT/MO)
- Cell Broadcast

GSM Supplementary Services
- Call Forwarding -Calling Line Identity
- Call Barring -Advice of Charge
- Multiparty -USSD
- Call Waiting and Call Hold -Closed User Group
- Explicit Call Transfer



One Programmable Input/Output Port
- One user programmable input/Output Port
- (3V CMOS logic)

Input Voltage	5 to 32V dc
Typ. Supply Current	450mA avg. (5V), 2.5A peak (5V) 35mA in idle mode
Connections	
Serial/Audio	15 pin-D type Connector
Power	4-pin micro-FITTM 3.0 (cable supplied)
Antenna	SMA antenna connection (50Ω)
Dimensions (WxHxD)	60x88x60mm
Weight	120g
Operating Temperature	-15 to 50°C

Low Cost dual Band GSM Modem 900 / 1800 MHz

The low cost TMAS GSM Modem is ideal for a wide range of applications. The modem can be used to make circuit switched data calls, making the unit suitable for remote dial-up systems where a fixed phone line is not available. The SMS functionality enables the sending and receipt of text messages. A common use for this functionality is an SMS server for the automated sending and receipt of bulk text messages.
The modem implements the highly reliable

RL Re-reeling available

Siemens TC35i GSM Engine. This ensures high quality and reliable operation along with compatibility with all standard GSM networks. The modem provides support for the Siemens TC35i AT command list, also available for download from the RF Solutions website.
The TMAS modem is supplied in a rugged extruded aluminum enclosure making it suitable for use in a wide range of industrial and demanding environments. The unit connects directly to a PC or terminal device via the DB-9 RS232 Cable interface. The integral SIM card holder accepts standard SIM cards of all network operators.
The only other connections required are to 5Vdc power supply and Antenna (supplied separately).

- Fax, SMS And Data
- Integral SIM Card Holder
- Siemens TC-35i GSM Engine
- Rugged Extruded Aluminum Enclosure
- Compact Form Factor 86 X 54 X 25mm
- RS232 Interface With Auto Baud Rate Detection
- SMA Antenna Connection
- LED Indication Of Operation

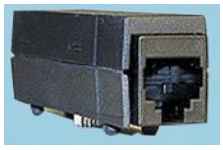
GSM Modem

Quad Band

New

The new GM862-GPS module is at the cutting edge of the Telit product line. It combines a Quad-Band GSM/GPRS modem, with a 20 channel high sensitivity SiRFstarII™ Single Chip GPS receiver. Based on the Pin-to-Pin compatibility of the GM862-GPS module to all previous versions, the functionality of existing and new applications can be extended by the latest state of the art GPS technology. With its ruggedized design, extended temperature range, integrated SIMCard reader and industrial connectors, the Telit GM862-GPS is the perfect platform for all telematics applications, Fleet Management-, Tracking- and Security-devices and more. Additional features like Jamming Detection, integrated TCP/IP protocol stack, easy Scan functionality and the direct support of an embedded camera offer extended functionality to the application.



- Quad-band GSM
- Output power: Class 4 (2W) @ 850/900 MHz, Class 1 (1W) @ 1800/1900 MHz
- Control via AT commands according to GSM 07.05, 07.07 and proprietary Telit
- Supply voltage range: 3,4 - 4,2 V DC (3,8 V DC recommended)
- Power consumption (typical values):Power off - 26uA, Idle - (registered, power saving) <4 mA, Dedicated mode - 170 mA, GPRS cl.10 (max) 500mA
- Serial port multiplexer GSM 7.10
- SIM Access Profile
- GPS power consumption: Stand-by current: 1 mA, Operating current: 70mA, including 20 mA for the antenna LNA
- Sensitivity: -107 dBm (typ.) @850/900 MHz, -106 dBm (typ.) @ 1800/1900 MHz
- Dimensions: 43.9 x 43.9 x 6.9 mm
- Weight: 20 gr.
- Extended Temperature range: -30° / +80°C
- RoHS compliant
- TCP/IP stack access via AT commands

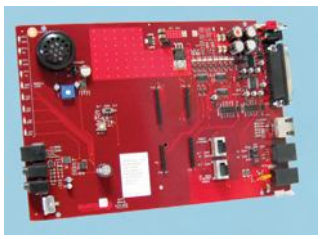
RJ Modem

Embedded Modem



The Multi-Tech RJModem™ embedded modem creates communication-ready devices by integrating modemfunctionality into the most compact, integrated device. The first-of-its-kind RJ-11 form factor includes thecontroller, data pump, DAA and RJ-11 connector providing device manufacturers with the ability to integratedial-up connectivity into any product design. With minimal engineering effort, the RJModem embedded modeminstantly adds global communication capabilities, enhancing the end-user experience and increasing productvalue.

- Complete data modem including the controller, data pump, DAA and RJ-11 connector
- V.92/56K, V.34/33.6K, V.32bis/14.4K data rate options
- High speed models backward compatible with lower speeds
- Telecom approved in more than 50 countries (some pending)
- V.44 and V.42bis data compression
- V.42 error correction
- Intelligent DAA technology detects line status
- AT command compatible
- U.S. Caller ID reporting
- Low power/sleep mode
- FastPOS (V.29) and V.22bis Fast Connect
- V.80 Synchronous Access
- 3.3V or 5V power input options
- Board mount or remote panel mounting
- Two year manufacturers warranty

Socket Modem Development Board

The SocketModem Development kit includes a developer board supporting all SocketModem variants. Specifically designed for testing, programming and evaluating to enable fast development results. The Multitech development board gives the engineer all the functionality needed to work with the full range of SocketModems manufactured by Multitech.

Kit Contains:

- RS232 cable
- Universal power supply
- PSTN and ISDN cables
- Full SocketModem compatibility
- Antenna for testing

RPM2A Packet Modem

RPM2 is a Wide Band FM UHF Radio Packet Modem (RPM2A). The RPM2A uses addressable data packets with error checking and packet acknowledge /retransmit to achieve a reliable transparent wireless data link. Built for ease of use and rapid installation, the serial interface ensures direct connection to microcontroller UART or to any RS232 port via RS232 level converter while remote configuration enables post installation setup of the modem.

- Dimensions: 39 X 23 X 10 mm
- Uses BiM2A transceiver for radio interface (see BiM2A specifications)
- Operating frequencies: 433.92MHz or 434.42MHz
- Operating range: >300m
- Addressable point-to-point mode
- Point-to-Multipoint and broadcast modes
- Inverted RS232 interface at 5V or 3V CMOS level
- DTE speed 600-115200bps
- Overall throughput: 17kbps with ACK and 28kbps without ACK
- Flow control - Hardware (CTS), None
- Built-in command line configuration
- Built-in RF link diagnostics
- Remote over-air unit configuration
- Low operating current, Auto standby mode

Fastrack Supreme Wireless CPU® Development Kit & Terminal

New

The Fastrack Supreme Wireless CPU® keeps the same versatile form factor as previous FASTRACK products and is designed with expandability in mind. Users can easily add additional IO and features (like GPS, WiFi, Bluetooth, Zigbee and more) thanks to a new open standard internal expansion socket (IES) interface that can be populated with an expansion card from Wavecom or one of your own.

The Fastrack Supreme Development Kit is a ready-to-go hardware and software development platform which provides the user with all the tools and accessoriesneeded to prove concepts, deliver prototypes or develop an end user application.

TC35i Terminal

SIEMENS

The TC35i Terminal is the plug & play solution from Siemens Wireless Modules for quick and easy integration. The wide performance range and robust case of the TC35i Terminal enable you to quickly develop new telemetry and telematics applications. The TC35i Terminal is the ideal solution for voice, data, SMS and fax communication, thanks to its standard industrial interfaces and integrated SIM card reader. This ultra compact Dual-Band GSM Terminal can be powered by a wide range of voltages. It is R&TTE, GCF and E-Marking approved.

- GSM dual band (900/1800 MHz)
- Large input voltage range
- Standard interfaces
- Integrated SIM card holder
- SIM Application Toolkit
- Extended AT commands for industrial apps

TC65 Terminal

SIEMENS

The TC65 Terminal sets unprecedented standards in the field of machine-to-machine communication. Based on the advanced TC65 module the intelligent Terminal version combines the most powerful and universally accepted Java™ open software platform with a wide range of industrial interfaces, to produce a smart plug & play solution in a growing M2M market.

Having the latest Information Mobile Profile NG embedded the TC65 terminal offers the opportunity to control M2M applications by using internal resources such as a powerful processor as well as the ability to simplify over-the-air software updates (OTA) for reliable e-maintenance of applications. Furthermore the future proved standard allows secure data transmission using https and PKI encryption. Last but not least Quad-Band technology allows applications to be used globally and the software development kit included is license free.

A wide range of industrial interfaces and the plug & play functionality included allow quick and easy implementation, reduces your costs significantly and lowers the entry barriers to a wide number of business fields such as: fleet management, security, vending machines or remote control. With its extended temperature range it is also the perfect stand-alone device for sophisticated M2M solutions.

Thanks to its full type approval (FTA), there is no worry about obtaining appropriate certification anymore - the TC65 comes with approvals from major mobile network carriers across the globe, including those from US operators.

- Robust housing
- Range of standard interfaces (I²C bus, SPI bus, ADC, serial, audio, 10 GPIOs and a SIM card interface)
- Java - CLDC 1.1, IMP2.0
- I2C bus interface
- High-performance processor (ARM7)
- Quad-Band: GSM850/900/1800/1900
- GPRS Multislot Class 12
- TCP/IP Stack via AT commands

Communications - USB / UART/ RS-232

USB / Ethernet-Solved Development Kit

cyan

New

The USB / Ethernet-Solved Development Kit allows projects based around USB and Ethernet to be created quickly and easily. It builds on the USB-Solved™ and Ethernet-Solved™ frameworks to give complete solutions in a matter of minutes. Add USB or Ethernet functionality to an existing embedded system, or create new solutions using this development kit as a foundation.

Features:
- Cy-Solved™ solution for Ethernet and USB embedded applications
- Ready-to-Run eCOG1X microcontroller project example templates including webserver utilising FAT file system on USB memory stick
- Easy customisation using free of charge CyanIDE®2 tools
- Drag and drop software components, including USB and Ethernet stacks
- Includes unrestricted CyanIDE2 IDE, compiler, toolchain and high speed eICE dongle

CY3674 EZ-USB FX1 Development Kit

The development kits for the EZ-USB FX1™ family provide complete hardware and software solutions for accelerating the firmware and device driver development for all the products in the family. The development kits use the actual silicon for the entire development.

Kit Includes:
- EZ-USB Development Board with CY7C64713-128AXC
- Peripheral Board for Prototyping
- USB Cable
- RS232 9-pin to 9-pin Cable

HIgh Speed USB to ATA Reference Design Kit with EZ-USB AT2LP

This HIgh Speed USB to ATA Reference Design Kit supports the EZ-USB AT2LP (CY7C68320/CY7C68300B) products.

Kit Includes:
- Evaluation Board with CY7C68320 (EZ-USB AT2LP)
- ATA cable
- 40-pin to 44-pin adapter
- "Y" power adapter cable
- USB cable
- CY4615B Release Notes
- EZ-USB AT2LP Datasheet
- CD-ROM

CY4640 EZ-Host Mass Storage Reference Design

The CY4640 mass storage reference design is built on the highly flexible CY7C67300 EZ-Host device. It enables users to easily build applications that exchange data with USB mass storage class devices, such as digital still cameras, MP3 players, NAND Flash drives, hard disk drives, and flash card readers. A robust set of API at both the File I/O and SCSI layers shortens development time and enables engineers to build their products with minimal or no knowledge of USB, the mass storage device class, or even the file system.

USB-to-UART/FIFO Interfaces

32-Pin LQFP Package

48-Pin LQFP Package

USB TO RS232 Serial Converter Cable

USB To TTL Level Serial Converter Cable

This range of USB-to-UART/FIFO controllers are designed to have a high functionality as well as a low component count. A number of configurations are available. All are USB2.0 compatible and also UHCI/OHCI and EHCI controller compatible. They include an integrated an Intergrated 6MHz -48MHz clock multiplier and use a 4.35 to 5.25V single supply operation.

Features:
- Integrated 3.3V Regulator for USB I/O
- EEPROM programmable on-board vis USB
- Data transfer rate upto 1Mbps
- Full handshaking and modem interface signals
- 384byte Rx buffer/128 bute Tx buffer for high data throughput (FT232/245)
- UART interface supports 7/85 data bits, 1/2 stop bits (FT232/2232)
- Enhanced Bit-Bang Mode interface option, Multi-protocol Synchronous Serial Engine (MPSSE) interface option, MCU Host Bus Emulation Mode option (FT2232)

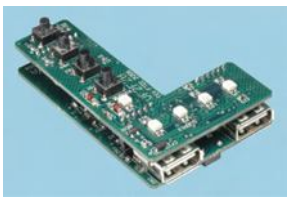
V-Eval Development Board

New



The V-Eval Kit is a hardware platform that designers can use to develop embedded USB host systems based on FTDI's VNC1L devices. Designs can be rapidly debugged using the "spy" mode of the supplied V-Eval software which displays the data sent between the VNC1L UART and a controller UART, for example a PIC.

Features:
- Inbuilt VNC1L USB device programmer/ terminal emulator/command monitor hardware
- Two VNC1L USB Host/Slave ports
- Generous prototyping area for standard DIP and SIL devices
- Multiple IO port connectors grouped by port name and/or function
- LEDs and switches for user interaction
- PS/2 keyboard and mouse ports
- Downloadable programming, terminal emulation and debug monitor software
- Downloadable HID class example project (VNC1L controlled USB rocket launcher) including PIC source code in C

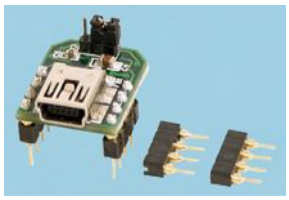
VF2F2 Reference Design Board

New

The VF2F2 is a reference design for a VNC1L based stand-alone application. VF2F2 illustrates how to construct a file back up device for a digital camera with a USB Mass Storage Class interface. At the push of a button, all the picture files on the camera are copied to a unique folder of a USB Flash drive so that the digital camera memory can be re-used to take further pictures.



This is an ideal accessory for digital camera users who wish to backup their photos on the road without having to carry a notebook PC, or for people who want to share or swap their photos without requiring a card reader. VF2F2 is powered by two AAA size alkaline batteries.

Features:
- Two USB "A" sockets connect to Digital Camera and USB Flash Drive respectively
- Uses FTDI's VNC1L device
- Single button file backup function
- Intelligent LEDs illustrate successful drive enumeration, file copy function & error conditions
- Onboard DC-DC converter supplies the circuitry with 5V & 3.3V power from 2x AAA cells
- Schematics, firmware and PCB Gerber files available for download

UB232R Mini Evaluation Module

New

The UB232R is ideal for new development purposes and also for adding a USB interface to existing product designs.
Based on the FT232RQ device, the UB232R supports RTS/CTS hardware handshaking and is powered from the USB port. Serial data communication is possible at up to 3MBaud at TTL level. In addition, two of the EEPROM configurable CBUS pins of the FT232R are brought out allowing the UB232R to be used to provide clock signals to external logic or signal traffic indicator LEDs.

Includes:
- Two 1x4 turned pin board headers with a standard 0.1" pitch

EVAL 232R Development and Evaluation Module

The EVAL232R is a USB to RS232 development and evaluation module for the FT232RL IC device. Additional header pins on the board provide access to the FT232RL device's configurable CBUS interface pins. Powered from USB, the EVAL232R supports both 5V and 3V level IO interface voltage on the CBUS via a jumper setting. Full RTS/CTS, and DTR/DSR hardware handshaking are supported, DCD and RI are also available. RS232 communication is possible at up to 250kBaud. LEDs are fitted to indicate activity on the FT232RL's TXD and RXD lines, thus showing when the module is transmitting, or receiving data.

Features:
- Data transfer rates from 300 baud to 1 Megabaud at RS232 levels
- Configurable CBUS I/O pins
- Device supplied preprogrammed with unique USB serial number
- On board jumper allows for selection of UART and CBUS interface IO voltage
- 5V / 3.3V / 2.8V / 1.8V CMOS drive output and TTL input
- Low operating and USB suspend current
- Low USB bandwidth consumption
- USB 2.0 Full Speed compatible
- -40°C to 85°C operating temperature range
- Connects to a PC via a standard USB A to B USB cable

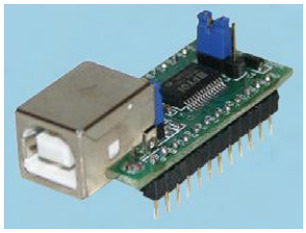
MM232R Mini Development Module



The MM232R is a mini development module for the FT232RQ IC device. It is a little bigger than a USB connector, and provides USB - Serial UART interface in an extremely small package. It is ideal for new development purposes, and also for adding a USB interface to existing product designs.Based on the FT232RQ device, the MM232R supports RTS/CTS hardware handshaking and is powered from the USB port. Serial data communication is possible at up to 3MBaud at TTL level. In addition, some of the EEPROM configurable CBUS pins of the FT232R are brought out allowing the MM232R to be used to provide clock signals to external logic.

Features:
- Entire USB protocol handled on the chip
- Configurable CBUS I/O pins
- Auto transmit buffer control for RS485 applications
- Transmit and receive LED drive signals
- Device supplied preprogrammed with unique USB serial number
- 3.3V to 5.25V Single Supply Operation
- Low operating and USB suspend current
- Low USB bandwidth consumption
- USB 2.0 Full Speed compatible
- -40°C to 85°C operating temperature range
- Connects to a PC via a standard USB A to B USB cable

UM232R USB - Serial UART Development Module

The UM232R module is a USB - Serial UART (TTL) development module for the FT232R IC device. It is Ideal for rapid prototyping and development of FT232R designs or for incorporation into low/medium volume finished product designs.
The UM232R is supplied on a PCB designed to fit a 24-pin DIP socket, and provides access to all UART and CBUS interface pins of the FT232R device. The UM232R can be configured as either USB bus-powered or self-powered and also supports 5V or 3V level interface IOs. Full hardware handshaking is supported and the UM232R can communicate at up to 3MBaud at TTL/CMOS levels.

Features:
- Auto transmit buffer control for RS485 applications
- Transmit and receive LED drive signals
- Device supplied preprogrammed with unique USB serial number
- Support for bus powered, self powered, and high-power bus powered USB configurations
- Integrated power-on-reset circuit
- 3.3V to 5.25V Single Supply Operation
- Low operating and USB suspend current
- Low USB bandwidth consumption
- USB 2.0 Full Speed compatible
- -40°C to 85°C operating temperature range
- Connects a PC via a standard A to B USB cable

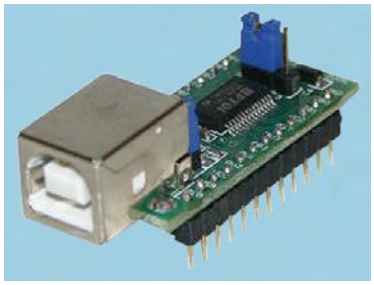
USB - RS232 Serial Converter Cables

US232R-10x

UC232R-10



The **UC232R-10** "ChiPi" is the economy version of FTDI's USB to RS232 converter cable range. It also serves as an evaluation cable for the FT232R. It utilises the minimum number of components required for a basic USB - RS232 converter designed using the FT232RL. Using the FT232R chip combined with an RS232 level converter and a few capacitors, the UC232R-10 "ChiPi" is a CE and FCC approved product which is one of the simplest USB - RS232 solutions around.

The **US232R-10x** is FTDI's premium USB to RS232 evaluation cable which can be used for testing the functionality of the FT232R device and drivers prior to design-in.The electronics, including the FT232RQ chip are housed in an attractive glossy white enclosure with blue, side-lit LED TX and RX traffic indicators. A matching white USB cable (10 or 100cm) uses gold plated USB and DB9 connectors.It is supplied with instructions and a Drivers and Utilities CD complete with Microsoft WHQL certified VCP drivers for Windows XP. Drivers for the Apple Mac, Linux and other versions of Windows are also included on the CD.

UM245R USB-Parallel FIFO Interface Development Module

The UM245R module is a USB - Parallel FIFO interface (TTL) development module for the FT245R IC device. It is Ideal for rapid prototyping and development of FT245R designs or for incorporation into low/medium volume finished product designs.
The UM245R is supplied on a PCB designed to fit a 24 pin DIP socket, and provides access to all FIFO interface and control pins of the FT245R device. The UM245R can be configured as either USB bus-powered or self-powered and also supports 5V or 3V level interface IOs. It can transfer data at up to 1 MegaByte per second.

Features:
- Single chip USB to parallel FIFO bidirectional data transfer interface
- FIFO receive and transmit buffers for high data throughput
- Device supplied preprogrammed with unique USB serial number
- Integrated power-on-reset circuit
- 3.3V to 5.25V Single Supply Operation
- Low operating and USB suspend current
- Low USB bandwidth consumption

Embedded USB Host Controller and Dev Module

VDIP1

VNC1L

The VDIP1 module is an MCU to embedded USB host controller development module for the VNC1L device. It is supplied on a PCB designed to fit into a 24 pin DIP socket, and provides access to the UART, parallel FIFO, and SPI interface pins on the VNC1L device, via its AD and AC bus pins.
The VNC1L is able to handle the USB Host Interface, and data transfer functions. Owing to the inbuilt MCU and embedded Flash memory, it can encapsulate the USB device classes as well.

RL Re-reeling available

Farnell

Communications - USB / UART/ RS-232 - continued

Embedded USB Host Controller and Dev Module - continued

When interfacing to mass storage devices it also transparently handles the FAT File structure; communicating via UART, SPI or parallel FIFO interfaces via a simple to implement command set.

VDrive2 Module

The VDRIVE 2 is possibly the easiest solution for adding a USB Flash drive interface to existing products. Only four signal lines plus 5V/GND require to be connected. Using the VDAP firmware, the interface can be selected between UART or SPI modes using the on-board jumpers.
It is ideal for use in commercial products such as domestic goods, set top box, etc. as well as industrial products such as data loggers, software upgradeable products, etc.

Features:
- Uses VNC1L embedded USB host controller IC device
- One USB "A" socket to connect to USB Flash disk
- Traffic indicator LED
- 2mm pitch 8-pin connector
- 8-way header interconnect cable provided
- Jumper selectable UART or SPI interface
- Single 5V supply input
- Uses VDAP firmware and command set
- Enclosure with snap in place clips allows for easy front panel mounting
- Program or update firmware via USB Flash disk or UART interface
- VNC1L firmware programming control pins PROG# and RESET# brought out onto internal jumper interface

VMusic2 Module

VMUSIC2 lets the user add USB Flash drive interfacing to their product and allows playback of MP3 and other popular digital music formats direct from a USB Flash drive. Extensions to the VDAP command set allow you to play a selected file as well as control the volume, balance, etc. of the sound channel and monitor the status of the file being played. It is ideal for adding MP3 playback from USB drive capability to home entertainment and in-car audio systems, as well as other appliances requiring audio playback capability from USB Flash drives.

Features:
- Uses FTDI's VNC1L device coupled with VLSI VS1003 IC for music playback
- One USB "A" socket to connect to USB Flash drive
- Audio line-out connector for audio playback
- Stereo 3.5mm headphone jack socket and audio line-out connector for audio playback
- Jumper selectable UART or SPI interface
- 2mm pitch 8-pin connector
- Single 5V supply input
- Traffic indicator LED
- Uses extended VDAP command set
- Program or update firmware via USB Flash disk or via UART interface
- VNC1L firmware programming control pins PROG# and RESET# brought out onto internal jumper interface

E-blocks USB 232 Interface board EB039

This interface board allows you to easily add a USB communications interface to your project. The board contains a FTDI FT232BL interface chip which provides an interface between a USB interface and a microcontroller UART using RS232 protocols. A virtual COM port driver is available which allows you to interface the board to Windows, MAC and Linux based applications including Visual Basic and Visual C++ etc. The FTDI device is able to communicate with data transfer speeds of up to 3M baud.

- Provides a USB PC interface for all your projects
- Data transfer rates of up to 3M baud
- E-blocks compatible
- USB 1.0 and USB 2.0 compatible

USB to Serial Interfaces

USB-232, SPI & I²C

USB-232 is a single chip USB to asynchronous serial interface. It greatly simplifies the connection of electronic devices to personal computer. In addition tothe standard signal lines, additional control lines have custom-defined functionality.
USB-SPI is a single chip USB to synchronous serial SPI slave interface. It greatly simplifies the connection of personal computer to a microcontroller capable of communicating in SPI master mode. In addition to the standard 4 SPI control lines, 11 additional Virtual I/O lines have custom-defined functionality.
USB-I2C is a single chip USB to synchronous serial I2C slave interface. It greatly simplifies the connection of personal computer to a microcontroller capable of communicating in I2C master mode. In addition to the standard 2 I2C control lines, 11 additional Virtual I/O lines have custom-defined functionality.
All these devices use the Human Interface Device (HID) USB profile. they does not require USB driver installation, therefore are compatible with present and future Windows, Linux and Mac operating systems.

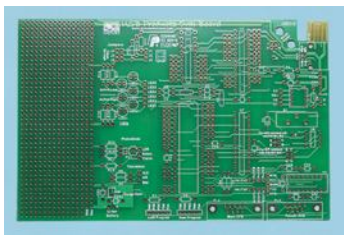
MA180021 PIC18F87J50 Full Speed USB Plug-In Module

New



The PIC18F87J50 FS USB Plug-In Module (PIM) Demonstration Board and Kit is designed as an easy-to-use evaluation platform for Microchip's Full-Speed USB PIC18F87J50 family of microcontrollers. The PIM may be operated either stand-alone, or in conjunction with the HPC Explorer board.
These devices fully support USB 2.0 full-speed and low-speed serial communications at signalling speeds of 12 Mbit/s or 1.5 Mbit/s. The demonstration kit provides all of the hardware and software needed to develop officially compliant USB communication solutions.

Features:
- PIC18F87J50 FS USB Plug-In Module demonstration board, preprogrammed with USB Human Interface Device (HID) class mouse demonstration firmware
- A standard USB mini-B cable for power and communication
- PICDEM FS USB Starter Kit CD-ROM, containing USB firmware projects, Microchip's custom class USB driver and USB-specific documentation including user guide

USB Evaluation Board

New

The USB Evaluation Board is a circuit board for evaluating USB products from Firmware Factory. In any given evaluation, only a small proportion of the components will be fitted. For this reason it is supplied unpopulated and uses through-hole components for easy manual construction.

The unpopulated board includes provision for:
- 20-pin, 28-pin and 40-pin DIL USB devices
- Type B socket, suitable for standard USB cables
- Type A plug, suitable for USB extension cables
- Prototyping area
- RS232 line driver, 9-pin sockets in DTE and DCE configurations
- RS485 line driver
- Coin cell battery
- SPI serial memory
- 28-pin DIL host processor
- 3 active low LEDs
- 3 active high LEDs
- 3 jumpers
- Photodiode
- Thermistor

USB host, peripheral and On-The-Go controllers

New

- The OXU210HP is a single-chip, high-speed USB host and high-speed USB peripheral controller with integrated transceivers. It is the fourth controller in the family of integrated, low-cost, high-performance, On-The-Go controllers that have been specifically designed for embedded systems
- The OXU140CM is a single-chip USB On-The-Go controller that incorporates a full-speed host controller, a high-speed peripheral controller and multi-storage interface support, which includes a CE-ATA HDD controller and a MMC/SD memory controller
- The OU121HP is a single-chip full-speed host, high-speed peripheral and On-the-Go controller enabling embedded systems to operate as both USB host and peripheral. The combination of the high-speed peripheral and full-speed host controller enables users to perform high speed USB data transfer for peripheral connectivity when connected to a host device, while operating at full speed in host mode operation to maximize system battery life in a mobile environment
- The OXU200 is a low-cost, single-port, USB high speed peripheral controller that enables embedded systems to perform high-speed USB data transfer for peripheral connectivity when connected to a USB host
- The TD242LP allows products to operate as either a USB host or a USB peripheral, and can perform both functions simultaneously, enabling many new applications for USB, especially in low power, mobile markets
- The TDUHC122 is a two-port, single chip USB host controller. It is a non-PCI controller that supports full speed(12Mb/s) and low-speed (1.5Mb/s) USB devices. It can be interfaced to CISC or RISC microprocessors, microcontrollers, or DSP's and is ideal for providing USB host functions to a wide range of applications.

USBIO24 Digital I/O Module

The USBIO24 module is designed to facilitate the input and/or output of digital signals from a computer system by connection to the USB port. The module features 24 5V level signal lines individually programmable as input or output as well as capabilities for further expansion via the expansion port. As the module connects to the USB port, multiple modules can be connected to a single PC by the use of a USB hub or hubs. Each module features a serial number and the PC can identify each module uniquely allowing for multiple modules to be connected for a single application. The outputs of the module are able to source or sink up to 30mA per I/O to allow for direct connection to a variety of devices.

Module Features:
- 24 independently programmable Input / Output Pins Grouped into 3 ports
- Single module High-Speed Digital Input / Output solution
- Up to 128 modules can be connected to a single PC with capabilities of further expansion
- Easy to connect by 0.1" pitch headers to suit standard IDC connectors
- Integrated Type-B USB Connector
- On-board unique serial number in EEPROM and custom programmable FLASH microcontroller
- Both USB Enumeration information and Microcontroller can be re-programmed to suit customer needs
- Module powered by the USB from the PC

Module Standard Firmware & Software:
- Virtual Comm Port driver allows access as a regular serial port
- Optional DLL based driver available
- Easy to program from popular languages C, Basic, Delphi, etc.
- Simple command set for easy control of ports and data transfer

USB-to-UART Bridge

This highly-integrated USB-to-UART bridge controller is designed to provide a simple solution for updating RS-232 designs to USB. The CP2101/2 include a USB 2.0 full-speed controller, transiever, oscillator, EEPROM and UART. The devices come in a 28-pin MLP 5x5mm package and aims to reduce the number of components and PCB space, no other external USB components are required. Also available is an evaluation kit, this includes a USB-to-UART/RS232 evaluation board, USB/RS232 cables and full documentation as well as the Virtual COM Port (VCP) drivers which are required to operate the devices. The VCP drivers work with existing COM port applications and use Linux, Macintosh or Windows (98/2000/XP) systems. Possible applications for the USB-to-UART bridge include USB to RS-232 adapters and USB to mobile phone connections.

Multi Channel UART

OXFORD SEMICONDUCTOR

Feature	Benefit
High performance 950-type UART	High baud rates up to 15Mbps asynchronous, 60Mbps synchronous
128-byte deep transmit and receive FIFOs	Lowers CPU interrupts resulting in better performance
RS232/422/485 full & half duplex	Supports greatest range of commercial and industrial applications
8/32-bit Local Bus expansion port	Allows 8, 12, and 16 port designs
Can be configured as 16C550 16C650 or 16C750 type UART	Allows them to work with generic drivers
Optional serial EEPROM	Allows customisation - can overwrite default registry values
Meets PCI standards	Assured interoperability

Oxford Semiconductor integrates the fastest available UART's together with large transmit and receive buffers to achieve a broad portfolio of high performance serial communication bridges. The range includes PCI, miniPCI, Compact Flash and 16/32 bit PC Cards providing bridges and port expansion solutions for a wide range of products including, add-on cards, industrial PC, EPOS, network management and wireless data cards.

Communications - PCI

PCI to Hi-USB Controller Rapid Development Kits

These Hi-Speed USB development kits transform standard Windows PCs into USB peripherals, which enables USB device and host software development on PCs, even before final hardware is ready.

Features:

- PCI-based development kits allow easy installation to quickly setup a development platform
- Enables development of firmware, host drivers, and applications even before the final hardware is ready
- USB 2.0 device emulation
- USB firmware and APIs are provided to simplify software development
- Free 30 days evaluation version of Jungo's WinDriver

NetChip™ PCI to Hi-Speed USB Controllers

These controllers offer superior performance, strict compliance to industry standards, and dramatic power savings. They are utilised in a variety of peripherals like printers, digital cameras, mobile phone, WLAN devices etc.

Controller Features:

- Fast Data Transfer Rates
- Migration of PCI Designs to USB
- Significant Power Savings
- Smallt Footprint
- Software-ready Solution

Expresslane™ PCI Switches

These fully configurable PCI switches offer PCI Express switching capability conforming to the PCI Express specification r1.1. These switches enable users to add low cost, scalable high bandwidth switching and well as both fan-in/out and peer-to-peer features to a wide variety of applications.

Features:

- Highly Flexible Port Configurations
- Lowest Power and Lowest Latency
- Non-Transparent Port Capability
- True Peer-to-Peer Data Transfer
- Hot-Plug Support

NOTE: For datasheets on these products please visit the manufacturers website.

PCI Bridges

Expresslane™, Fastlane™ and PCI 9000 Series

The **ExpressLane™ PCIe (PEX)** family are high performance PCI Express-to-PCI bridges that are fully-compliant with the PCI Express Base 1.0a, 1.1 and 2.0 specifications, enabling designers to migrate legacy PCI bus interfaces to the new advanced serial PCI Express.

The **PCI 9000 Series** is a broad range of general-purpose, PCI-to-local bus bridges. They are available as PCI Bus Master I/O Accelerators or PCI Target I/O Accelerators.

The **FastLane™ PCI 6000** series is a broad range of PCI-to-PCI and PCI-X to PCI-X bridges. These bridges allow more devices to be attached to a PCI bus as well as providing the ability to include intelligent adapters on a PCI bus.

PEX8112 Rapid Development Kit

These rapid development kits assists in evaluating the PEX 8112 PCI Express-to-PCI bridge device. They are complete hardware and software development platforms that can be used to get designs up and running quickly, reduce any risks and lower the time-to-market.

Features:

- PLX PCI-to-PCI Express bridge device
- Single 32-bit PCI Edge connector
- Single PCI Express slot
- DIP switches for PEX 8112 hardware configuration
- Socketable SPI serial EEPROM
- Onboard probing points and logic analyzer connections
- LEDs for link status

PEX8114 Rapid Development Kits

These rapid development kits assists in evaluating the PEX 8114 PCI Express-to-PCI/PCI-X bridge device. They are complete hardware and software development platforms that can be used to get designs up and running quickly, reduce any risks and lower the time-to-market.

Features:
- PLX PCI Express-to-PCI/PCI-X bridge device
- Single 64-bit PCI/PCI-X board edge connector
- Single PCI Express slot
- Socketable serial EEPROM
- Lane Status Indicator LEDs
- Auxiliary ATX four-pin hard-drive connector
- DIP switches for PEX 8114 hardware configuration
- On-board PCI Express RefClk generator
- On-board probing points
- On-board manual Reset switches

This rapid development kit assists in evaluating the PEX 8311PCI Express-to-local bus bridge device. The kit is a complete hardware and software development platform that can be used to get designs up and running quickly, reduce any risks and lower the time-to-market.

Features:
- PLX PCI Express-to-PCI bridge device
- One PCI Express Edge connector
- Supports 32-bit C or J mode
- 128KB synchronous burst SRAM
- CPLD memory controller
- Jumpers
- Socketable SPI
- Microwire serial EEPROMs
- Onboard probing points and logic analyzer connections
- LEDs for link status
- Auxiliary ATX hard disk connector
- Prototyping area
- Pushbutton reset module
- Socketed oscillator
- PLX J-Bus Option Module (POM) connector
- Option for reference clock generation

PCI9030 Rapid Development Kit

This rapid development kit is designed for use with the PCI 9030 target I/O accelerator. The kit and it's extensive support allows a user to quickly and easily add PCI to a variety of embedded applications in telecommunications, data communications and other applications.

Features:
- A PCI v2.2 prototype adapter board
- Industry standard surface mount footprints
- ISA connector footprint
- 25 x 25 0.1" through-hole grid expansion
- PLX SDK-LITE with PLXMon
- All relevant documentation
- 100-pin PLX Option Module (POM) connector
- One sample PCI 9030 chip

PCI9054 Rapid Development Kit

This rapid development kit is a PCI bus master prototyping kit. The kit provides a low-cost development environment for PCI 9054 embedded application designs.

Features:
- PCI r2.2 compliant
- The PCI 9054 I/O Accelerator
- CPLD Local Bus memory controller and 128KB SRAM
- PLX Option Module (POM) expansion connector
- Industry standard surface mount footprints
- 30x25 0.1" through-hole grid expansion
- Complete design documentation
- Complete windows host software development environment

PCI9056 Rapid Development Kit

The rapid development kit provides a provides a comprehensive design and development environment for the PCI 9056 bus master I/O accelerator. The kit supports PICMG2.1 r2.0 hot swap and provides reusable hardware and software components to shorten design cycles.

Features:
- PICMG 2.0 r3.0 compliant
- A PCI 9056 I/O Accelerator
- 4Kb EEPROM, 8.5 MB Flash and 64MB SDRAM
- CPLD Local Bus memory controller and 512KB SBSRAM
- One 10/100 Mbit Ethernet port
- Two RS-232 serial ports
- PLX Option Module (POM) expansion connector
- MPC860 BDM development port
- 0.1" through hole grid space
- Comprehensive software development environment
- Complete design documentation

PCI 9056RDK-LITE	PCI9056 Rapid Development Kit - Lite	162-3136●	842.44

PCI9656 Rapid Development Kit

The rapid development kit provides a provides a comprehensive design and development environment for the PCI 9656 bus master I/O accelerator. The kit supports PICMG2.1 r2.0 hot swap and provides reusable hardware and software components to shorten design cycles.

Features:
- PICMG 2.0 r3.0 compliant
- A PCI 9656 I/O Accelerator
- 4Kb EEPROM, 8.5 MB Flash and 64MB SDRAM
- CPLD Local Bus memory controller and 512KB SBSRAM
- One 10/100 Mbit Ethernet port
- Two RS-232 serial ports
- PLX Option Module (POM) expansion connector
- MPC860 BDM development port
- 0.1" through hole grid space
- Comprehensive software development environment
- Complete design documentation

PCIe Clock Buffers

PERICOM Semiconductor Corporation

New

The PI6C21200 are high-speed, low-noise PCI-Express differential clock buffers. The output frequency can be ratioed to offer a derivative frequency from the input frequency. Each differential output is controlled by an individual OE pin, except OUT10 and OUT11.
The clock outputs are controlled by input selection of SA_0, SA_1, SA_2 via SMBus, SCLK and SDA.

Features:
- Twelve Pairs of PCI-Express Differential Clocks (HCSL compatible signaling)
- Low skew < 50ps
- Low jitter < 50ps
- Output Enable for all outputs
- Outputs tristate control via SMBus
- Power Management Control
- Programmable PLL Bandwidth
- PLL or Fan out operation
- Gear Ratio supporting different output frequencies
- 3.3V Operation

PCIe ReDrivers™

PERICOM Semiconductor Corporation

New

These ReDriver™ products focus on the demands of high-speed serial interfaces in the form of signal conditioners that adjust and correct for signal level attenuation and noise (jitter) using equalization, pre-emphasis/de-emphasis techniques resulting in the eye pattern at the receiver end having the margins needed to deliver low bit error rates with high-speed signal protocols including PCI Express and other popular standards.

PCIe Signal Switches

PERICOM Semiconductor Corporation

New

The **PI2PCIE2412** & **PI2PCIE412-D** are 8 to 4 differential channel multiplexer/demultiplexer switches. This solution can switch 2 full PCI Express, Gen-II, lanes to one of two locations. Using a unique design technique, the impedance of the switch has been minimised such that the attenuation observed through the switch is negligible. It also offers a layout targeted for PCI Express signals, which minimises the channel to channel skew as well as channel to channel crosstalk as required by the PCI Express specification.

PI2PCIE2412ZHE Features:
- 4 Differential Channel, 2:1 Mux/DeMux
- PCI Express, Gen II Performance, 5.0Gbps
- Low Bit-to-Bit Skew , 7ps max (between '+' and '-' bits)
- Low Crosstalk: -23dB@3 GHz
- Low Off Isolation: -23dB@3 GHz
- VCC Operating Range: +1.5V to +2.0V
- ESD Tolerance: 8kV HBM I/O; 2kV HBM select pin
- Low channel-to-channel skew, 35ps max

PI2PCIE412-DZHE Features:
- 4 Differential Channel, 2:1 Mux/DeMux
- PCI Express signal compliance
- Low Bit-to-Bit Skew , 10ps max (between '+' and '-' bits)
- Low Crosstalk: -65dB@10 MHz
- Low Off Isolation: -65dB@10 MHz
- VCC Operating Range: +1.5V to +2.0V
- ESD Tolerance: 8kV HBM I/O; 2kV HBM select pin
- Low channel-to-channel skew, 35ps max

PCI Bridges

PERICOM Semiconductor Corporation

New

The **PI7C7300D** is designed to be fully compliant with the 32-bit, 66MHz implementation of the PCI Local Bus Specification, Revision 2.2.
It supports only synchronous bus transactions between devices on the Primary Bus running at 33MHz to 66MHz and the Secondary Buses operating at either 33MHz or 66MHz.
The Primary and Secondary Buses can also operate in concurrent mode, resulting in added increase in system performance.
Supported features include: Support for up to 15 devices on the Secondary Buses, Compact PCI Hot Swap (PICMG 2.1, R1.0) Friendly Support and Dual Addressing Cycle.
The **PI7C8140A** PCI-to-PCI Bridge is designed to be fully compliant with the 32-bit, 66MHz implementation of the PCI Local Bus Specification, Revision 2.2.
It supports synchronous bus transactions between devices on the Primary Bus and the Secondary Buses operating up to 66MHz. Both primary and secondary buses must operate at the same frequency. The primary and secondary buses can also operate in concurrent mode, resulting in added increase in system performance.
The **PI7C9X110** is a PCIe-to-PCI/PCI-X bridge. It is compliant with the PCI Express Base Specification, Revision 1.0a, the PCI Express Card Electromechanical Specification, Revision 1.0a, the PCI Local Bus Specification, Revision 3.0 and PCI Express to PCI/PCI-X Bridge Specification, Revision 1.0.
It supports transparent and non-transparent mode of operations. And also forward and reverse bridging.
Theconfiguration registers are backward compatible with existing PCI bridge software and firmware. No modification of PCI bridgesoftware and firmware is needed for the original operation.

PCI/PCIe to PCI Bridges

Texas Instruments

New

These PCI-to-PCI bridges make it possible to extend a system's load capability limit by allowing motherboard designers to add more PCI devices, or more PCI option card slots, than a single PCI bus can support.
The PCI2050B supports 66-MHz, 32-bit systems requiring synchronous clocking, while the PCI2060 also supports 66-MHz, 32-bit systems, it also provides asynchronous clocking options. The PCI2250 allows bridged transactions to occur concurrently on both buses as well as supporting burst-mode transfers. The XIO2200 and DS2000 bridges support PCIe to PCI translation.

PCI Controllers/Hot Plugs

These PCI Controllers provide many features that make them the best choice for bridging PCI to PC Cards, PCI to CardBuses and PCI bus to DSP host ports.
These PCI Hot plug controllers support the hot insertion/removal of hot-plug slots on PCI and PCI Express buses. While the HPC3130A provides automatic bus connection sequencing and supports a protocol for connection during bus idle conditions, the TPS2363 is a dual-slot PCIExpress hot plug controller with SMBus control and monitoring functions.

Expresso PCIe Family Evaluation Kits

EK-OXPCIE952

EK-OXPCIE954

EK-OXPCIE958

EK-OXPCIE840

Design and evaluation of the Expresso PCIe familiy couldn't be easier with the EK-OXPCIe comprehensive evaluation kits. The kits include everything needed for PC installation and evaluation including Hardware, parallel port expansion bracket, Oxide Development Tools and software device drivers. Simply plug the half length PCI Express® evaluation board into any PCI Express® slot, install the software and its ready to go.

Kit Contents:
- Evaluation board
- Oxide CD
- Sample Expresso PCI Express® devices
- Parallel or serial port expansion bracket
- 4-way serial breakout cables (OXPCIe958 and OXPCIe954 only)

Expresso High Performance PCI Express® Bridges

These bridges are part of Oxford Semiconductor's Expresso family of high performance PCIe devices. Together they combine 15Mbps asynchronous data rates and deep FIFOs from Oxford Semiconductor's ultra high performance 950 UART, advanced MSI interrupt handling, bus master DMA, high performance parallel port technology and port expansion interfaces.

Features:
- ExpressCard™, Mini CARD™ & AIC compatible
- PCIe base spec 1.1
- MSI/MSI-X compatible
- Device parameters configurable via EEPROM
- 1.8 V, 2.5 V, or 3.3 V GPIO voltages
- Broad device driver support

EV-TD124-UHC124-PCI Evaluation Board

This evaluation board is a system for TD124 customer evaluations and internal software development. It allows the user to install and use the TD124 in any PCI based computer. Application software running on the system has access to the TD124 via the PCI memory space. It can be used without the PCI104 PCI Bridge Board.

The EV-TD124-UHC124-PCI allows customers to:
- Evaluate the Oxford Semiconductor UHC124 USB host controller
- Run TD124 demonstrations
- Develop user software for TD124-UHC124 based applications

PCI Evaluation Card EV-OX16PCI958

The OX16PCI958 evaluation board allows users to test applications based on the device features of the OX16PCI958. The board can handle up to eight serial ports at configurable send and receive rates up to 230,400 baud. It has a PCI host interface with a universal slot key which makes it suitable for connection to a PCI bus using either the 3.3-V or 5-V standard. Once installed and configured by the host OS, the OX16PCI958 provides an eight-byte programming interface to each UART. The UARTs are fully software-compatible with 16C550 devices and all ports support RS232. In addition, the board provides an edge connector and a header connector, allowing users to obtain the signals from the eight UARTs

- 8 OX16PCI958 UARTs
- 25 way parallel port
- Serial EEPROM socket
- Internal crystal oscillator
- Two 4 way serial lead is suppiled for connection to the board

PCI Evaluation Card EV-OXCF950-TQFP

The OXCF950 rev B is a low cost asynchronous 16-bit PC PCMCIA card or Compact Flash UART device. Local Bus Selection is performed by use of a MODE pin. The Local Bus mode uses indirect addressing, which is only supported by PCMCIA.The single channel ultra-high performance UART offering data rates up to 15Mbps and 128-deep transmitter and receiver FIFOs. Deep FIFOs reduce CPU overhead and allow utilisation of higher data rates.

- Single full-duplex asynchronous channel
- 128-byte readable deep transmitter / receiver FIFO
- Full software compatible with industry standard 16C550 type UARTs
- System clock up to 60MHz
- Programmable by external MicrowireTM EEPROM (EEPROM programmed via Oxford Semiconductor utilities)
- Extremely low power consumption by use of asynchronous UART core and power down (sleep) modes
- Supports all UART types 450 up to 950 (fully programmable)
- Flexible clock prescaler from 1 to 31.875
- 2 Multi-purpose I/O pins which can be configured as interrupt inputs
- Automated in-band flow control using programmable Xon/Xoff characters
- Detection of bad data in the receiver FIFO
- 9-bit data framing as well as 5,6,7 and 8

PCI Express, Hot-Plug Controllers

These single, dual, triple and quad hot-plug controllers are designed for PCI Express (PCIe)® applications. They provide hot-plug control for the main 12V, 3.3V and 3.3V auxiliary supplies of (dependant of device ordered) up-to four PCIe slots.
The logic inputs/outputs of all these devices allow interfacing directly with the system hot-plug management controller or through an SMBus™ with an external I/O expander. An integrated debounced attention switch and present-detect signals simplify system design.

Features:

- PCI Express Compliant
- Hot Swaps 12V, 3.3V, and 3.3V Auxiliary
- Integrated Power MOSFET for Auxiliary Supply Rail
- Active Current Limiting Protects Against Overcurrent/Short-Circuit Conditions
- Programmable Current-Limit Timeout
- PWRGD Signal Output with Programmable Power-On Reset (POR) (160ms Default)
- Latched FAULT Signal Output after Overcurrent or Overtemperature Fault
- Attention Switch Input/Output with 4ms Debounce
- Present-Detect Input
- Forced-On Input Facilitates Testing
- Thermal Shutdown
- Allows Control through SMBus with an I/O Expander

Communications - Ethernet

ATNGW100 Network Gateway Kit

The NGW100 has many functions, it can be used as a router and as a USB mass-storage device when an SD-card is inserted. It also allows user to create dynamic web pages. It is also an ideal development board for the AT32AP7000. All resources are available, and it supports communication on any of the device's communication interfaces. The board is preloaded with Linux and shipped with I/O interface drivers that can be called from your own code.
The NGW100 has two Ethernet ports, SD and MMC card reader, and connectors for USB and JTAG.

E-blocks Internet Board EB023

Based on the W3100A hardwired TCP/IP stack chip from WizNET, this E-blocks board adds Ethernet functionality to an existing microprocessor based system without the necessity of a developing the TCP/IP software stack. As well as the Ethernet protocol the module supports 10/100 connection and a number of protocols including UDP, IP, ARP, ICMP, DCHP, ARP, DLC and MAC. The unit interfaces to a microprocessor using I2C serial communication. The patch jumpers on the board allow more than one Ethernet module to be connected to the I2C bus. Flowcode macros for this E-block are available in the Professional version of Flowcode.

PICDEM.net 2 Development Board

The PICDEM.net™ 2 Development Board (DM163024) is an Internet/Ethernet development board supporting both the popular ENC28J60 Ethernet Controller and the single-chip Ethernet microcontroller family, the PIC18F97J60. With this board, using Microchip's free TCP/IP stack, a web server can be developed showcasing the capability to remote monitor and control embedded applications over the Internet.

Features:
- Web server with HTML support
- Microchip free TCP/IP stack support
- 2 x Ethernet interface (RJ-45 connector)
- PICtailTM connector for future expansion boards
- 16 x 2 character alpha-numeric LCD display
- ICSP™/MPLAB ICD 2 interface connector for in circuit programming and debugging
- Programmable buttons/LEDs
- Temp sensor
- RS-232/RS-485 interface
- Real time clock

PICtail Ethernet Board

The Ethernet PICtail™ Daughter Board provides a cost-effective method of evaluating and developing Ethernet control applications. The board is designed for flexibility and can be plugged into a wide selection of Microchip's standard PICDEM™ demonstration boards. The development board is populated with the 28-pin ENC28J60 Ethernet controller which interfaces to the RJ-45 female connector. With a standard 28-pin PICtail pin out, the board is easily interfaced to Microchip's 8-bit demonstration boards.

Features:
- 10BASE-T Ethernet
- RJ-45 Female Ethernet Connector
- Plug in compatible with these evaluation and demonstration boards

- PICDEM HPC Explorer (DM183022)
- PICDEM LCD Demonstration Board (DM163028)
- PICDEM Z Zigbee Demonstration Board (DM163025)

Ethernet PICtail Plus Daughter Board

The Ethernet PICtail™ Plus Daughter Board provides a cost-effective method of evaluating and developing Ethernet control applications. The board is designed for flexibility and can be plugged into Microchip's Explorer 16 (DM240001) development boards. The development board is populated with Microchip's 28-Pin ENC28J60 Ethernet controller which interfaces to the RJ-45 female connector. When used in conjunction with the Microchip TCP/IP stack the Ethernet PICtail Plus daughter board allows a developer to connect any Microchip 16-bit product to the Ethernet.

Features:
- IEEE 802.3 Compliant
- 10BASE-T Ethernet
- RJ-45 Female Ethernet Connector
- Plug in compatible with the Explorer 16 Development Board (DM240001)

78Q21x3-DB MicroPHY™ MII Evaluation Boards

Kits Include:
- MicroPHY MII Demo Board
- Demo Board Parts List
- P.C.B. Gerber Files
- Demo Board schematic
- MicroPHY Data Sheet

The 78Q21x3-DB is a design example for a 10/100BASE-TX Mbit/second Fast Ethernet MII Interface adaptor. A **78Q2123** or **78Q2133** MicroPHY transceiver provides the network physical interface and MII (Medium Independent Interface) interface.
Full-featured MII management functions are included along with an extended register set. The MicroPHY interfaces to CAT5 UTP cable via a 1:1 transformer.
The transceiver's transmitter includes on-chip the pulse shaper and low power line driver. The receiver incorporates a sophisticated combination of real-time adaptive equalization, an adaptive DC offset adjustment circuit and baseline wander correction. Smart squelch circuitry further improves the receiver's noise rejection. Full featured autonegotiation or parallel detect modes are supported.

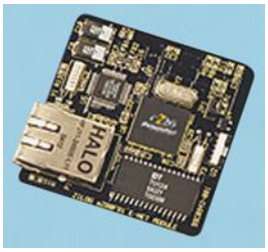
10/100 Ethernet PHYs

The 78Q2123 and 78Q2133 MicroPHY are the smallest Fast Ethernet PHY available that provides a full 802.3 Media Independent Interface (MII) to the system Media Access Controller. The MicroPHY includes integrated MII, ENDECs, scrambler/descrambler, dual-speed clock recovery, and full-featured auto-negotiation functions. The transmitter includes an on-chip pulse-shaper and a low-power line driver. The receiver has an adaptive equalizer and a baseline restoration circuit required for accurate clock and data recovery. The transceiver interfaces to Category-5 unshielded twisted pair (Cat-5 UTP) cabling for 100BASE-TX applications, and Category-3 unshielded twisted pair (Cat-3 UTP) for 10BASE-T applications. The MDI is connected to the line media via dual 1:1 isolation transformers. No external filter is required. Interface to the MAC is accomplished through an IEEE-802.3 compliant Media Independent Interface (MII).

The 78Q8392L Ethernet Transceiver is a low powerBiCMOS coax line transmitter/receiver. The device includes analog transmit and receive buffers, a 10MHz on-board oscillator, timing logic for jabber and heartbeat functions, output drivers and bandgap reference, in addition to a current reference and collision detector. This transceiver provides the interface between the single-ended coaxial cable signals and the Manchester-encoded differential logic signals. Primary functional blocks include the receiver, transmitter, collision detection and jabber timer. This IC may be used in either internal or external MAU (Medium Attachment Unit) environments.

78Q2123/2133 Features:
- 10BASE-T/100BASE-TX IEEE-802.3 compliant TX and RX functions requiring a dual 1:1 isolation transformer interface to the line
- Integrated MII, 10BASE-T/100BASE-TX ENDEC, 100BASE-TX scrambler/descrambler, and full featured auto-negotiation function
- Full duplex operation capable
- Automatic MDI/MDI-X cross over correction
- Register-programmable transmit amplitude
- Automatic polarity correction during autonegotiation and 10BASE-T signal reception
- Power-saving and power-down modes including transmitter disable
- 2 Programmable LED indicators (Link and Activity by default)
- User programmable Interrupt pin
- Low Power (~290mW)
- Single 3.3 V ± 0.3V Supply



78Q8392 Features:
- Single chip solution
- Compliant with ethernet II, IEEE 802.310Base5 AND 10Base2
- Integrates all transceiver functions except signal and power isolation
- Innovative design minimises external component count and power consumption
- Jabber timer function integrated on chip
- Externally selectable CED hearbeat allows operation with IEEE 802.3 compatible repeaters
- Squelch circuitry at all inputs rejects noise
- Power-on reset and test modes

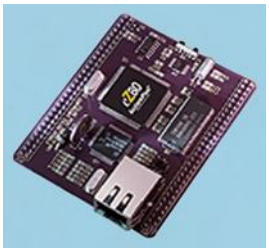
eZ80F91/92 Development Tools



ZiLOG

New

The eZ80F91 Mini Enet Module for the eZ80AcclaimPlus! family is a compact, high-performance Ethernet module which is designed for development and deployment of embedded systems requiring remote control and Internet/Intranet connectivity.
This module is expandable and is powered by the eZ80AcclaimPlus! F91 Ethernet ASSP - Zilog's latest Ethernet Flash controller, featuring a power-efficient, high-speed, optimized pipeline architecture.

Features include:
- Factory-default 5 MHz crystal oscillator input
- 10/100 BaseT Ethernet PHY with RJ45 connector
- 128 KB external high-speed SRAM
- 256 KB on-chip Flash memory
- 8 KB on-chip SRAM
- Real-Time Clock support
- I/O connector provides 32 general-purpose 5 V-tolerant I/O pinouts
- Small footprint 50 mm x 47.5 mm
- 3.3 V power supply
- Standard operating temperature range: 0 to +70 °C

This compact, high-performance Zdots SBC has been created for the rapid deployment of embedded systems. The Zdots eZ80F91 SBC operates at 50MHz, with 256KB on-chip Flash memory and 16KB of internal SRAM. An additional 512KB of off-chip SRAM, 1MB of Flash, and a 10/100BaseT Ethernet PHY with an RJ-45 connector are also provided.

Features include:
- eZ80F91 eZ80AcclaimPlus!™ Connectivity ASSP
- IrDA transceiver
- 2 x 60-pin system expansion interface with full MPU bus/control signals
- LED
- Standard operating temperature: 0°C to 70°C
- 3.3V @ 125mA

DP83815 Ethernet Controllers

National Semiconductor

New

The DP83815 is a single-chip 10/100 Mb/s Ethernet Controller for the PCI bus.
This device fully implements the V2.2 33 MHz PCI bus interface for host communications with power management support. Packet descriptors and data are transferred via bus-mastering, reducing the burden on the host CPU. It can support full duplex 10/100 Mb/s transmission and reception, with minimum interframe gap.

Features Include:
- Bus master - burst sizes of up to 128 dwords (512 bytes)
- Clkrun function for PCI Mobile Design Guide
- Virtual LAN (VLAN) and long frame support
- Support for IEEE 802.3x Full duplex flow control
- Internal 2 KB Transmit and 2 KB Receive data FIFOs
- Serial EEPROM port with auto-load of configuration data from EEPROM at power-on
- Flash/PROM interface for remote boot support
- Fully integrated IEEE 802.3/802.3u 3.3V CMOS physical layer
- IEEE 802.3 10BASE-T transceiver with integrated filters
- IEEE 802.3u 100BASE-TX transceiver
- Full Duplex support for 10 and 100 Mb/s data rates
- Single 25 MHz reference clock
- Low power 3.3V CMOS design
- IEEE 802.3u MII

Communications - CAN / LIN

MCP2510 CAN Developer's Kit

MICROCHIP

The MCP2510 is a combination of a software development and a CAN communications tool, introducing the CAN protocol.
The software development has been made easy with a variety of features to allow manipulation of functionality of the MCP2510. CAN messages can be created and saved for future use and modification. Received messages are displayed on a separate window. All MCP2510 registers may be read, displayed and modified.
The tool can be used to demonstrate basic communications on a CAN bus via message transmission and reception. Messages are created on host PC and sent or received, indicated by LED toggle showing the message traffic.
Easy demonstration of message transmission and reception is illustrated by way of push button switches on the target board for digital inputs, potentiometer for analogue inputs via CAN bus.
Supplied with a universal power supply. UK mains (**439-319**) and European (**210-699**) mains plug leads available separately.

MCP250XX CAN I/O Expanders Developer's Kit

MICROCHIP

The MCP250XX Development Kit is an evaluation, demonstration and development tool for Microchip Technology's 14-pin CAN I/O Expanders. The MCP250XX can be evaluated easily by installing the provided software and running the demonstration program. Furthermore, development can be accomplished by utilizing the bare CAN node with the prototyping area, as well as with the on-board device programmer.
The development board has the ability to program the user-defined defaults by using the device programmer module and the supplied software. Alternatively, the In-Circuit Serial Programming (ICSP™) protocol can be used to program the MCP250XX using the 5-pin header, which is connected to a 14-pin socket on the board.

Features:
- MCP250XX Development Board
- MCP250XX Development Kit CD-ROM with demo and programming software
- MCP250XX Development Kit User's Guide
- Three MCP25020 & Three MCP25050 CAN I/O Expanders

MCP2510 CAN Controllers

MICROCHIP

The MPC2510 is a full Controller Area Network (CAN) protocol controller implementing CAN specification V2.0 A/B. It supports CAN 1.2, CAN 2.0B Passive, and CAN 2.0B Active versions of the protocol, and is capable of transmitting and receiving standard and extended messages. It includes three transmit buffers and two receive buffers that reduce the amount of microcontroller work required.
The communication to the device is via an industry standard Serial Peripheral Interface (SPI) with data rates up to 5Mb/sec.

LATEST PRICING

Features:
- Implements Full CAN V2.0
- Programmable bit rate up to 1Mb/s
- Industrial temp. range -40°C to +85°C
- 0-8 Byte message length
- Low power 2.7V to 5.5V
- High speed SPI Interface 5MHz at 4.5V

Prices where indicated by a ↕ are subject to change. Please call your local sales office or visit www.farnell.com for the latest prices.

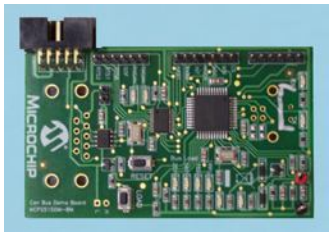
MCP2515 CAN Controller PICtail Demo Board



The MCP2515 PICtail™ Demo Board implements a simple CAN bus using two nodes. One node uses the MCP2515 Stand Alone CAN controller and the other node uses the MCP25020 CAN I/O Expander. Each node utilizes one input (push button) and one output (LED).
The board demonstrate a simple, inexpensive implementation of a CAN bus. The MCP2515 node transmits its input (push button) information at regular intervals and request input (push button) information from the MCP25020 at regular intervals. An LED on each node reflects the state of the other node's push button.

Features:
- Two CAN nodes consisting of:
- Node A: MCP2515, PIC16F676 and a MCP2551 CAN transceiver
- Node B: MCP25020 CAN I/O Expander and MCP2551 CAN transceiver
- Two headers on Node A, used for programming the PICmicro® MCU using the programming features of the PICkit™ 1 Flash Starter Kit or PICkit™ 2 Microcontroller Programmer. Neither header is populated

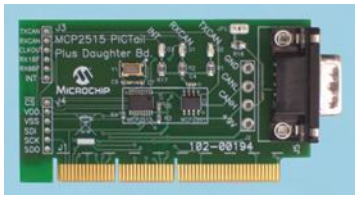
MCP2515 CAN Bus Monitor Demo Board

New



The MCP2515 CAN Bus Monitor Demo Board kit contains two identical boards which can be connected together to create a simple two node Controller Area Network (CAN) bus, which can be controlled and/or monitored via the included PC interface. The board(s) can also be connected to an existing CAN bus.Using the PC interface, users can configure the MCP2515 registers, send CAN messages, and receive CAN messages. CAN traffic can be generated using a button on the board not connected to the PC.There are also several headers (test points) so the MCP2515 pins can be monitored.

Features:
- Two identical boards and a CAN cable for creating a small CAN bus
- USB interface and PC software to interface to the CAN bus
- CAN bus PC software
- Button for changing the bus load on the Traffic Generator node
- Headers (test points) for monitoring the MCP2515 pins (CAN, SPI, and status/interrupt pins)
- PIC18F4550 PIC® Microcontroller (MCU) with ICD2 interface/header for in-circuit programming

MCP2515 PICtail Plus Daughter Board

New

The MCP2515 PICtail Plus Daughter Board is a simple Controller Area Network (CAN) board designed to be used with boards containing the PICtail Plus connector. The board also has the PICkit™ Serial connector for interfacing to the PICkit Serial Analyser tool. The CAN node consists of the MCP2515 Stand-Alone CAN controller and MCP2551 CAN transceiver. The PICkit Plus and PICkit Serial connectors allow the board to be interfaced to a variety of PICmicros so that the user can develop a CAN node. The board also contains headers or test points for most of the MCP2515 pins to allow the external functions to be monitored/evaluated.

Features:
- Stand-alone CAN controller and CAN transceiver
- PICtail Plus connector for attaching to Explorer 16 and other main boards with the connector
- DB9 connector for connecting to CAN networks using the psuedo standard pinout
- Footprint for terminal block connector for the CAN bus
- Test points for all of the MCP2515 pins

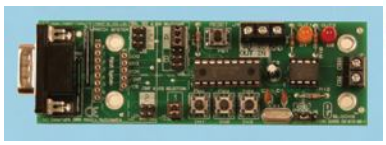
PICDEM CAN-LIN 3



The PICDEM™ CAN-LIN 3 Development Kit provides predefined templates for demonstration, evaluation and development using Microchip's family of 64 and 80-pin CAN microcontrollers. This tool is ideal for beginning CAN designers, as well as those new to the PIC18F6585/6680/8585/8680 family of enhanced CAN devices.
TThe Demonstration Board provides three nodes (two CAN and one LIN bus) that can be configured in numerous ways through jumpers and component selection. The CAN nodes implement basic input and output functionality and can send and receive CAN bus messages. The Host Software, included with the kit, allows fine manipulation of the CAN devices down to the bit level, as well as high-level control of the microcontroller.

Features:
- On-board digital and analog +5V regulator for directinput from 12V AC/DC wall adapter
- Two on-board CAN nodes and optional external CANbus connectors
- On-board LIN Bus master and slave node
- DB-9 RS-232 interface to IBM compatible PC
- Two optional ICSP ICD 2 connectors
- Optional header for LCD panel
- CAN Bus monitoring software for PC
- Devices preprogrammed with CAN Bus monitorfirmware
- Generous prototyping area

E-blocks CAN Board

New

This E-block is designed to allow a CAN bus communications system to be easily set up using a wide range of microcontroller devices - even those without embedded CAN functions. The board includes both a CAN Controller and a CAN Transceiver and uses the high speed SPI bus to configure the CAN controller for transmitting and receiving CAN information. The host microcontroller must therefore have an SPI bus module. The CAN transceiver converts the CAN controller signals into differential signal level used by the CAN bus, and vice versa. Flowcode macros for this E-block are available.

Features:
- Transmit and receive messages via CAN bus
- Allows processors with no CAN module access to the CAN bus
- Uses SPI bus for all configuration
- Access to dedicated input and output lines on the CAN controller
- 3 test switches and 2 test LEDs for development and training

ECAN/LIN PICtail Plus Daughter Board

New

The ECAN/LIN PICtail™ Plus Daughter Board is used with the Explorer 16 Development Board to facilitate rapid implementation and evaluation of applications that use Controller Area Network (CAN) and Local Interconnect Network (LIN) interfaces and are implemented on dsPIC33F Digital Signal Controllers and PIC24 16-bit microcontrollers.

Features:
- PICtail™ Plus interface
- 2x ECAN nodes with MCP2551 transceivers
- 2x LIN nodes with MCP2021-330 transceivers
- LIN Master or Slave selectable option
- External power supply input
- CD-ROM with example software and documentation

LIN Serial Analyser

MICROCHIP

New

The LIN Serial Analyser development system enables a personal computer (PC) to communicate with a LIN (Local Interface Network) bus as a network debug and analysis tool. It can reside on the bus as a master, slave, or non-intrusive snooper. The included PC program uses a graphical user interface to enter and display message frames occurring on the target bus. The user interface program runs on Microsoft Windows® compatible computers with a USB port. The Visual Basic Express source code for the PC interface GUI is open-source and available on the Microchip website. The LIN Serial Analyser connects to the system network using a 3-position terminal block.

Fault-Tolerant CAN/LIN Fail-Safe System Basis Chips

NXP

New

The UJA1061and the UJA1065 are fail-safe System Basis Chip (SBC) meaning basic discrete components which are usually present in ECUs are replaced with a Controller Area Network (CAN) and a Local Interconnect Network (LIN) interface, which are used as a local sub-bus. The fail-safe SBC supports all networking applications which control various power and sensor peripherals.
The UJA1061and the UJA1065 are designed to be used in combination with a microcontroller and a CAN controller, and are architectured for 14 V single power supply designs and for 14 V and 42 V dual power supply designs.

The UJA1061and the UJA1065 contain the following integrated devices:

- ISO11898-3 compliant fault-tolerant CAN transceiver, interoperable with TJA1054, TJA1054A and TJA1055 (UJA1061 only)
- High-speed CAN transceiver, inter-operable and downwards compatible with CAN transceiver TJA1041 and TJA1041A, and compatible with the ISO 11898-2 standard and the ISO 11898-5 standard (UJA1065 only)
- LIN transceiver compliant with LIN 2.0 and SAE J2602, and compatible with LIN 1.3
- Advanced independent watchdog
- Dedicated voltage regulators for microcontroller and CAN transceiver
- Serial peripheral interface (full duplex)
- Local wake-up input port
- Inhibit / limp home output port

MAX1305x CAN Transceivers

MAXIM

New

The MAX13050/MAX13052/MAX13053/MAX13054 are pin-for-pin compatible, industry-standard, high-speed, control area network (CAN) transceivers with extended ±80V fault protection. These products are ideal automotive and industrial network applications where overvoltage protection is required. These CAN transceivers provide a link between the CAN protocol controller and the physical wires of the bus lines in a CAN. These devices can be used for +12V/+42V battery, automotive, and DeviceNet® applications, requiring data rates up to 1Mbps.

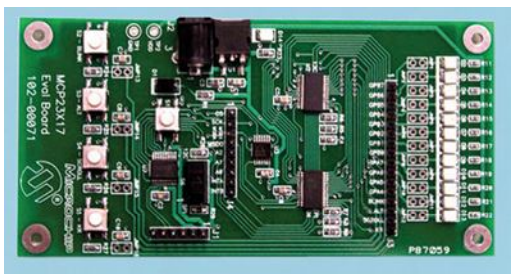
Communications - I/O

MCP23X08 8-Bit GPIO Expander Evaluation Board

Demonstrates simple input/output functionality of the MCP23008 (I^2C™ interface) and the MCP23S08 (SPI™ interface). The system demonstrates the simplicity of monitoring four inputs and applying the level to associated outputs.



Features:

- Demonstrates the MCP23X08 devices in a simple I/O application
- Includes two I/O expanders that are switch selectable: the MCP23008 with I^2C interface and the MCP23S08 with SPI interface
- ICSP header for the PIC10F202 allows users to customize firmware to further evaluate the MCP23X08
- Jumpers and headers allow the MCP23X08 to connect directly to custom applications for prototype work
- Can be powered from a 3.0V to 5.5V DC power source (connected to the +5V and GND test points)

MCP23X17 16-Bit GPIO Expander Evaluation Board

The MCP23X17 16-bit GPIO Expander Evaluation Board demonstrates simple input/output functionality of the MCP23017 (I^2C™ interface) and the MCP23S17 (SPI™ interface). The system demonstrates the simplicity of monitoring four pins configured as inputs and applying a predetermined pattern on LEDs connected to the remaining 12 pins configured as outputs.

Features:

- Demonstrates the MCP23X17 devices in a simple I/O application
- ICSP header for the PICmicro allows users to customize firmware to further evaluate the MCP23X17
- Jumpers and headers allow the MCP23X17 to connect directly to custom applications for prototype work
- Can be powered from a 3.0V to 5V DC power source (connected to the +5V and GND test points)

expandIO-USB™

Driver-Free USB I/O Expander for Software Controlled Peripherals

expandIO-USB is an ultra-low cost USB I/O expander. It allows a PIC microcontroller to be remotely controlled via USB, significantly reducing time-to-market for simple USB-based products.
It provides control of most microcontroller functions and is available for PIC18-F14K50, LF2450, LF2455, LF4450 and LF4455 microcontrollers.

Features:

- True HID plug and play - No drivers required
- Ultra-low cost, single chip solution
- Low speed version can use a low cost resonator, 200 commands per second
- Full speed version can process up to 32K commands per second
- Product/Manufacturer name, serial number, GUID & 122-byte EEPROM configurable over USB
- No Vendor ID / Product ID registration required
- USB 2.0 compatible
- USB / Self Power inputs
- Optional Configured, Suspended and All-Systems-Go, Tx / Rx indications
- DIL, SSOP, QFP packages

GPIO Expander Keypad and LCD Demo Board

MICROCHIP

New

The GPIO Expander Keypad and LCD Demo Board is designed to demonstrate the use of the MCP23S08/17 (SPI interface) and the MCP23008/17 (I2C interface) devices in a keypad and LCD example. The MCP23X17 (16-bit) devices interface to a 2x16 LCD module and the MCP23X08 (8-bit) devices interface to a 4x4 keyed matrix.

Features:

- Demonstrates the use of MCP23X08 and MCP23X17 devices for LCD and keypad applications
- Test points allow for easy monitoring of SPI and I2C buses, as well as the keypad and LCD interface to PIC
- ICSP header for the PIC® microcontroller allows users to customise firmware to further evaluate the MCP23X08/17 devices
- Can be powered from a 3 to 5V DC power source (connected to +5V and GND test points)

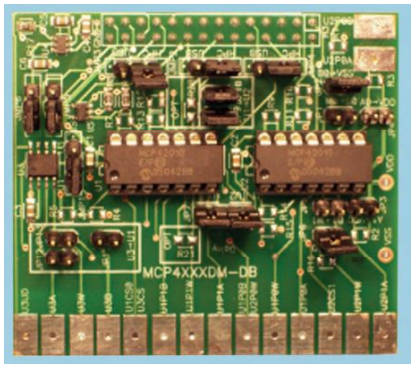
Digital Potentiometers

MCP402X Non-Volatile Digital Potentiometer Evaluation Board

MICROCHIP

Features:

- MCP4021/4022/4023/4024 support
- Small PCB (1.5"x1")
- One populated PCB: MCP4021-103E/SN configured as a "windowed" potentiometer, PIC10F206-I/OT with firmware
- Sample firmware to interface the PIC10F206 with push buttons & the MCP402X
- One un-populated PCB for rapid prototyping of an MCP402X application
- Sample kit with 1 PIC10F206-I/OT and 2ea of theMCP4021-I/SN (2.1kΩ, 5kΩ,10kΩ & 50kΩ)



The MCP402xEV is a low cost evaluation board that quickly enables the user to exercise all of the features of the MCP402X Non-Volatile Digital Potentiometer. This kit includes 2 PCBs, one populated & one unpopulated.The populated PCB supports the 8 pin SOIC, SOT-23-6 and SOT-23-5 MCP402X package variations. A 6 pin PIC10F206-I/OT with FLASH memory is utilized to generate all of the Low-Voltage (LV) and High-Voltage (HV) MCP402X serial commands when the 2 momentary switches are depressed in various sequences. This enables the user to Increment and Decrement the wiper, save the setting to EEPROM & exercise the WiperLock™ feature. The PCB also supports the standard ICSP programming header used by the Microchip BFMP low cost programming tool. The second PCB included in the kit is unpopulated to allow the user to build up the exact combination of components that their application would require.

MCP4XXX Digital Potentiometer Daughter Board

MICROCHIP

The MCP4XXX Digital Potentiometer Daughter Board allows the system designer to quickly evaluate the operation of Microchip Technology's MCP42XXX and MCP402X Digital Potentiometers. The MCP42XXX are dual Digital Potentiometer devices that have the same characteristics as their single Digital Potentiometer devices (MCP41XXX). The MCP402X devices are non-volatile devices that have similar characteristics as their volatile memory versions (MCP401X). The board supports two MCP42XXX devices to allow the Resistor Networks to be stacked" and form a programmable windowed Digital Potentiometer and an MCP402X device, which can be replaced with an MCP401X device. The board has one MCP42010 device (10 kΩ), which can be the rheostats at the ends, and one MCP42010 device (10 kΩ) which is the potentiometer in the middle and a separate standalone potentiometer.

The board also has a voltage doubler device (TC1240A), which can be used to show the WiperLock Technology feature of the MCP4021.

The MCP4XXX Digital Potentiometer Daughter Board has been made configurable, via jumpers. This allows you to determine the configuration that you wish to have the four digital potentiometer of the MCP42XXX devices.

Features:

- Header to interface to PICDEM boards using 28-pin header, including:- PICDEM HPC Explorer Demo Board
  - PICDEM FS USB Demo Board
  - PICDEM2 Plus Demo Board (Rev 5 or later)
  - PICDEM LCD
- TC1240A Voltage Doubler to generate VIHH voltage for WiperLock Technolgy evaluation
- Jumpers for configuration of U1-Pot0, U2-Pot0, and U2-Pot1 terminal connections
- Jumpers for MCP4021 Pot (A, W, and B) to replace U1-Pot0 in desired circuit
- Jumpers for routing signals (SI, SO, SCK, and CS) from either a PICDEM HPC Demo board or a PICDEM FS USB Demo Board
- Pads for easy connection to the Digital Potentiometer signals, including the Resistor Network Terminals and the Serial Interface signals

Digital Potentiometers

ANALOG DEVICES

A digital potentiometer adjusts and trims electronic circuits similar to variable resistors, rheostats and mechanical potentiometers. Sometimes called digital POT, RDAC, or digipot, these compact devices can be used to calibrate system tolerances or dynamically control system parameters. Nonvolatile memory parts provide wiper setting retention after a power OFF to ON cycle. In addition, fuse link parts offer a one time program trimmer feature.

- Single or dual supply operation
- -40°C to +125°C
- 128 or 256 resistor taps
- Single, dual or quad potentiometers on a single package device
- Low power shutdown
- I2C or serial interface
- 10kΩ, 50kΩ or 100kΩ total resistance

This is a family of ICs containing single, dual & quad digitally controlled potentiometer (DCP) with non-volatile memory on a monolithic CMOS integrated circuit. The digitally controlled potentiometer is implemented with a combination of resistor elements and CMOS switches. The position of the wiper is controlled by the user through the SPI serial or I2C interface . The potentiometer has an associated volatile Wiper Register (WR) and a non-volatile Initial Value Register (IVR) that can be directly written to and read by the user. The contents of the WR controls the position of the wiper. At power-up the device recalls the contents of the DCP's IVR to the WR. The DCP can be used as three-terminal potentiometer or as two-terminal variable resistor in a wide variety of applications including control, parameter adjustments, and signal processing.

Digitally Controlled Potentiometers

Intersil offers a wide selection of low-to-high resolution digitally controlled potentiometers in single- and multi-channel packaging. Available in both linear and non-linear tapers, these digital potentiometers replace mechanical potentiometers and trim resistors in applications where digital control allows microprocessor interfacing and extended functionality.
DCPs are typically used for voltage reference trimming, equipment calibration and tuning, feedback loop control, and signal level control.

Rejustor™ Micro-Resistor

microbridge

Rejustors are typically used in circuit resistance-trimming applications where high precision and/or temperature stability is required and the exact value of the desired resistance depends on variations in other circuit components - for example, batch-to-batch or unit-to-unit manufacturing variations, or where packaging-induced stresses cause significant changes in electrical output. The Rejustor's resistance can be adjusted typically to 0.1% precision in about a second, within a range of at-least 30% down from the initial value. The Rejustor is an analog adjustable resistor. These units can be adjusted dozens of times and always maintain the last adjusted state, even if they are placed in storage for extended periods. After adjustment, these passive devices require no power to hold their final value. Adjusting is performed by applying short duration analog voltage pulses to the auxiliary pin(s). Microbridge provides Rejust-it software to facilitate adjusting. Adjusting can be performed in the factory or in the field. Factory adjusting includes adjustment during final assembly, during ATE testing, or at probe for wafers and die.

Dual Digital Potentiometers

MAXIM

The DS1803 addressable dual digital potentiometer features two independently controlled 256-position potentiometers. Device control is achieved through a 2-wire serial interface. Three address pins allow up to 8 DS1803's to share the same 2-wire interface. The exact wiper position of each potentiometer can be written or read.
The DS1267 Dual Digital Potentiometer Chip consists of two digitally controlled, solid-state potentiometers. Each potentiometer is composed of 256 resistive sections. Between each resistive section and both ends of the potentiometer are tap points which are accessible to the wiper. The position of the wiper on the resistive array is set by an 8-bit value that controls which tap point is connected to the wiper output. Communication and control of the device are accomplished via a 3-wire serial port interface. This interface allows the device wiper position to be read or written.

Single/Dual Linear Digital Potentiometers

MICROCHIP

Microchip offers a range of devces that allow the customer to select a device that is a best fit for their application. The availability of both volatile and non-volatile devices allows the designer flexibility in optimising the application. Some applications may use the digital potentiometer as a replacement for a mechanical potentiometer.

RMS-Level Detector

THAT Corporation

- Logarithmic response to the RMS value of the input signal, convenient for audio applications requiring decibel-linear scaling
- Designed to convert an AC input current into a DC output voltage
- Integration time adjustable via an external R/C pair. With some external circuitry, response to DC also possible

Dynamic Range	≥80dB	Bandwidth	≥20kHz
Crest Factor	8 (1 dB error)	Gain-Bandwidth	20MHz

Filters, Active

2nd/4th/5th & 8th Order Filters

MAXIM

New

The MAX268 is a CMOS switched capacitor pin programmable Universal and Bandpass filter. There are 32 different centre frequencies range up to 140kHz.
The MAX274/75 are continuous time filters with 4/2 2nd order sections respectively. The filters can be configured for Butterworth, Bessel & Chebyshev filter response. The frquency range for the MAX274/75 are 150kHz/300kHz respectively.
The MAX280 is a 5th order lowpass instrumentation filter ranging from 0 to 20kHz. The filter can be cascaded for higher order rolloff i.e. 10th order.
The MAX7410 is a switched capacitor 5th order low pass Butterworth filter. The cut off freqency range is 1 to 15kHz and draws 1.2mA when in operation.
The MAX7420/21/23/24/25 are switched capacitor 5th order lowpass filter. The MAX7420/24 are Butterworth filters, MAX7421/25 are Elliptic filters & the MAX7423 is a Bessel filter. The cut off

RL Re-reeling available

Farnell

Filters, Active - continued

2nd/4th/5th & 8th Order Filters - continued

freqency range is 1 to 45kHz and draws 3mA when in operation.
The MAX281 is a 5th order lowpass instrumentation Bessel filter ranging from 0 to 20kHz.
The MAX7427 is a 5th order lowpass Elliptic filter ranging from 1 to 12kHz.
The MAX7403/07 are 8th order lowpass Elliptic filter ranging from 1 to 10kHz.

E-blocks Graphical LCD board EB043

matrix multimedia

This is a Graphical LCD display designed for E-blocks, which allows a large amount of data to be displayed to help reduce development time or to increase productivity in projects. The display features 132 by 132 pixels or 17424 individually addressable pixels. There is also a maximum of 65,536 individual colours available for each pixel and a white backlight to provide maximum display visibility even in the dark. Internal fonts allow up to 16 lines of text with 21 characters per line.

- 131 x 131 Pixels at a 1:1 ratio
- Up to 65,535 colours
- 3 or more programmable font sizes
- up to 16 lines of text, 21 characters per line
- E-Blocks compatible

LED & Laser Drivers

MCP1650 Multiple White LED Demo Board

MICROCHIP

The MCP1650 Multiple White LED Demo Board uses the MCP1650 IC to power the nine white LEDs which are connected in series. A PIC10F202 microcontroller in a SOT-23 6 pin package is used to provide the PWM signal to the MCP1650. It also accepts a push button input that allows the user to adjust the white LEDs to three different intensities of 100%, 50% and 25%.
The PIC10F202 microcontroller is programmable, allowing the user to modify or develop their own firmware routines to further evaluate the MCP1650 in this application.

Features:
- Programmed MCP1650 White LED intensity control via the PIC10F202
- Nine white LEDs connected in series
- PIC10F202 is used to generate the PWM signal which controls the intensity of the LEDs
- Push button selection for three levels of intensity control
- Includes three AA battery holder (batteries not included)

Multiple White LED Kit - MCP1650

MICROCHIP

New

The MCP1650 Multiple White LED Demo Board demonstrates the use of a conventional boost topology in a LED application. The board also serves as a platform to evaluate the MCP1650 boost controller.

This kit includes:
- MCP1650 Multiple White LED Demo Board
- MCP1650 Multiple White LED Demo Board User's Guide

LED Drivers

ON Semiconductor

New

The NCP5604/8 are multiple white LED drivers for display back light. It has a built-in DC/DC converter, based on a charge pump structure for improved battery efficiency. The NUD4001 is a high current 500mA O/P LED driver with continuous input voltage of 30V. The NUD4011 is a low current 70mA O/P LED driver with continuous input voltage of 200V. Typical applications are for automotive tail lights, industrial low voltage lighting and for portables battery back-up applications.

The STP16CPS05 is 16-bit shift register designed for LED panel displays. The serial-in, parallel-out register drivers 16 regulated constant current sources from 5mA to 100mA. The Auto Power Shut-Down and Auto Power-ON feature allows the device to save power without any external intervention. The LEDs' brightness can be controlled by using an external resistor to adjust the STP16CPS05 output current. The 30MHz high clock frequency makes the device suitable for high data rate transmission. The 3.3V voltage supply is useful in applications that interface with a 3.3V microcontroller.

LED Drivers/Charge Pump

ON Semiconductor

The NCP5603 is an integrated circuit dedicated to the medium power White LED applications.

NCP5603 Features:

- Wide Battery Supply Voltage Range: 2.7 - 5.5 V
- Automatic Operating Mode 1X, 1.5X and 2X Improves Efficiency
- Dimmable Output Current
- Up to 350 mA Output Pulsed Current
- Selectable Output Voltage
- High Efficiency Up To 90%
- Supports 2.5 kV ESD, Human Body Model
- Supports 200 V Machine Model ESD
- Low 40mA Short Circuit Current

The NCP5008 is a high efficiency boost converter operating in current loop control mode to drive a LED. The current mode regulation allows a uniform brightness of the LEDs.

NCP5008 Features:

- 2.7 to 6.0 V Input Voltage Range
- Output Voltage from Vbat to 15 V
- 3.0 µA Quiescent Supply Current
- Automatically LEDs Current Matching
- No External Sense Resistor
- Includes Dimming Function
- Programmable or Automatic Current Output Mode
- LOCAL or REMOTE Control Facility
- Photo Transistor Sense Feedback Input
- Inductor Based Converter brings High Efficiency
- Low Noise DC/DC Converter

The NCP5010 is a fixed frequency PWM boost converter with integrated rectification optimized for constant current applications such as driving white LEDs.

NCP5010 Features:

- 2.7 to 5.5 V Input Voltage Range
- Efficiency: 84% for 5 LED (VF = 3.5 V by LED) at 30 mA and
- 2 V V_{IN}
- Low Noise 1 MHz PWM DC-DC Converter
- Open LED Protection and Short Circuit Protection
- Serial LEDs Architecture for Uniform Current Matching

High Efficient 6 LED Drivers

MAXIM

MAX8901 Parallel LED Driver MAX8647/MAX8648 Serial LED Driver

8 pins TDFN

16 pins TQFN

The MAX8901A/B drive two to six series-connected white LEDs with constant current to provide uniform light intensity for LCD back lighting in cell phones, PDAs, and other handheld devices.
The MAX8647/MAX8648 drive up to six white LEDs or two sets of RGB LEDs in parallel with regulated constant current for display backlight. Each LED has a independent voltage supply and an adaptive current regulator.

- Input voltage range 2.6V to 5.5V
- Fixed-frequency operation MA8901 750 kHz & MAX647/8 1MHz
- Capable of driving up to 6 white LEDs
- Shutdown current MA8901& MAX647/8 are 0.01µA & 1µA
- Internal Soft-Start and Thermal Shutdown
- Dimming Current Range 0.1mA to 24mA

Six & Eight White/RGB LED Driver

MAXIM

- The MAX8901A/B are a step-up converters drive from two to six series-connected white LEDs (WLEDs) with constant current to provide uniform WLED intensity for LCD backlighting in cell phones, PDAs, and other handheld devices. The MAX8901operates at a fixed 750kHz (typ) switching frequency, allowing for tiny external components, and are optimized for the highest possible efficiency over the full 1-cell Li+/Li-Poly battery range. These converters use a single input (ON) to enable the IC and to control WLED intensity. The MAX8901A requires a direct PWM input to regulate WLED intensity with the WLED current proportional to the PWM duty cycle. The MAX8901B uses single-wire, serial-pulse dimming that reduces the WLED intensity in 32 linear steps.
- The MAX8647/8 can drive up to six white LEDs or two sets of RGB LEDs with regulated constant current for display backlight and fun light applications. By utilizing an inverting charge pump and extremely low-dropout adaptive current regulators, these ICs achieve very high efficiency over the full 1-cell Li+ battery voltage range and even with large LED forward voltage mismatch. The 1MHz fixed-frequency switching allows for tiny external components. The regulation scheme is optimized to ensure low EMI and low input ripple. The MAX8647/MAX8648 include thermal shutdown, open- and short-circuit protection.The MAX8647 features an I²C serial port, while the MAX8648 features a three-wire serial-pulse logic interface. Both devices support independent on/off and dimming for main and subbacklights. The dimming ranges are pseudo-logarithmic from 24mA to 0.1mA and off in 32 steps. Both devices include a temperature derating function to safely allow bright 24mA full-scale output current setting while automatically reducing current to protect LEDs at high ambient temperatures above +60°C.
- The MAX8645X/Y charge pumps drive up to eight white LEDs with regulated constant current for uniform intensity. The main group of LEDs (M1-M6) can be driven up to 30mA per LED for backlighting. The flash group of LEDs (F1 and F2) is independently controlled and can be driven up to 200mA per LED (or 400mA total). Two 200mA LDOs are on-board to provide power for camera functions. The LDOs' output voltages are pin programmable to meet different camera-module requirements. The MAX8645X/Y differ only in LDO output voltages. By utilizing adaptive 1x/1.5x/2x charge-pump modes and very-low-dropout current regulators, the MAX8645X/Y achieve high efficiency over the full 1-cell lithium-battery voltage range. The 1MHz fixed-frequency switching allows for tiny external components, and the regulation scheme is optimized to ensure low EMI and low input ripple.

ESD Protection RS-422/485 Triple/Quad Receivers

MAXIM

MAX3094
- 4 Receivers & 128 Rx/Tx on bus
- Single +3V Operation (MAX3094E)
- 10Mbps Data Rate
- 1nA Low-Power Shutdown Mode
- 2.4mA Operating Supply Current

MAX3095/6
- 4 Receivers & 128 Rx/Tx on bus
- Single +3V Operation (MAX3096)
- Single +5V Operation (MAX3095)
- 10Mbps Data Rate
- 1nA Low-Power Shutdown Mode

MAX3097
- 3 Receivers & 240 Rx/Tx on bus
- Supply Voltage +3V to +5.5V
- Supply Voltage -10V to +13.2V Extended Common-Mode Range
- Capacitor-Programmable Delay of Fault Indication
- Allows Error-Free Operation at Slow Data Rates
- Independent and Universal Fault Outputs
- 32Mbps Data Rate

ESD Protection:
- ±15kV-IEC 1000-4-2, Air-Gap Discharge
- ±8kV-IEC 1000-4-2, Contact Discharge
- ±15kV-Human Body Model

These devices are rugged, low-power, triple/quad, RS-422/RS-485 receivers featuring electrostatic discharge (ESD) protection for use in harsh environments.

Line Drivers and Receivers - continued

Bus Drivers, Receivers & Transceivers

A range of RS232/422/485 Drivers, Receivers and Transceivers from Sipex. The ICs come with improved ESD specifications and are rated for between 3.0 and 5.5V supply voltage. A wide range of options are available including Low Power and High Speed, as well as Half and Full Duplex versions.

AS-Interface ICs

ZMD

AS-Interface (Actuator Sensor Interface) is a bus system for low level field applications in industrial automation. The primary application is communication with small binary sensors and actuators using the ASI standard. The AS-Interface modernizes automation systems effectively, saving installation costs and time. The easy "plug and play" capabilities of AS-Interface products will minimize maintenance costs.
A significant feature of AS-Interface is the Yellow Cable." The 2 wires in the ASI cable transmit power and data to all points in the network. To transform the binary data in the physical layer of the AS-Interface, highly integrated circuits are required. These innovative ICs from the ZMD AG fulfill all requirements of the ASI 2.11 standard, defined by the AS-Interface Association, and will give you quick access to the world of AS-Interface.
The AS-Interface is an open standard based on IEC 62026-2 and EN 50295.

- Multifunctional interface ICs for slave, master and repeater/monitor applications
- Fully certified according to specification AS-Interface V2.11 and V3.0
- Bus interface optimization option for high current applications
- Flexible I/Os, flexible bus interface, on-chip EEPROM
- Additional addressing channel through infra-red port
- Very small SSOP packages

Programmer

The ZMD AS-Interface Programmer provides support for newcomers and experienced users in handling ZMDs AS-Interface ICs. A self-explanatory graphical user interface allows to control AS-Interface functionality like EEPROM programming, telegram by telegram debugging - including IC configuration - of an AS-Interface network, and setting and reading of digital parameter and IO ports. Furthermore a real AS-Interface network can be controlled digitally with a graphical interface (not AS-Interface real-time mode!).
The Programmer hardware includes a simple data decoupling network for laboratory setups, witch makes a special AS-Interface power supply unnecessary. Only a additional power source of 30VDC is required.
ZMDs AS-Interface Programmer features at a glance:

- AS-Interface IC and network evaluation kit
- Static AS-Interface network evaluation and configuration
- Ideal for AS-Interface module setup and test by the included software and the open serial protocol
- Included Software tools:
- Graphical user interface for IC and network setup
- Software application for a TCL* interface

Triple Digital Isolators

New

The ISO7230 and ISO7231 are triple-channel digital isolators each with multiple channel configurations and output enable functions. These devices have logic input and output buffers separated by TI's silicon dioxide (SiO2) isolation barrier. Used in conjunction with isolated power supplies, these devices block high voltage, isolate grounds, and prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. The ISO7230 triple-channel device has all three channels in the same direction while the ISO7231 has two channels in one direction and one channel in opposition. These devices have an active-high output enable that when driven to a low level, places the output in a high-impedance state and turns off internal bias circuitry to conserve power.These devices require two supply voltages of 3.3V, 5.0V, or any combination. All inputs are 5V tolerant when supplied from a 3.3V supply and all outputs are 4-mA CMOS.

Digital Magnetic Isolators

NVE's family of high-speed digital isolators are CMOS devices created by Integrating active circuitry and the GMR-based and patented IsoLoop® technology.
The symmetric magnetic coupling barrier provides a typical propagation delay of only 10 ns and a pulse width distortion of 2 ns achieving an excellent specification for an isolator device. Typical transient immunity is 30 kV/μs. These are ideally suited for isolating applications such as PROFIBUS, RS-485, RS422 and other multiple Data Point Transmission applications.

Digital Isolators

iCoupler® isolators from Analog Devices eliminate optocoupler limitations. Combining high-speed CMOS with chip-scale micro transformers, this family of isolation products provides substantial improvements in terms of size, performance, power, reliability and ease-of-use. iCoupler products are offered in a wide range of performance, channel configuration, and price levels to fit almost any application.

Digital Isolators

Silicon Laboratories

Silicon Lab's family of digital isolators are CMOS devices that employ an RF coupler to transmit digital information across an isolation barrier. Very high speed operation at low power levels is achieved. These parts are available in a 16-pin wide body SOIC package. Three speed grade options (1, 10, 150 Mbps) are available and achieve typical propagation delay of less than 10 ns.

Motion Control ICs

Motion Control ICs

AVAGO TECHNOLOGIES

The HCTL1100 is a high performance, general purpose motion control IC which frees the host processor for other tasks by performing all the time-intensive functions of digital motion control. The programmability of all control parameters provides maximum flexibility and quick design of control systems with a minimum number of components.

The HCTL2000 quadrature decoder/counter IC family provides a one-chip, easy to implement solution to interfacing the quadrature output of an encoder or digital potentiometer to a microprocessor system.

IRADK31 Reference Design Kit

International IOR Rectifier

The IRADK31 reference design kit is an electronic controller for driving a 1/3HP 3-phase motor from either a single phase 120VAC OR 230VAC.The circuit provides all the necessary functions, including software driven High performance Micro Controller, for starting and operating the motor. It also includes an AC on/off switch, EMI filter and the rectification stage with a buck-converter system that provides the auxiliary +15V and +5V supply. This controller is software driven through a Graphical User Interface (GUI) that enables the user to control the entire electrical system and motor parameters. In addition, it allows the user to monitor the DC bus current, motor speed, and detects fault conditions.

Features:
- Fused 120/230VAC input
- AC input on/off switch and EMI filter
- NTC inrush current limiter
- 3-Phase, variable voltage output
- Opto-isolated RS-232 serial link interface to the Graphic User Interface software
- Integrated auxiliary power supply of +15V and +5V
- Fault protection for over current condition
- Stand-alone Mode and fully software driven (PC Mode) using Graphical User Interface
- PIC18F2431 motor control MCU from Microchip Technology Inc. with Power PWM module and Hi-speed 10-bit A/D converter
- RJ11 connector to MPLAB ICD2 that provides programming or I-Circuit debugger interface

TMC246/249 Stepper Motor Driver

TRINAMIC

The TMC246/249 are smart power microstepping drivers for bipolar stepper motors. The integrated unique sensorless stall detection StallGuar™ makes them a good choice for applications where a reference point is needed, but where a switch cannot be used. They provide an SPI™ interface as well as the classical analog/digital control.

TMC246

The TMC246 integrates low-RDS-ON TrenchFET® power MOSFETs to give an extremely high efficiency and allow driving of a motor current of up to 1.5A per phase without cooling measures. The small package and high efficiency make the device a suitable for embedded motion control and even for battery powered designs.

TMC249

The TMC246-EVAL and TMC249-EVAL provide a platform to evaluate all the features and capabilities of the TMC246/249 stepper motor drivers. External control elements provide a wide range of selectable driver parameters, e.g. slope control or coil current. Also, the StallGuard features can be explored, as the load value is indicated by LEDs and their are buttons which can be used to set up a stall threshold. There is also a PC software that supports all these features.

Trinamic Motion Control Modules (TMCM)

TRINAMIC

Trinamic Motion Control Modules (TMCM) are embedded stepper motor control subsystems, targeted towards OEM applications such as lab automation, office automation, embedded industrial control and automated optics with production volumes up to a few 1000 units per year. The modules combine Trinamic's dedicated position control and driver chip sets with Atmel's ATmega32 (32kByte Flash + 2kByte SRAM) microcontroller.A powerful, yet easy-to-use programming environment makes stepper control as simple as a few mouse clicks, significantly reducing project design time.

- Easy-to-use high level TMCL programming language
- Controls up to three bipolar stepper motors
- Microstepping
- Serial UART interface
- Smart programmable current control, ramps, velocity
- Limit and reference switch connection points
- Stand alone or host controlled operation
- In system programmable microcontroller
- 16kByte instruction memory for control programming
- On-board diagnostics

In order to facilitate the design-in process Trinamic also produces a comprehensive evaluation kit. The kit comes with a TMCM-baseboard, programming and evaluation software for Windows OS (9X, XP, NT4.0, 2000), documentation, a RS232 cable and stepper motors. Simply plug the TMCM onto the baseboard and connect external cables such as power supply and motor wiring using the onboard screw terminals then Link up to a PC via the RS232 port and use the terminal software to instantly communicate with the TMCM.

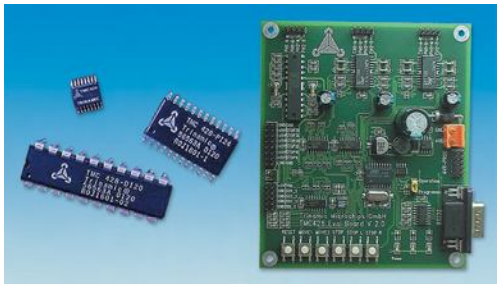
Motor Drivers and Triac Control Circuits - continued

TMC211/TMC222 Stepper Motor Controller/Driver

The TMC211 and TMC222 are combined micro-stepping stepper motor motion controller and driver ICs with RAM and OTP memory. The RAM or OTP memory is used to store motor parameters and configuration settings. The devices allow up to four bit of microstepping and a coil current of up to 800 mA.
Communications with the TMC211 controller take place via a LIN interface and communications with the TMC222 controller take place via an I²C interface.



Evaluation Boards
The TMC222-EVAL KIT provides a platform to evaluate all the features and capabilities of the TMC222 stepper motor controller and driver IC. The kit allows the TMC222 chip to the easily be connected a power supply, a motor and an I²C master. Using USB-2-X interface converter (included in the kit), the demonstration board connects to a PC running Windows 98/2000/XP via the USB port. The TechLibCD Evaluation software is also included.

TMC428 Stepper Motor Controller

IC for controlling up to three stepper motors

The TMC428 is a miniaturized high performance stepper motor controller for up to three motors. It integrates all real time critical tasks in reliable, dedicated hardware: An integrated motion ramp profile generator as well as an adaptable microstep sequencer with microstep RAM table. Advanced stop- and reference switch handling allows for precise and fast referencing as well as on-the-fly position checking. Automatic motor current control gives high motor dynamics while saving energy.The TMC428 connects to the TRINAMICs SPI™ drivers (TMC236,TMC239,TMC246 and TMC249) or to Step-/direction drivers. A second SPI™ interface allows communication with a host microcontroller. The host microcontroller just needs to do high-level control tasks, e.g. giving the command: Drive motor 2 to position 1000. The TMC428 then automatically calculates the motion ramp based on velocity and acceleration parameters.

Evaluation Board
The TMC428-EVAL allows the exploration of the TMC428s functions and aids the development of applications. It is equipped with the TMC246 and TMC249 motor drivers for high performance motor control. The is supplied with PC software.

TMC236 Stepper Motor Controller

The TMC236 is a smart power microstepping driver for bipolar stepper motors. It provides an SPI™ interface as well analog/digital control. The integrated low-RDS-ON TrenchFET® power MOSFETs give an extremely high efficiency and allow driving of a high motor current of up to 1.5A per phase without cooling measures even at high environment temperatures. The small footprint and high efficiency make the device a perfect solution for embedded motion control, even for battery powered designs.

Evaluation Board
The TMC236-EVAL provides a platform to evaluate all the features and capabilities of the TMC236 stepper motor driver. External control elements provide a wide range of selectable driver parameters, e.g. slope control or coil current. The board offers measurement points to observe the most important signals.

TMC 239 Stepper Motor Controller

The TMC239 is a smart high current microstepping driver for bipolar stepper motors. It provides an SPI™ interface as well as analog / digital control. It directly drives external MOSFETs for currents up to 4A. This way it reaches an extremely high efficiency and allows driving of a high motor current without cooling measures even at high environment temperatures.The high motor current makes this device ideal for miniaturized highly dynamic and high torque drive systems.

4A Dual High-Speed Power MOSFET Drivers

MICROCHIP

New

Independent enable function for each driver outputLow shoot-through/cross conduction current in output stageSupply operating range 4.5V to 18VHigh Capacitive Load Drive Capability typically , 2200 pF in 15 ns, 5600 pF in 26 nsShort delay times typical 50 nsLatch-up protected: Will Withstand 1.5A Reverse CurrentLogic Input Will Withstand Negative Swing Up To 5V

The MCP14E3/MCP14E4/MCP14E5 devices are afamily of 4.0A buffers/MOSFET drivers. Dual-inverting,dual-noninvertering, and complementary outputs arestandard logic options offered.The MCP14E3/MCP14E4/MCP14E5 drivers arecapable of operating from a 4.5V to 18V single powersupply and can easily charge and discharge 2200 pFgate capacitance in under 15 ns (typical). They providelow impedance in both the ON and OFF states toensure the MOSFET's intended state will not beaffected, even by large transients. The MCP14E3/MCP14E4/MCP14E5 inputs may be driven directlyfrom either TTL or CMOS (2.4V to 18V).Additional control of the MCP14E3/MCP14E4/MCP14E5 outputs is allowed by the use of separateenable functions. The ENB_A and ENB_B pins areactive high and are internally pulled up to VDD. The pinsmaybe left floating for standard operation.The MCP14E3/MCP14E4/MCP14E5 dual-output 4.0Adriver family is offered in both surface-mount and pinthrough-hole packages with a -40°C to +125°Ctemperature rating. The low thermal resistance of thethermally enhanced DFN package allows for greaterpower dissipation capability for driving heaviercapacitive or resistive loads.These devices are highly latch-up resistant under anyconditions within their power and voltage ratings. Theyare not subject to damage when up to 5V of noisespiking (of either polarity) occurs on the ground pin.They can accept, without damage or logic upset, up to1.5A of reverse current being forced back into theiroutputs. All terminals are fully protect againstElectrostatic Discharge (ESD) up to 4 kV.

Photovoltaic Isolators

International IOR Rectifier

A photovoltaic isolator generates an electrically isolated DC voltage upon receipt of a DC input signal.
It can serve as an isolator, a coupler and as an isolated voltage source. It is ideal for driving Power MOSFETs and IGBTs or sensitive gate SCRs to form solid-state relays.
As a coupler, it can sense a low-leve IDC signal and transmit a voltage signal to an electrically remote circuit.
As a voltage source, it can function as a DC transformer.

MOSFET/IGBT Drivers

ON Semiconductor

New

304/5111 are dual/single inputs and dual outputs direct drive 2 N-channel power MOSFET or IGBT drivers, when arranged in a half-bridge configuration. The outputs are in phase ooth channels are have matched propagation delays. The NCP5106/5111/5304 outputs can source and sink current 250mA and 500 mA respectively. The NCP5181 output can rrent 1.1A and 2.4A respectively.

MOSFET Drivers

ZETEX SEMICONDUCTORS

New

Applications
Power MOSFET and IGBT Gate Driving in
- Synchronous switch-mode power supplies
- Secondary side synchronous rectification
- Plasma Display Panel power modules
- 1, 2 and 3-phase motor control circuits
- Audio switching amplifier power output stages

The ZXGD3001/2/3/4 are high-speed non-inverting single MOSFET gate drivers capable of driving into a MOSFET or IGBT gate capacitive load from supply voltages 12V to 40V. With typical propagation delay times down to 1ns to 3ns and rise/fall times down to 9ns to 14ns these devices ensures rapid switching of thepower MOSFET or IGBT to minimize power losses and distortion in high current fast switching applications.

MOSFET/IGBT Power Drivers

International IOR Rectifier

The motor drive control ICs are high voltage, high speed power MOSFET and IGBT drivers with independent high and low side reference output channels.
- Logic input compatible with standard CMOS or LSTTL output
- Floating channel designed for bootstrap operation
- Tolerant to negative transient voltage
- Gate drive supply range from 10V to 20V
- 5V Schmitt-triggered input logic

Universal Input Linear Flourescent Ballasts

International IOR Rectifier

IRPLLNR5

IRPLLNR7

Features:
- suitable for 54W TL5 lamp (IRPLLNR5) or 35W TL5 (IRPLLNR7)
- high power factor/low THD
- high frequency operation
- lamp filament preheating
- lamp fault protection with auto-restart
- low AC line protection
- end of lamp life shutdown
- uses IRS2168D (IRPLLNR5) or IRS2166D (IRPLLNR7) HVIC ballast controller

Contents:
- assembled and tested demo board
- user guide
- schematic
- bill of materials
- circuit board layout
- datasheet
- lighting solutions CD

IRPLLED1

International IOR Rectifier

Features:
- time delayed hysteric regulation
- continuous load current control
- high frequency operation
- synchronus rectification
- PWM dimmable
- auto restart, non-latched shutdown
- uses IRS2540PBF HVIC LED buck controller

Contents:
- assembled and tested demo board

Power IC Relays

Power IC Relays

International IOR Rectifier

The Photovoltaic AC Relay (PVA) is a single-pole solid state replacement for electromechanical relay for switching DC and/or AC loads.
This range of relays consists of inverse series connected MOSFETs to provide distortion-free control for bi-directional and DC signals.
With power MOSFET output, the relays can control analogue signals from millivolts to hundreds of volts, from nanoamps to hundreds of milliamps, from DC to hundreds of KHz.
All advantages of a solid-state technology are met with switching life greater than 10^{10} operations, actuation times of less than 100µs, minimal false thermal voltage generation, low control power requirements.
The range eliminates the need for a coil suppression diode, eliminates bounce, is EMI free and shock/vibration resistant.

E-blocks Relay board EB038

matrix multimedia

475504

This relay board contains 4 relays (choose high nibble or low nibble) which are each rated at 250V and 6A. This is ideal for a wide variety of applications including for use as the output stage of a Programable Logic Controller based on E-blocks technology. Note that whilst the relays are rated at mains power we can not recommend this board is used at mains rated voltages as it is supplied without a protective casing. This board is compatible with upstream boards operating off 3.3V.

- Provides 4 relay outputs
- E-blocks compatible

2A & 3A Dual Buck Converter

TEXAS INSTRUMENTS

New

- Output current TPS54283/6 2A & TPS54383/6 3A
- Input Voltage 4.5V to 28V
- Output Voltage 0.8 V to 90% of Input Voltage
- Operating Temperature -40°C to 125°C
- Pins/Package 14pin/HTSSOP

The TPS54xxx devices are dual output non-synchronous buck converters. With internally-determined operating frequency, soft start time, and control loop compensation, these converters provide many features with a minimum of external components. Channel 1 overcurrent protection is set at 3 A for the TPS54283/6 & 4.5A for the TPS54383/6, while Channel 2 overcurrent protection level is selected by connecting a pin to ground, to BP, or left floating. The setting levels are used to allow for scaling of external components for applications not needing the full load capability of both outputs. The outputs may be enabled independently, or may be configured to allow either ratiometric or sequential startup sequencing. Additionally, the two outputs may also be powered from different sources.

PWM Controllers

ON Semiconductor

New

ɜ are a high performance resonant mode controller for PSU, the NCP1396 having in addition high and low side drivers.
ɜ a 600 kHz PWM/PFM step-down DC-DC controller having typical 92% efficiency, suitable for battery operated hand-held electronic products.
ɜ a high performance active clamp/reset PWM controller, having two in phase outputs, with an overlap delay to prevent simultaneous conduction and facilitates soft switching. Programmable maximum volt-second product to prevents transformer saturation, and programmable soft-start to reduces stress during power up.

- The NCP1606 is an active power factor controller specifically designed for use as a pre-converter in electronic ballasts, ac/dc adapters and other medium power off line converters typically up to 300W.
- The NCP348 is a +28V overvoltage protection controller, which disconnects the output from the input, due to the integrated 80mΩ Ron Power NMOS transistor.
- The NCP4302 is a controller and driver that provides all the control and protection functions necessary for implementing a synchronous rectifier operation in a flyback converter.
- The NCP4330 is a dual N-channel MOSFET driver intended to be used as a companion chip in AC/DC or DC/DC multi-output post regulated power supplies.

LM26480 Dual Step Down DC/DC Converter & Dual Voltage Regulator

National Semiconductor

The LM26480 is a multi-functional Power Management Unit optimized for low-power digital applications. This device integrates two highly efficient 1.5A step-down DC/DC converters and also two 300mA voltage linear regulators.

Step-Down DC/DC Converters:
- 1.5A output current
- Vout1 : 0.8V-2.0V @ 1.5A
- Vout2 : 1.0V-3.3V @ 1.5A
- Up to 96% efficiency
- ±3% FB voltage accuracy
- 2 MHz PWM switching frequency
- PWM - PFM automatic mode change under low loads
- Automatic soft start

Linear Regulators:
- Vout 3 & 4 of : 1.0V-3.5V
- 3±% FB voltage accuracy
- 300 mA output current
- 25 mV typical dropout

LM3407 Constant Current 350mA LED Driver

National Semiconductor

New

- Input operating range 4.5V to 30V
- Output voltage range: 0.1Vin to 0.9Vin
- Accurate constant current output 350mA
- Cycle-by-Cycle current limit
- Independent device enable (CMOS compatible) and PWM dimming control
- Converter switching frequency adjustable from 300 kHz to 1 MHz
- No external control loop compensation required
- Supports ceramic and low ESR output capacitors
- Input Under Voltage Lock Out (UVLO)
- Thermal shutdown protection

Li-Ion Power Management System

Texas Instruments

New

The TPS65024x are single powered Li-Ion or Li-Polymer cell power management ICs. The TPS65024x provide three highly efficient, step-down voltage converters. Also two general purpose 200mA and one 30mA LDO voltage regulators supplied from one of the step-down converters or directly from the battery.

- Pin/package 32/QFN
- Opearting temp. -40°C to 85°C
- 30mA LDO3 for Vdd_alive
- 200mA LDO1 and LDO2
- 3 DC/DC outputs
- Input voltage 2.5V to 6.0V
- 85µA quiescent current
- 2.25MHz switching frequency

Power Management & Battery Chargers

Texas Instruments

New

These ICs are complete power management solutions for portable applications, from battery management to power conversion and distribution. The devices have low external component counts and small Lead(Pb)-Free packaging to provide the smallest power management solutions. High efficiency and low power consumption also help extend battery run time. Typical applications include PDA, digital cameras & mobile phones.

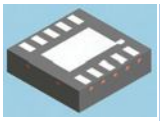
Battery Charger with Selectable AC Adapter or USB Port Supply

MICROCHIP

New

- High accuracy preset voltage regulation ±0.5%
- Constant current/voltage operation with thermal regulation
- Battery cell temperature monitor
- Operating temperature -40°C to 85°C
- Pin/Package 10/DFN
- MCP73837 good monitor
- MCP73838 timer enable
- Application includes, PDA, PMP, digital cameras, MP3 players & battery chargers



The MCP73837/8 are fully integrated linear Li-Ion / Li-Polymer battery chargers with autonomous power source selection, USB-Port or AC-Adapter as the power source. The USB-port has two preset maximum charge current rates of 100mA or 500 mA. With an AC-Adapter an external resistor sets the magnitude of the system or charge current ranging from 15mA to 1A.

DC-DC Converters LM3678/91 & LM5118 Series

National Semiconductor

10 Pin LLP

6 Pin MICRO Bump

20 Pin TSSOP-EXP

New

The LM3678 is an adjustable 1.5A step down converter for handheld Li-Ion battery application, in shutdown mode current consumption is 0.01µA. Output voltage accuracy is ±3% and only three external components are required.
The LM3691 are a miniature 1A step down DC-DC converters with fixed precise output voltage ±1%. Typical quiescent current is 64µA, and therfore suitable for handheld battery applications.
The LM5118 is a wide input/output DC-DC converter, with an adjustable PWM controller. Features inculde, thermal shutdown, programmable soft-start time, integrated high & low side gate drives and emulated peak current mode control.

LT3507 Triple Output & LTC3523 Dual Step Up/Down DC-DC Converters

LINEAR TECHNOLOGY

38 Pin QFN

16 Pin DFN

New

LT3507
- Input voltage 4V to 36V
- One 2.4A & two 1.5A output switching regulators
- Low dropout linear regulator with external transistor
- Antiphase switching which reduces ripple
- Independent run, tracking/soft-start & power good indicators
- Adjustable 250kHz to 2.5MHz switching frequency

LTC3523
- Step-up 1.8V to 5.25V@ 600mA
- Step-Down 0.615V to 5.5V @400mA
- Up to 94% effi ciency
- Pin selectable burst mode operation
- 45µA quiescent current in burst mode operation
- Switching frequency 1.2MHz/ 2.4MHz for LTC3523/LTC3523-2

Fixed Frequency PWM Controllers

The **SP6133** is a high voltage synchronous step-down switching regulator controller, single supply step down converter. It is designed to drive a pair of external NFETs. Protection features include UVLO, thermal shutdown, output short circuit protection, and overcurrent protection with auto restart. The device also features a PWRGD output and an enable input.
The **SP6134H** is a high voltage, synchronous step-down switching regulator controller optimized for high efficiency. The device is designed to be especially attractive for dual supply, 12V step down with 5V used to power the controller. This lower supply voltage minimizes power dissipation in the part. The SP6134H is designed to drive a pair of external NFETs. Protection features include UVLO, thermal shutdown and output short circuit protection.
The **SP6652** is a high efficiency, synchronous buck regulator ideal for portable applications using one Li-Ion cell. A logic level shutdown control, external clock synchronization, and forced-PWM or automatic control inputs are provided. Other features include soft-start, over current protection and 140C over-temperature shutdown.

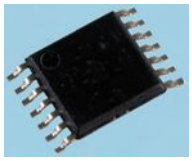
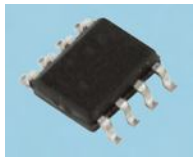
High-Performance Single-Phase PWM Notebook Controller

6269 Series

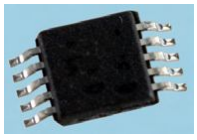




- Fast transient response
- Wide input voltage range: +7.0V to +25.0V
- Output voltage range: +0.6V to +3.3V
- Wide output load range: 0A to 25A
- Selectable diode emulation mode for increased light load efficiency
- Programmable PWM frequency: 200kHz to 600kHz
- Pre-biased output start-up capability
- Internal 5V LDO for self-biasing
- Integrated MOSFET drivers and bootstrap diode
- Internal digital soft-start
- Power good monitor
- PWM minimum frequency above audible spectrum
- Fault protection
- Undervoltage protection
- Soft crowbar overvoltage protection
- Low-side MOSFET rDS(ON) overcurrent protection
- Over-temperature protection
- Fault identification by PGOOD pull down resistance

The 6269 family range of ICs are a Single-Phase Synchronous-Buck PWM controllers featuring Intersil's Robust Ripple Regulator (R3) technology that delivers truly superior dynamic response to input voltage and output load transients. Integrated MOSFET drivers, 5V LDO and bootstrap diode result in fewer components and smaller implementation area..
ISL6269 High-Performance Notebook PWM Controller with Bias Regulator and Audio-Frequency Clamp.
ISL6269A High-Performance Notebook PWM Controller.
ISL6269B High-Performance Notebook PWM Controller with Audio-Frequency Clamp.

810xs Series



- Wide input voltage range ISL8104 +8.0V to +14.0V
- Wide input voltage range ISL8105 +1.0V to +12.0V
- Wide input voltage range ISL8106 +7.0V to +25.0V
- Fast transient response
- +0.6V internal reference
- Integrated MOSFET drivers with shoot-through protection
- External type-two loop compensation
- PWM minimum frequency above audible spectrum
- Internal digital soft-start with prebiased startup capability

The **ISL8104** is a Buck Pulse-Width Modulation (PWM) Controller with overcurrent protection.The operating frequency is adjustable from 50kHz to 1.5MHz. The amplifier features a 15MHz (typ) gain-bandwidth product and 6V/µs slew rate enabling high converter bandwidth.The output voltage of the converter can be regulated to as low as 0.597V with a tolerance of ±1.0%.
The **ISL8105** is a Buck Converter PWM Controller with Integrated MOSFET Gate Drivers. Utilizing voltage-mode control, the output voltage can be precisely regulated to as low as 0.6V. Two fixed oscillator frequency versions are available; 300kHz (ISL8105 for high efficiencyapplications) and 600kHz (ISL8105A for fast transient applications).
The **ISL8106** is a Single-Phase Synchronous-Buck PWM Controller with a 5V LDO regulator. A resistor divider is used to program the output voltage setpoint. The ISL8106 can be configured to operate in forced-continuous conduction-mode (FCCM) or in diode-emulation-mode (DEM), which improves light-load efficiency.

Programmable Switching Frequency PWM Controllers

The MAX15000/MAX15001 are current-mode PWM controllers containing all the control circuitry required, for the design of wide-input-voltage isolated and nonisolated power supplies.

- Package 10-Pin µMAX
- Operating temperature +85°C to -40°C
- Current-mode control
- Programmable switching frequency up to 625kHz
- Accurate UVLO threshold 1%
- Open-drain UVLO flag output with internal delay
- 36V to 72V telecom voltage range
- Universal off-line input voltage range
- Digital soft-start
- Internal bootstrap UVLO with large hysteresis MAX15000
- Internal error amplifier with 1.5% accurate reference
- 50µA typical startup supply current
- 60ns cycle-by-cycle current-limit propagation delay

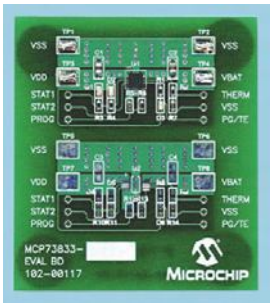
MCP73831 Evaluation Kit

Two evaluation boards are provided in the MCP73831 Evaluation Kit. The boards are set up to evaluate simple, stand-alone, linear charging of single cell Li-Ion / Li-Polymer battery packs (the battery packs are not included). Each board design provides constant current charging followed by constant voltage charging with automatic charge termination. In addition, the MCP73831-2AC board provides preconditioning of deeply depleted cells.



Each board design provides evaluation of the MCP73831 in two package options: a SOT23-5 and a 2 mm x 3 mm, 8-Lead DFN for higher power handling capability.

Features:
- 4.2V Charge Voltage
- Programmable Fast Charge Current up to 500 mA
- Preconditioning of deeply depleted cells (MCP73831-2AC)
- No Preconditioning (MCP73831-2DC)
- Automatic Charge Termination
- Charge Current Monitor

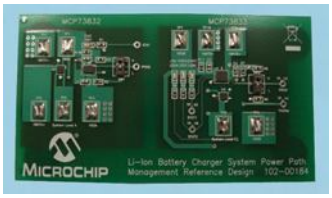
MCP73833 Li-Ion Battery Charger Evaluation Board

The MCP73833 Evaluation Board is an evaluation and demonstration tool for Microchip's MCP73833/4 Stand-Alone Linear Li-Ion/Li-Polymer Charge Management Controllers. Two independent circuits are provided (only one is populated) for charging single cell Li-Ion / Li-Polymer battery packs (the battery packs are not included). Each circuit design provides constant current charging followed by constant voltage charging algorithm with automatic charge termination and battery temperature monitoring. In addition, the installed MCP73833-FCI/MF provides preconditioning of deeply depleted cells and a safety timer.



The MCP73833 Evaluation Board provides for evaluation of the MCP73833/4 in two package options: a MSOP-10 (not populated) and a 3mm x 3mm, 10-Lead DFN for higher power handling capability (MCP73833-FCI/MF installed).

Features:
- Charge Voltage: 4.20V
- Programmable Fast Charge Current up to 1000mA
- Preconditioning of deeply depleted cells
- Automatic Charge Termination
- Automatic Recharge
- Battery Temperature Monitor
- Safety Timer
- Thermal Regulation
- Reverse Discharge Protection

MCP7383X Li-Ion System Power Path Management Reference Design

New

Portable electronics has played an important role in modern era. Due to the natural characteristics of Li-Ion / Li-Polymer batteries, they are the most popular power sources for mobile devices. However, extra care in design is always important to implement Li-Ion / Li-Polymer batteries. System Power Path Management allows end-users to charge their batteries without interruption.

This reference design is developed to assist product designers in reducing product design cycle and time by utilizing Microchip's favorite stand-alone Li-Ion battery charge management controllers with system power path management.

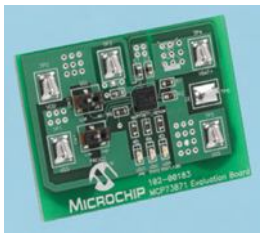
MCP7386X Li-Ion Battery Charger Evaluation Board



Features:
- Evaluation of MCP7386X devices in 4mm x 4mm, 16-Lead QFN packages
- Simple Stand-Alone Operation or Microcontroller Compatible
- Powered from external bench supply or wall cube
- Surface-Mount Design
- Fully Assembled and Tested

The MCP7386X Evaluation Board is set up to evaluate simple, stand-alone, linear charging of single/dual cell Lithium-Ion/Lithium-Polymer battery packs (the battery packs are not included). The board design provides constant current charging followed by constant voltage charging with automatic charge termination. As provided, the MCP7386X Evaluation Board is set for a fast charge current level of 1.1A for single cell applications. The MCP73861 is equipped with shutdown control, status indicator, fault indicator, safety timer, and continuous cell temperature monitor. For dual cell applications, the MCP73862 or the MCP73864 can be substituted for the MCP73861.

MCP73871 Evaluation Board

New

The MCP73871 Evaluation Board is designed to demonstrate Microchip's stand-alone linear Li-Ion battery charger with system power path and load sharing management control solution. The system load is also supported by the Li-Ion battery when input power is disconnected. A number of device options allow the MCP73871 device to be utilized in a variety of applications.

Features:
- Integrated System Load Sharing
- Three LED indicators for charge status, low battery and power good signal
- Input Current Limit Control with dip switches between ac-dc adapter (typical 1650 mA), USB-High (500 mA), and USB-Low (100 mA)

MCP1601 Buck Regulator Evaluation Board

The MCP1601 Buck Regulator Evaluation Board demonstrates Microchip's MCP1601 Synchronous Buck Regulator, developed for battery powered applications as well as distributed power applications. Two 2-position DIP switches are used, one to select the output voltage (1.8V, 2.05V, 2.45V or 3.28V) and one that turns the MCP1601 on and off with the other position selecting the mode of operation (PWM-pulse width modulation or PFM-pulse frequency modulation). Surface mount test points are used to apply power and load in addition to probing several points in the test circuit.

Features:
- Operates over a 2.7V to 5.5V input range while delivering 500 mA of output current
- One of four output voltages can be selected using the on-board switch
- Low noise fixed frequency PWM operation and light load PFM mode operation can be selected using the on board switch
- External frequency synchronization can be implemented using a 1 MHz external clock source
- ON/OFF switch for evaluating startup and shutdown operation

● MCP1630DM-DDBK4

The MCP1630 device demonstrates a high-speed Pulse Width Modulator (PWM) used for automotive application. When used in conjunction with a microcontroller, the MCP1630 will control the power system duty cycle to provide three regulated output voltages of 3.3V at 1.2A, 1.2V at 600 mA and 4.7V at 150 mA. The PIC12F683 microcontroller is used to provide reference voltage, ON/OFF of converter using push button SW1 and oscillator pulses at switching frequency of 250 kHz. The MCP1630 generates duty cycle based on various external inputs. External signals include the input oscillator pulses, reference voltage from PIC12F683 device, and the feedback voltage. The user can also modify or develop their own firmware routines to further evaluate the MCP1630 device in this application.

● MCP1630DM-DDBS1

The MCP1630/V demonstrates high-speed pulse width modulator used for automotive applications. When used with a microcontroller, the MCP1630/V devices control the power system duty cycle to provide regulated output voltage. The programmable PIC12F683 microcontroller is used to provide oscillator pulses at switching frequency of 500 kHz and set maximum duty cycle. The user may also modify or develop theirown firmware routines to further evaluate the MCP1630/V devices in this application.

● MCP1630DM-LED2

This demo board is a step-up, switch-mode, DC-DC converter used for power LED applications. The demo board provides a 350 mA or 700 mA constant current source with a jumper selection. The input operating voltage range is 9-16VDC and the board can supply up to 30W to a string of power LEDs.

● MCP1630RD-LIC2

This board is used to evaluate the MCP1630 device used in a SEPIC power converter applications. The charger is capable of charginga single-cell, Li-Ion battery pack utilizing an input voltage of 6V to 18V (battery packs are not included).

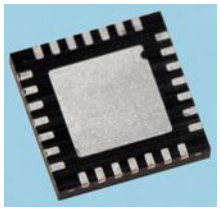
● MCP1650EV

The MCP165X demonstrates boost controller product family in two high-power, boost-converter applications.

● MCP3905EV

This evaluation board is designed to test out a variety of energy meter designs. On the input side high-voltage line and load AC-plug headers are included, along with mounting holes for shunts, current transformers and screw-type connections for wiring. On the output side a large prototype area is included along with optical isolation and a standard PICtail header for experiments with a variety of PIC MCU-based energy meter designs.

● MCP3905RD-PM1



A stand-alone low-cost energy meter that can act as either a stand alone energy meter, or as the analog front end design for LCD MCU-based meters. This design is specified with an energy measurement error of 0.1% typical across 1:500 dynamic range for high accurate energy meter designs and is compliant with EMC requirements per energy metering standards IEC62053 and legacy IEC61036, IEC1046 and IEC687.

Notebook Computer Battery Charger Controllers

intersil

28 QFN

24 QSOP

The Intersil ISL6252 & ISL6256 are high efficient battery charger controller for Li-Ion/Li-Ion polymer batteries. The low side MOSFET emulates a diode at light loads to improve the light load efficiency and prevent system bus boosting. The devices are capable of monitoring the current drawn and the presents of an AC adaptor. The ISL6256 automatically transitions from regulating current mode to regulating voltage mode.

- ±0.5% charge voltage accuracy
- ±3% input & battery charge current limit
- ±25% battery trickle charge current limit
- Programmable charge current limit, adapter current limit and charge voltage
- Fixed 300kHz PWM synchronous buck controller with diode emulation at light load
- Overvoltage protection
- AC & DC adapter present indicators
- Fast input current limit response
- Input voltage range 7V to 25V
- Support 2, 3 and 4 series Li-Ion/Li-Ion polymer cells battery pack
- Up to 17.64V battery-voltage set point
- Thermal Shutdown
- Less than 10µA battery leakage current
- Supports pulse charging
- Temperature range of -10°C to +100°C

Table of Battery Charge Current Limit

IRPP3637 Reference Designs

International IOR Rectifier

IR has expanded its myPOWER online design services with the introduction of the POWIR+™ chipset reference designs and enhanced online design services, to simplify and accelerate power management circuit design. The first series of POWIR+ chipsets brings together the IR3637SPbF and IR3637ASPbF application-tuned PWM control ICs and their companion HEXFET® MOSFETs for single-phase synchronous buck applications in computing and high-end consumer applications. The IRPP3637-12A reference design is a 12 amps version and users may modify any of the standard designs online at http://powirplus.irf.com to create custom circuits.

IRAC1150-D2 Control Design Kit

International IOR Rectifier

PFC control design kit featuring the IR1150 µPFC™ for AC-DC PFC, which is a small, 710 mm-sqaure (1.1-inch-square), fully-assembled PFC control circuit that engineers can drop in to an existing power supply, replacing its old continuous conduction mode (CCM) PFC circuit.Designing with the IR1150 is simplified with the aid of a two-step process online design tool: Users simply enter system requirements, and the design tool generates a complete bill of materials. The design tool simplifies

RL Re-reeling available

Farnell

active PFC development so that designers can replace old, passive solutions with poor power factors and low efficiency with modern, more efficient solutions.

Features:
- IEC1000-3-2 Compliant, Low Harmonic Distortion
- Universal Input Voltage
- Current Loop Controlled Power Limiting
- Brownout Protection
- Over voltage Protection - 420VDC nominal
- Open Feedback loop Protection
- 100kHz Switching Frequency, (User Programmable from 50kHz to 200kHz)
- Full Load Start Up with 40msec soft start time
- No Minimum Load Requirements and 390VDC nominal output voltage
- Sleep Mode Enable for Low Standby Current Requirement, (Blue Angel, etc.)
- VCC range 14V - 20V

POWIR+ Chipsets

IRPP3624-12A

International IOR Rectifier

IRPP3624-12A

Features:
- $12V_{in}$, 12A @ $1.8V_{out}$
- 29mm x 16mm footprint
- 83.3% efficiency
- adjustable hiccup over current protection
- pre-bias start up
- featuring IR3624MPBF PWM & driver IC and IRF7823PBF and IRF7832ZPBF SO-8 MOSFETs

495307

IRAC116-100W

International IOR Rectifier

Contents:
- assembled and tested demo board
- user guide
- schematic
- bill of materials
- circuit board layout
- datasheet

Features:
- +16V low side smart rectification 100W flyback
- universal AC input
- 16V @ 6.25A during active rectification mode
- featuring heatsink less secondary rectification
- employs IR1166SPBF smart rectifier controller and IRF7853 MOSFETs

IRDC3622D & IRDC3622S

International IOR Rectifier

IRDC3622D

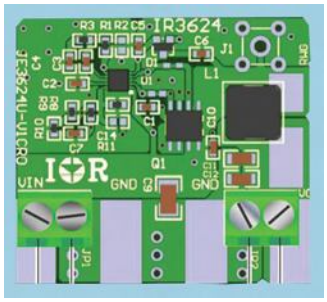
IRDC3622S

IRDC3622D

Features:
- dual output supply using dual synchronous buck controller
- $12V_{in}$, $2.5V_{out}$ @ 20A I_{out} and $1.8V_{out}$ @ 20A I_{out}
- 350 kHz switching frequency per output
- featuring IR3622MPBF PWM with IRF6622 and IRF6629 DirectFET MOSFETs

Mftrs. List No.	Order Code	Price Each
IRDC3622D	**143-6896**	101.67

IRDC3622S



Features:
- current sharing using dual channel synchronous buck controller
- $12V_{in}$, $2.5V_{out}$ @ 60A I_{out}
- 375 kHz switching frequency per output
- featuring IR3622MPBF PWM with IRF6622 and IRF6678 DirectFET MOSFETs

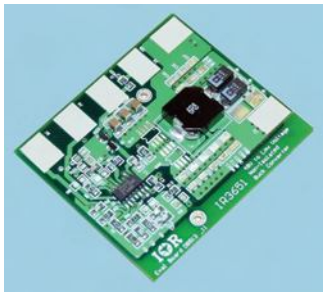
495374

Mftrs. List No.	Order Code	Price Each
IRDC3622S	**143-6897**	101.67

IRDC3624 Evaluation Board

International IOR Rectifier

IR3624 evaluation board using IRF8910 SO-8 dual MOSFET and 2 x 22µF ceramic output capacitors. The IR3624 IC is a synchronous Buck controller, providing a cost-effective, high performance and flexible solution. An output over-current protection function is implemented by sensing the voltage developed across the on-resistance of the synchronous rectifier MOSFET for optimum cost and performance.



Features:
- Programmable soft start ramp
- Fixed 600kHz switching frequency requiring no external components
- Input under-voltage lockout for proper start up
- Operates with Single 5V or 12V Supply
- Programmable Over Current Protection
- Hiccup Current Limit Using MOSFET RDS(on) sensing
- Precision Reference Voltage (0.6V)
- Programmable Soft-Start
- Pre-Bias Start-up
- Thermal Protection
- Evaluation board settings V_{IN} = +12V, (13.2V Max), V_{OUT} = +1.8V @ 6A

494503

Mftrs. List No.	Order Code	Price Each
IRDC3624	**143-6884**	148.28

IRDC3651

International IOR Rectifier

Features:
- wide input synchronous buck regulator
- ideal for onboard DC to DC applications
- $48V_{in}$, $3.3V_{out}$ @ 10A I_{out}
- 100 kHz switching frequency
- featuring IR3651SPBF
- foot print compatible with either Direct-FETs or SO-8 MOSFETs

Contents:
- assembled and tested demo board
- user guide
- schematic
- bill of materials
- circuit board layout
- datasheet
- DC to DC power management CD

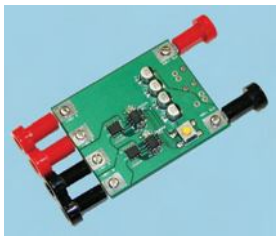
Power Supply ICs - continued

IRDCIP1203-A

International IOR Rectifier

A reference design capable of delivering a continuous current of 15A (with heatsink) or 12A (without heatsink) at an ambient temperature of 45°C and airflow of 300LFM.
The components installed on the demoboard are selected based on operating at an input voltage of 12V (+/-10%) and a switching frequency of 400kHz (+/-15%). Major changes from these set points may require omtimizing yhe control loop and/or adjusting the values of the input/output filters in order to meet the user's specific application requirement.



Features
- 5.5V to 13.2V Input Voltage
- 0.8V to 8V Output Voltage
- 15A Maximum Load Capability
- 200-400kHz Nominal Switching Frequency
- Over Current Hiccup
- External Synchronization Capable
- Overvoltage Protection
- Over Temperature Protection
- Internal Features Minimize Layout Sensitivity
- Very Small Outline 9mm x 9mm x 2.3mm
- Reference design setup I_{OUT} up to 15A, V_{IN} = 5,5V to 13.2V, V_{OUT} = 1.0V - 3.3V, fS = 400kHz

IR IRDC5001-LS48V

International IOR Rectifier

200W, -48V dual input active OR-ing design kit featuring IR5001S and IR7495 which can be used to implement Reverse Polarity protection for -48V input DCDC converters.
Another unique feature of the IR5001 is that it allows system designers to assess the power redundancy status on their system boards - whether the ORing FETs are good or not. Applying a logic high at the FET Check" pin will toggle the output of the IR5001 driver OFF. The desired outcome is that thevoltage across the FET, V_{ds}, will rise above 0.3V. When FET check" is initiated for the MOSFET initially being on, a comparator inside IR5001 compares the V_{ds} voltage to a reference voltage of 0.3V. If the Vds voltage is over 0.3V, the comparator sends a logic-low signal at the FET Short" pin, indicating that the FET is working properly.

SiP 280x Low Power Consumption Current Mode Controllers

VISHAY

The SiP280x family is a range of high-speed, low power consumption, BiCMOS Current Mode Controllers. Each IC contains all of the control and drive functions required for off-line and dc-to-dc current mode switching power supplies. The range is designed to allow full designs using the minimum number of external parts.

Features:
- Pin-for-Pin compatible with UCC280x Controllers
- 100µA Typical Start-Up Current
- 500µA Typical Operating Current
- Internal Soft Start at Power-On and After Fault

Applications:
- DC/DC Converter Modules
- Offline (AC/DC) Power Supplies
- Universal Input Power Supplies
- Buck-Boost Converters

PSU Switchers

ON Semiconductor

New eries integrates a fixed-frequency current-mode controller and a 700 V voltage MOSFET. The NCP101X offers everything needed to build a rugged and low-cost power supply high voltage switcher for Medium Power Offline Switch Mode Power Supplies. Peak current is fixed at 800mA operating at 65kHz & 100 kHz.
- NCP1271 is a Soft Skip Mode Standby PWM Controller with Adjustable Skip Level and External Latch. Typical source and sink drive current are 500mA & 800mA respectively.
- The NCP3063 is a 40V input DC/DC converter voltage regulator, suitable for high power LED lighting & battery chargers.
- The NCP3163 is an adjustable 50 kHz to 300 kHz switching regulator.

TOPSwitch-FX Integrated Off-line Switcher

TOPSwitch-FX family uses the TOPSwitch topology but extends on the power range while integrating many new functions designed to reduce system cost, improve design flexibility, performance and energy efficiency.
Like the TOPSwitch, the high voltage power MOSFET, PWM control, fault protection and other control circuitry are all integrated onto a single CMOS chip, but with two added terminals namely; the Multifunction and Frequency pins.

TOPSwitch-GX Integrated Off-line Switcher

TOPSwitch-GX family uses the TOPSwitch-II topology but extends on the power range while integrating many new functions designed to reduce system cost, improve design flexibility, performance and energy efficiency.

The devices feature: soft-start, 132kHz switching frequency, frequency jittering for lower EMI, wider DCmax hysteretic thermal shutdown and larger creepage packages.

TYN27/28 Series - Off Line Switchers

With Enhanced Flexibility and Extended Power Range

TYN27/28 Series incorporates a 700 V power MOSFET, oscillator, high voltage switched current source, current limit (user selectable) and thermal shutdown circuitry. The IC family uses an ON/OFF control scheme and offers a design flexible solution with a low system cost and extended power capability.

TNY375-380 Series - Off Line Switchers

Energy Efficient with Enhanced Peak Power Performance

The TinySwitch-PK incorporates a 700 V MOSFET, oscillator, high voltage switched current source, current limit (user selectable), and thermal shutdown circuitry. A unique peak mode feature boosts current limit and frequency for peak load conditions. The boosted current limit provides the peak output power while the increased peak mode frequency ensures the transformer can be sized for continuous load conditions rather than peak power demands.

PKS60 Series - Off Line Switchers

With Super Peak Power Performance

Off Line Switchers are designed to address applications with high peak to-continuous power ratio demands. The very high switching frequency during peak power loads and excellent load transient response reduce system cost as well as component count and size

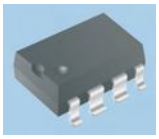
LinkSwitch™ Adapter and Charger Switcher



LinkSwitch™ is designed to replace low power linear transformer/RCC chargers and adapters with a higher performance and energy efficiency. LinkSwitch integrates a 700V power MOSFET, PWM control, high voltage start-up, current limit and thermal shutdown circuitry in a monolithic IC. LNK500 is a lower cost version of the LNK501 with a wider tolerance and constant current(CC) characteristic.

DPA-Switch™ Integrated DC -DC Converter Switcher

DPA-Switch™ family uses the same topology as TOPSwitch, cost effectively integrating the high voltage power MOSFET, PWM control, fault protection and other control circuitry in a single CMOS chip.
With three user configurable pins, the device can be configured to allow line sensing, accurate externally set current limit, remote ON/OFF, synchronisation to an external lower frequency and frequency selection (300/400 KHz)

Power Integrations Device Circuit Reference Guides

● RDK-83
This is a reference design for a switched-mode power supply that was designed to replace line frequency transformer based solutions. The supply uses a member of the LinkSwitch-LP family of devices, and is capable of withstanding common-mode line surges of up to 10 kV. That is often a requirement for applications that connect to a telephone line.

● RDK-91
This report describes a universal input, 12 V @ 1 A flyback power supply using a TNY278PN device from the TinySwitch-III family of ICs. It contains the complete specification of the power supply, a detailed circuit diagram, the entire bill of materials required to build the supply, extensive documentation of the power transformer, along with test data and oscillographs of the most important electrical waveforms. The board provides a number of user configurable options which are designed to demonstrate the features and flexibility of the TinySwitch-III family. These include easy adjustment of the device current limit for increased output power or higher efficiency operation, and a latched output overvoltage shutdown.

● RDK-93
This document is an engineering report describing a 90-265 VAC input, 30V, 1.07A continuous, 2.7A peak output power supply utilizing a PKS606Y. This power supply is intended as a general-purpose evaluation platform for PeakSwitch, and is ideal for applications where a significant pulsed output load is required, such as printers, audio amplifiers, DVRs and DC motor drives.

● RDK-115
This document is an engineering report describing a four output flyback power supply utilizing a TNY376PN. This power supply is intended as a general purpose evaluation platform for TinySwitch-PK.

● RDK-128
This document is an engineering report describing a motor drive power supply capable of delivering up to 36 W of continuous power and up to 72 W of peak power, utilizing a PKS606YN device. This power supply is intended as a demonstration platform for the PeakSwitch family of devices and their application in motor drives. The PeakSwitch family of devices is ideally suited to this role due to their ability to provide very high peak power for short periods of time, as is often encountered in motor drive applications.

RL Re-reeling available

● RDK-131
This design kit is intended for energy-efficient LED alternatives to replace incandescent lights. The kit helps designers produce a power circuit that fits inside the LED lightbulb socket, and also ensure that their incandescent-replacement LED lightbulbs will pass EMC requirements for conducted and radiated electrical noise.
● RDK-142
This document is an engineering report describing a LCD Monitor power supply utilizing a TOP258PN. This power supply is intended as a general purpose evaluation platform for TOPSwitch-HX.

Design Accelerator Kits (DAK)

Design Accelerator Kits (DAK) provide the essential materials to get started on your next power supply design.
All kits include product samples, a fully assembled, tested and functional reference board. Complete documentation including a comprehensive engineering report and data sheet.

DAK-7.
Developed specially for Home Appliance applications and will help the designer to evaluate the **TinySwitch**™ family of integrated switchers.

DAK-16A.
2.75W, 5.5V Linear transformer replacement charger. Provides the essential materials to get started on power supply design using the LNK500 and LNK501 devices.

DAK-21.
30W, 5V DC-DC converter. Essential for the design and prototyping of the **DPA-Switch** family. The working engineering sample effectively demonstrates the simplicity of the DPA chips and the advantage of drastically reduced external component count.

DAK-71.
6.6W DC-DC Converter using **DPA-Switch.**™ This kit is intended to assist evaluation of **DPA-Switch** devices in the 8-pin DIP, low cost surface-mount package. It is an ideal choice for standby supplies or other low power applications operating from telecom input voltages.

THS61020 Evaluation Module

This Evaluation Tool is for the TPS61020 inductive step-up converter. It can supply voltages up to 5.5V from a 0.9V to 6.5V input featuring an LDO down-mode regualting the output voltage even if the input voltage exceeds the output voltage level. The TPS61020EVM-025 uses a TPS61020 adjustable output step-up converter and external components to provide a 3.3V output voltage. The feedback components can be replaced to generate other voltages. This EVM can also be used to evaluate other options in the TPS6102x family.

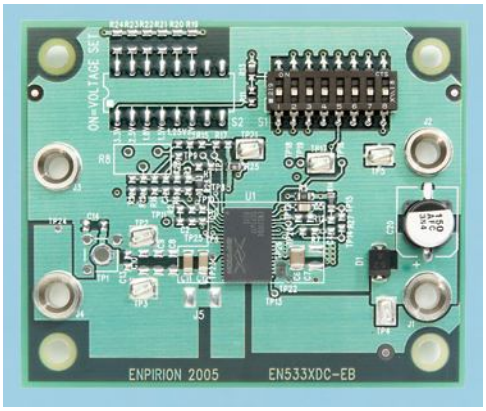
TPS40200EVM-001 Evaluation Module



TPS40200EVM-001 is designed to operate with an 8V to 16V input and to produce a regulated 3.3V output with a load current from 0.125A to 2.5A. The TPS40200EVM-001 demonstrates the use of the TPS40200 in a typical buck converter application. The board sacrifices some packing density to provide ample test points for module evaluation. This EVM can be modified to support output voltages from 0.7V to 5V by changing a single feedback resistor.

Features:
- 8 V to 16 V input range
- 3.3 V output, adjustable with single feedback resistor
- 0.125 A to 2.5 A steady-state output current
- 300 kHz switching frequency
- Single P-channel MOSFET and single rectifier
- Two-layer, 1.4 inch x 2.12 inch, surface-mount design with all components on one side
- Convenient test points for probing critical waveforms and noninvasive loop response testing

Synchronous Buck Converters

EN5310DC-E

A range of 1A, 3A and 6A Voltage Mode Synchronous Buck PWM DC-DC Converters and Evaluation Boards. These products are designed to meet the precise voltage and fast-transient requirements of high-performance, low-power processor, DSP, FPGA, memory boards and system level applications.

Features:
- Hltra-High Switching Frequency
- Programmable soft-start time
- Programmable over-current protection
- Thermal shutdown, short circuit, over-voltage and under-voltage protection
- 5MHz Operating Frequency
- More than 90% efficient
- Input volatge range: 2.375V to 5.5V
- Adjustable Output voltage range: 0.8V to 3.3V

Simple Switcher Voltage Regulators

LM2594/LM2597 families :- The complete DC to DC converter circuit size is reduced by approximately 50% compared to the original LM257X Series.
LM2597 family also offers :- shutdown, soft-start and error flag. (BUCK=Step-Down, FLYBACK/BOOST=Step-Up)
LM22670/LM22679 are fixed and adjustable voltage regulators with current output from 0.5A to 5A.
LM3150/LM3153 are regulatorswith output current from 12A to 15A.

LM2825 Simple Switcher®

National Semiconductor

A complete 1A DC-DC Buck converter in a 24 pin DIL package. Self-contained and fully protected from output fault conditions, these high efficiency step-down regulators are available in 3.3V, 5.0V, 12.0V and Adjustable output voltages.

The family features include:

- Line and Load regulation
- High power density
- MTBF >20 million hours
- TTL shutdown capability and programmable soft-start
- Low output ripple
- EMI radiation compliant with CISPR22 Class B

Smart Power Modules (SPM™)

FAIRCHILD SEMICONDUCTOR

SPM™ (Smart Power Module) provides complete adjustable-speed motor drive control and fully integrated circuit protection for ac motors found in appliance applications such as washing machines and air conditioners, in compact Dual In-line Packages. Compared to discrete IGBT solutions, the SPM requires less than half the board space, while providing low-voltage control and high-voltage output stage rated at 10~20A at 230Vac. The SPM comes in a small (60 x 31mm), ceramic-based transfer molded-type package that optimises heat transfer from the IGBTs. The high-speed high voltage control circuit eliminates the need for opto-couplers and allows the IGBTs to be driven by a single bias supply. The built-in advanced current-sensing IGBT chips provide short-circuit current detection and protection. Other features of the SPM products include built-in high- and low-speed controls and an optional thermistor for over-temperature monitoring.

iMOTION™ Series Power Modules

International IOR Rectifier

This range of Power Modules are designed for a number of applications, including compressor drives, fan controls, air conditioning systems and light inductrial applications. They feature an in-built temperature monitor and over-current protection, short-circuit rated IGBTs an integrated under-voltage lockout function. They deliver a high level of protection and fail-safe operation. The iMOTION™ Series Power Modules are available in variations on a Single In Line package as detailed in the relevant datasheets.

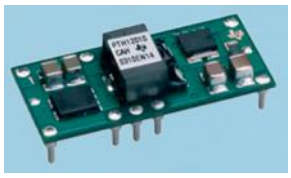
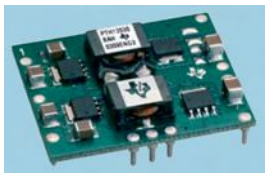
Plug-in Power Modules

Texas Instruments





A range of surface-mount, plug-in power (PIP) modules designed to be small in size but with high performance and flexibility. Covering a range of output currents and input voltages, the power modules are suitable for use in telecom, industrial and general purpose circuits. Features include an on/off inhibit, output voltage adjust (trim) and margin up/down controls, as well as a non-latching over-current trip to serve as a load fault protection.

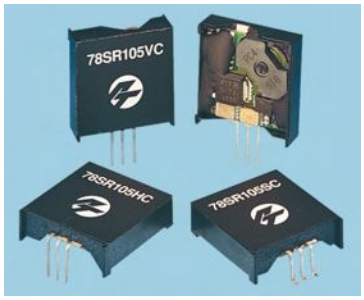
Plug-in Power Modules



A range of non-isolated power modules designed to be small in size but with high performance and flexibility. Covering a range of output currents and input voltages, the power modules are suitable for use in telecom, industrial and general purpose circuits. Features include an on/off inhibit, output voltage adjust (trim) and margin up/down controls, as well as a non-latching over-current trip to serve as a load fault protection.

Power Supply ICs - continued

Integrated Switching Regulators

The 78SR1 and 79SR1 Series are a line up of 3-terminal Integrated Switching Regulators (ISRs) that are as easy to use as linear 3-terminal regulators. These positive and negative step down ISRs have a maximum output current of +1.5A and -1.5A, input voltage ranges of up to +30V and -30V, respectively. These Series have an output voltage that is laser trimmed to industry standard voltages. They have excellent line and load regulation with internal short circuit and over-temperature protection.
These Series offer >85% efficiency. The 78SR1 Series is ideal for solving heat/space/reliability problems in a wide variety of industrial applications. The 79SR1 Series is ideal for applications in RS232 systems, Ethernet communications, logic and in Op-amp circuitry.

Integrated Switching Regulators

The Integrated Switching Regulators (ISR) are easy to use positive and negative stepdown regulators, with PT5041 as setup regulator, offering >85% efficiency. The output voltages are laser trimmed to industry standard voltages with excellent line and load regulation. The ISR line up is suitable for a multitude of applications including Ethernet comms, logic, RS-232, op-amp circuitry, disk drive motors and battery powered equipment.

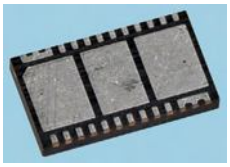
DC/DC Boost Regulators

The **SP6641** is an ultra-low quiescent current, high efficiency, DC-DC boost converter designed for single and dual cell alkaline, or Li-ion battery applications found in PDA's, MP3 players, and other handheld portable devices. The SP6641 features a 10µA quiescent current, a 0.3Ω N-channel charging switch, 0.9V input startup, and a 0.33A or 1.0A inductor current limiting feature. The SP6641 is preset to 3.3V or 5.0V version and can be controlled by a 1nA active LOW shut down pin.
The **SP7648** is an ultra-low quiescent current, high efficiency step-up DC-DC converter ideal for single cell Li-Ion or dual cell alkaline battery applications to drive various LEDs. The SP7648 combines low quiescent current and excellent light-load efficiency of PFM control.



The SP7648 features synchronous rectification, a 0.3Ωcharging switch, an anti-ringing inductor switch, under-voltage lockout and programmable inductor peak current. The device can be shut down by a1nA active LOW shutdown pin. A very low 0.288V reference voltage is optimized for driving a constant current load.

The **SP6659** is a 600mA synchronous buck regulator using a constant frequency, current mode architecture. The output voltage can be programmed using an external resistor divider. The 2.5V to 5.5V input voltage range is ideal for portable applications that use a Li-Ion battery. The internal synchronous switch increases efficiency and eliminates the need for an external Schottky diode.

The **SP7661,2,3** are a synchronous step-down switching regulator optimized for high efficiency. The device uses the input voltage to drive the circuit which is a single supply operation. If the input voltage is less than 4.75V then an external voltage is required, hence dual supply operation. The ICs provides a fully integrated buck regulator solution using a fixed frequency, PWM voltage mode architecture. Protection features include UVLO, thermal shutdown, output current limit and short circuit protection.

TFT-LCD DC/DC with Integrated Amplifiers

Single chip with one, three & five ampliers.

The EL7640,1 & 2 integrate a high performance boost regulator with 2 LDO controllers for VON and VOFF and a VON-slice circuit with adjustable delay. The boost converter is a current mode PWM type integrating an 18V N-channel MOSFET. Operating at 1.2MHz, this boost can operate in either P-mode for superior transient response, or in PI-mode for tighter output regulation.

- Current mode boost regulator featuring fast transient response
- 1% accurate output voltage maximun 18V/3A integrated FET
- Supply voltage 2.6V to 5.5V
- 2 LDO controllers for VON and VOFF
- 2% output regulation
- VON-slice circuit
- 150mA short-circuit output current
- 12Vμ/s slew rate
- 12MHz -3dB bandwidth
- Rail-to-rail inputs and outputs
- Built-in power sequencing
- Internal soft-start
- Multiple overload protection
- Thermal shutdown
- 32 Ld 5x5 thin QFN package
- Temperature -40°C to +85°C

- The Electric Field Image Detector MC34940 is intended for cost-sensitive applications where non-contact sensing of objects is desired. When connected to external electrodes, an electric field is created which is used detect objects within the field. This device can support seven electrodes and 28 touch pad sensors.
- The Manifold Absolute Pressure sensors are used for engine control. It is designed to sense absolute air pressure within the intake manifold. This measurement can be used to compute the amount of fuel required for each cylinder.
- The Piezoresistive transducers are monolithic silicon pressure sensors designed for a wide range of applications, but particularly those employing a microcontroller or microprocessor with A/D inputs. This transducer combines advanced micromachining techniques, thin-film metallization, and bipolar processing to provide an accurate, high level analogue output signal that is proportional to the applied pressure.

QProx™ Charge-Transfer Capacitance Sensor ICs

QTouch

This is a proximity sensing technology utilising the minute changes in capacitance when a target sensing area is approached.
The technology allows for touch or proximity sensing through almost any dielectric which offers an almost limitless number of applications where normal mechanical switches are used. The range of devices includes variants which have enhanced properties, such as matrix sensors in which keyboards may be fabricated behind sealed glass or perspex, level sensors to detect the presence of liquids, extended range sensing to detect through a dielectric such as glass, plastic, stone or ceramic up to thicknesses of 5cm or more.

Features:
- Less expensive than many mechanical switches
- Touch or proximity sensing through any dielectric
- 100% autocal for life - no adjustments required
- QT11x series features 2.5V to 5V, low current single supply operation
- Active high or active low output variants
- Turn metal-bearing objects into intrinsic sensors

Applications:
- Pushbutton replacement
- Machine controls
- Lighting controls
- Moisture detection
- Level sensing
- Security sensing
- Robotic touch sensors
- Vandal resistant controls

E6248 Evaluation Kit

QTouch

The E6248 Evaluation Kit is designed for the evaluation and develpment of the QT60248 and QT60168-based behind-the-panel touch matrix circuits. All the required circuitry and materials are included to make a fully-functioning, 24 key matrix touch control. The board has a virtual RS232 serial interface via the USB port that allows connection to a PC for function setup and data viewing. In 'Standalone Board Mode' a 24 key matrix panel is integrated into the E6248 together with LED key indicators. A PC running Windows 2000, XP or upwards, with a free USB socket is required.
A 14-pin header allows connection to an external power matrix if required. The board is operated by connection to a live USB socket.

Kit Includes:
- 1x E6248 eval board
- 1x USB cable
- 1x SPI cable for direct connection to the QT60248
- 1x CD-ROM with software and drivers
- 1x User guide
- 2x QT60248 samples

Evaluation Kit For QT100

QTouch

The E100S evaluation board demonstrates the QT100 chip in a typical application; a simple through-panel single-switch. The E100S illustrates how a QTouch solution requires only a very simple circuit design and a minimum of external components The kit includes the board and 2 additional QT100 ICs.

E6486 Evaluation Board

QTouch

The E6486 Evaluation Board allows the development of control panels using the QT60486 Qmatrix™ Sensing Chip. The chip is a matrix touch controller and can sense upto 48 keys using a patented scanned capacitive matrix. The PCB is is single sided and can be warped to be fitted inside curved or small control panels if necessary. The E6486 evaluation board is compatible with a PC and comes with QmBtn™ software which allows alteration of internal parameters in order to suit the desired application. The signal can be viewed in real time. The E6486 comes with a sensing foil, this can be adhered to the back of a control panel of any shape depending on the application, the sensitivity can be adjusted on a key to key basis and the touch sensor is not affected by moisture. Possible uses for this touch sensitive equipment include kitchen appliances and other domestic equipment as well as industrial use.

QWHEEL/QSLIDE + 7 KEY Evaluation Kit

QTouch

This kit is designed for the evaluation and development of applications using theQT60160/QT60240 IC. The kit includes an evaluation assembly, cables and QmBtn software. Each E6240 assembly has a serial (USB) interface allowing connection to a computer for control and data viewing via QmBtn computer software.
This unique IC allows designers to create controls for various applications such as mobile phones, remote controls and MP3 players, amongst others.

Kit Includes:

- 1 x E6240 assembly (fitted with a QT60240 IC)
- 1 x USB-computer cable
- 2 x sample QT60240 ICs
- 1 x CD-ROM containing QmBtn software version 3.29 or later, User Manual and other information

16 and 24 Key Matrix Evaluation Kit

QTouch

QT1106 charge-transfer (QT) QTouchTM IC is a self-contained, patented charge-transfer capacitive controller capable of detecting near-proximity or touch on up to seven electrodes and a wheel. It allows electrodes to project sense fields through any dielectric such as glass or plastic. These electrodes are laid out as a scroller (e.g. a wheel or slider) plus seven additional independent keys. Each key channel can be tuned for a unique sensitivity level by simply changing a corresponding external Cs capacitor, whereas the wheel/slider's sensitivity can be changed dynamically through SPI commands.
The wheel/slider uses a simple, inexpensive sensing element between three connection points. The QT1106 can report a single rapid touch anywhere along the sense elements, or it can track a finger moving along the wheel/slider's surface in real time. The device is designed specifically for human interfaces, like control panels, appliances, gaming devices, lighting controls, remote controls, or anywhere a mechanical wheel, slider, or switch may be found.

- Patented charge-transfer (QT) design
- Wheel or Slider plus seven extra keys
- QMagic™ proximity effect for approach on function
- Fast thermal drift tracking
- 2.8V ~ 5.0V single supply operation
- 100% autocal for life - no adjustments required
- Spread-spectrum bursts for superior noise rejection

E102 Evaluation Kit

QTouch

New

This kit is designed for the evaluation and development of applications using the QT102-ISG Integrated Circuit. It demonstrates the device in an example through-panel, toggle mode application. Bond pads, located on the evaluation board, provide a convenient method to connect external sensors or to control applications using the on-board sensor.

Kit Contents:

- 1x E102 Evaluation Board
- 1x CR2032 Battery
- 2x QT102-ISG ICs Samples
- 1x E102 User Guide
- Example Ct (47nF, 100nF) & Rt (51kΩ, 150kΩ) Components

FirstTouch™ Kit

CYPRESS PERFORM

The PSoC® FirstTouch™ Kit allows the user to run touch sensing demonstration projects. These include CapSense Touch Sensing, Temperature Sensing, Light Sensing and CapSense Proximity Sensing.

The kit includes a USB interface dongle (FTPC bridge), and a multifunction expansion card (FTMF Expansion Card).The FTMF Expansion Card contains a CY8C21434 PSoC that acts as the host for various demonstrations.The FTPC bridge portion of the kit contains a programmed Cypress CY8C24894 PSoC that performs all of the USB and expansion card interface functions. The firmware that is run by this PSoC performs the primary functions listed.

Primary Functions:
- Functions as a USB physical and logical interface
- Provides PSoC MiniProg emulation for In System Serial Programming (ISSP™) of the expansion cards
- Provides communications with the PSoC programming utility
- Performs HID data channel communications
- Performs expansion card I2C communications
- Performs expansion card SPI communications

The FTMF Expansion Card supports the following PSoC powered peripheral applications:
- CapSense Touch Button
- CapSense 7-Element Touch Slider
- CapSense Non-Touch / Proximity Detection
- Ambient light-level detection
- Thermistor-based temperature measurement

PSoC FirstTouch Starter Kit & Environmental Sensing Kit

CYPRESS PERFORM

CY3271

CY3271-EXP1

New

The **CY3271** Starter Kit allows evaluation of the PSoC programmable system-on-chip and CyFi low-power RF in CapSense™ touch-sensing, proximity-sensing, temperature-sensing, and light-sensing applications. It includes a PC dongle with RF, an RF expansion card with power amplification for long-range applications, a multifunction expansion card, and two battery packs (2xAAA and CR2032). It also features the PSoC Designer IDE and Cypress's Sense and Control Dashboard software.

The **CY3271-EXP1** is an expansion kit for the CY3271 PSoC FirstTouch Starter Kit. Included in the kit are two boards; the Weather Station Expansion Board (atmospheric pressure, humidity, temperature, and ambient light) and the Pigtail Thermistor Expansion Board. The Sense & Control Dashboard (SCD) from the CY3271 Kit lets users quickly setup and monitor a wired or wireless sensor network through an intuitive visual dashboard. Easily demonstrate features such as data logging, data aggregation, alarms, and sensor calibration for nearly any type of sensor.

Universal PSoC® CapSense™ Controller Development Kit

CYPRESS PERFORM

New

The CY3280-BK1 Universal PSoC® CapSense™ Controller Kit is designed for easy development and debugging of any CapSense design. It includes pre-defined control circuitry and plug-in hardware, along with controller boards for both the CY8C20x34 and CY8C21x34 PSoC devices. It also offers a breadboard module and a module for implementing up to five buttons and a slider with sample overlays to encompass a wide variety of designs.

The kit works with both PSoC Designer™ and PSoC Express™, and allows for monitoring and tuning of CapSense designs via an I2C-to-USB bridge that is included in the kit. Cypress is unique in offering real-time monitoring and tuning, which can significantly reduce development cycles. The kit supports both the CapSense Successive Approximation (CSA) and Sigma-Delta (CSD) capacitive sensing methods. CSA offers outstanding interference immunity and low power consumption, making it ideal for portable consumer applications. CSD delivers flawless operation in wet conditions, and offers superb temperature response, ideal for white goods and other moisture-sensitive systems.

CapSense Express Evaluation Kits

CYPRESS PERFORM

New

These CapSense Express evaluation kits enables designers to replace mechanical buttons or sliders (dependant on kit) by implementing touch sensing designs in minutes with the newest CapSense Touch Sensing Family, CapSense Express. With the PSoC Express™ visual embedded system design tool and CapSense Express configuration tool, designers configure, monitor, and tune I/Os for buttons or sliders, LEDs, and other general purpose I/Os over I2C in a real time using a graphical user interface.

Features:
CY3218-CAPEXP1:
- Up to 10 I/O for Buttons
- 3 CapSense buttons with Monitoring and Tuning for Sensitivity Adjustments
- 3 Backlighting LEDs
- 3 Status LEDs
- 1 Mechanical button

CY3218-CAPEXP2:
- Up to 10 I/O for Sliders
- 5 Segment CapSense Slider with Monitoring and Tuning for Sensitivity Adjustments
- 4 Status LEDs
- 1 Mechanical button

CY3218-CAPEXP3:
- Up to 4 I/O for Buttons
- 2 CapSense buttons with Monitoring and Tuning for Sensitivity Adjustments
- 2 Status LEDs

MPR083 8-Position Rotary Sensor Controller

KITMPR083EVM

DEMOMPR083

The 8-position rotary proximity sensor controllers are Inter-Integrated Circuit Communication (I2C) driven Capacitive Touch Sensor Controllers, optimized to manage an 8-position rotary shaped capacitive array. The device can accommodate a wide range of implementations through 3 output mechanisms, and many configurable options.
The evaluation kit allows designers to easily evaluate the proximity sensor controller in any application, specifically capacitive touch sensing. The connector offers access to all electrodes, enabling you to connect the touch pad board or any other electrode design of your choosing.
The demonstration board is a stand-alone board that offers a simple demonstration of the capability of the 8-position rotary proximity sensor controller using an example configuration of 8 touchpads.

Evaluation kit and demonstration board features:
- Sample electrode board demonstrates rotational sliders
- Machined plastic cover for front panel non-contact touch evaluation
- Access to all 8 electrodes
- A Graphical User Interface that gives the user the ability to set many operational parameters (evaluation kit only)
- USB Connectivity (evaluation kit only)

Evaluation kit contents:
- MPR083 Proximity Sensor Controller
- Sample rotary pads
- Standard 15 pin header
- LEDs - 1 for PWR, 1per Pad
- Resistors - for each electrode
- Processor - MC68HC908JB8JDW
- 8 pad Rotary - Reference design
- USB connectivity for power and PC access
- USB cable

MPR083 features:
- 25 μA low power mode
- Variable low power mode response time (10 ms - 10 s)
- Rejects unwanted multi-key detections from EMI events such as PA bursts or user handling
- Ongoing pad analysis and detection is not reset by EMI events
- Data is buffered in a FIFO for shortest access time
- IRQ output advises when FIFO has data
- System can set interrupt behavior as immediate after event, or program a minimum time between successive interrupts
- Current rotary position is always available on demand for polling-based systems
- Sounder output can be enabled to generate key-click sound when rotary is touched
- Two hardware selectable I2C addresses allowing two devices on a single I2C bus
- Configurable real-time auto calibration

DEMO1985MC34940E Demonstration Kit

For the MC34940 E-field Sensing Device

This demo Kit features the MC34940 e-field sensing device that is intended for applications where non-contact sensing of objects is desired. It contains circuitry necessary to generate a low-level electric field and measure the field loading caused by objects moving into the field. The kit allows for designers to easily evaluate the MC34940 in any application. The connector offers access to all electrodes, enabling you to connect your own touch pad design or any other electrode arrangement of your choosing.

Features:
- Supports up to 7 Electrodes
- Shield Driver for Driving Remote Electrodes Through Coaxial
- High-Purity Sine Wave Generator Tunable with External Resistor
- Response Time Tunable with External Capacitor
- Can support up to 28 touch pad sensors

AccessTouch

Touch Sensitive Keyed Access Controller

AccessTouch is an integrated combination key access controller using capacitive touch sensing technology and featuring tough-sensitive keys for vandal-proof operation. The PCB keyboard shown can be overlaid by a non-metallic covering. It automatically calculates signal averages to compensate for track capacitance, water splashes, etc. A buzzer output provides audio feedback as buttons are pressed.

The unpopulated board includes provision for:
- 20-pin, 28-pin and 40-pin DIL USB devices
- Type B socket, suitable for standard USB cables
- Type A plug, suitable for USB extension cables
- Prototyping area
- RS232 line driver, 9-pin sockets in DTE and DCE configurations
- RS485 line driver
- Coin cell battery
- SPI serial memory
- 28-pin DIL host processor
- 3 active low LEDs
- 3 active high LEDs
- 3 jumpers
- Photodiode
- Thermistor

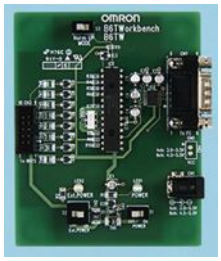
Proximity EFID sensor



The MC33794 is an Electric Field Imaging Device, intended for use in detecting objects in an electric field, when connected to external electrodes. The IC generates a low-frequency sine wave with very low harmonic content to reduce harmonic interference. It is adjustable by using an external resistor and is optimized for 120 kHz. It also contains support circuits for a MCU to allow the construction of a two-chip E-field system.

- Supports up to 9 electrodes and 2 references or electrodes for measurement
- Shield driver for driving remote electrodes through coaxial cables
- The sensor has a +5.0 V regulator to power external circuit
- The device connects to an ISO-9141 bus to allow remote communications
- Lamp driver output
- Watchdog and power-on reset timer
- Critical internal nodes scaled and selectable for measurement
- High-purity sine wave generator tunable with external resistor

B6TW Workbench

- Runs on Windows PCs (Windows XP and 2000 recommended)
- Connects with a PC via serial communication
- Parameter setting function
- Operation monitor function
- Capacitance calculation function
- Comes with an evaluation board for four or eight channels for immediate evaluation:
  Four channels: B6TW-S04LT
  Eight channels: B6TW-S08NF

Contents:
- B6TS I/F Board (B6TW)
- Serial communication cable (Dsub 9pin cross)
- CD-ROM
- Sample board (B6TY-S04LT or B6TY-S08NF)
- Flat cable

Pressure Sensors

freescale semiconductor

The MPX series devices are a silicon piezoresistive pressuresensor providing a highly accurate and linear voltage output directly proportional tothe applied pressure. The sensor is a single, monolithic silicon diaphragm with the strain gauge and a thin-film resistor network integrated on-chip. The chip is laser trimmed for precise span and offset calibration and temperature compensation.
Within the MPX series MPX4 are dedicacted Manifold Absolute Pressure sensor for the engine, designed to sense absolute air pressure within the intake manifold. This measurement can be used to compute the amount of fuel required for each cylinder.

Energy Harvesting Modules

ADVANCED LINEAR DEVICES, INC.

The EPAD® ENERGY HARVESTING™ Modules can accept energy from many types of electrical energy sources. It then stores this energy to power conventional 3.3V and 5.0V electrical circuits and systems. These modules can work with instantaneous input voltages ranging from 0.0V to ±500V AC or DC and input currents from 200nA to 400mA from energy harvesting sources that produce electrical energy in a steady or intermittent/irregular manner.

Features
- Compatible energy harvesting sources:
  - PZT, piezo electric fibre composite
  - Solar photo voltaic cells
  - Thermoelectric generators
- Compatible with most wireless sensor networks (WSN)
- Self-Contained onboard energy source
- No calibration or setup required
- CMOS logic compatible

Energy Measurement

MICROCHIP

These energy measurement ICs support the IEC 62053 international energy metering specification. The 16-Bit ADCs enable small shunt meter designs for measuring a wide range of Ib and Imax currents.

- 16-bit delta-sigma ADCs
- On-chip voltage reference temp drift 15ppm/°C

The output of both these devices include a frequency proportional to the average active (real) power at the inputs as well as:

- **MCP3905A/6A** - Higher frequency output proportional to the instantaneous power for meter calibration. On-board fixed-function DSP for active (real) power calculation.
- **MCP3909** - Simultaneous SPI interface, with 16-bit ADC output and 20-bit multiplier output data at up to 14 kHz

Energy Metering

ANALOG DEVICES

Surpass **IEC62053-21** standard accuracy requirements.

The **ADE7752B** and **ADE7762** are polyphase ICs that provide watt-hour information using pulse outputs that can directly drive a stepper motor counter. They're optimized for 3-phase, 3-wire applications with no-load threshold and REVP indication based on the sum of the phases. To ensure that energy is billed properly under miswiring or tampering conditions, they can be set to accumulate based on the sum of the absolute value in each phase. The active power accumulation is signed by default.

The **ADE7762** has four additional logic output pins. These four pins drive six LEDs for prioritized indication of phase dropout and phase sequence error as well as reverse polarity per phase.

The **ADE7761A** detects two common tampering conditions: fault" condition (when loads are grounded to earth instead of connected to neutral wire or when the meter is bypassed with external wires) and missing neutral" condition (when the voltage input and return current are missing). It iincorporates a novel tampering detection scheme which indicates the fault or missing neutral conditions and allows the meter to continue accurate billing by continuous monitoring of the phase and neutral (return) currents. It also includes a power-supply monitoring circuit which ensures that the voltage and current channels are matched, eliminating creep effects in the meter.

Power Measurement

ANALOG DEVICES

- Meet accuracy spec for **IEC**, **ANSI** and **JIS**.
- Energy data linearity: +0.1% of reading over 1000:1 dynamic range
- Instantaneous Voltage, Current and Power IRMS and VRMS, Active, Reactive and Apparent Power
- Energy-to-pulse conversion
- Temperature sensor
- On-chip 2.5 V reference (25 ppm/°C typ)
- Simple 3-wire digital serial interface

FRAM Event Data Recorder

RAMTRON

New

This event data recorder with FRAM provides an integrated solution for digital events monitoring. It provides simple device settings and data retrieval allowing easy system integration.

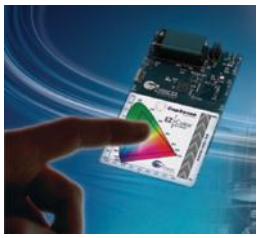
USB-DAQ™

Driver-Free USB Data Logger

New

USB-DAQ is a low cost data logging system. In normal operation it is powered by a battery cell and logs data as required. It has analogue, digital, comparator and counter inputs.
When plugged into a USB port, USB-DAQ appears on the PC like a removable disk. The user can specify data logging requirements in a text file, and access logged data from a CSV file. No software or firmware programming is required. If the battery cell is rechargeable, it can be recharged while plugged in.
USB-DAQ uses the Mass Storage Device (MSD) USB profile. It does not require USB driver installation, and so is immediately compatible with present and futureWindows, Linux and Mac operating systems.



Features:

- Two chip solution (microcontroller + memory)
- True MSD plug and play - No drivers required
- USB 2.0 compatible
- 32kHz real time clock
- 10-bit, up to 14-channel analog-to-digital with internal 1.2V fixed voltage reference channel
- Dual analog comparators
- Counter input
- Digital inputs

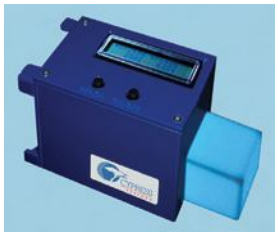
CY3269N Lighting Starter Demonstration Kit



New

The CY3269N Lighting Starter Demonstration Kit showcases the: EZ-Color and CapSense, which enable tunable white light control, color mixing, and capacitive touch sensing. At the simple touch of a finger, users can illuminate anything from an entire room to a large architectural lighting display with warm, neutral, or cool white light of variable color temperature. Users can create rich and vibrant colored light to set moods, accents, and customize the overall feel of any venue with little effort.

CY33265x RGB Evaluation Kits

New

The CY3265x-RGB evaluation board demonstrates the ability of the EZ-Color device to use real-time temperature feedback to control three primary, high brightness LEDs and create accurate, mixed-color output. The three LEDs on the CY3265O-RGB evaluation board use the primary colors red, green, and blue, although any color LEDs can be used in a design, depending upon the application and the desired color gamut.

The CY3265x-RGB evaluation kits are available with the following LEDs:

- Nichia Power LEDs - **CY3265N-RGB**
- OSRAM DRAGON LEDs - C**Y3265O-RGB**
- Cree XLamp LEDs - **CY3265C-RGB**

Rotary and Linear Encoders

SMD

austriamicrosystems

New

The **AS5030** is a contactless magnetic rotary encoder for accurate angular measurement over a full turn of 360°. It is a system-on-chip, combining integrated Hall elements, analog front end and digital signal processing in a single device.
The **AS5035** is a contactless magnetic incremental encoder with 64 quadrature pulses per revolution (8-bit resolution) and index output. Only a simple two-pole magnet, rotating over the center of the chip is required. The magnet may be placed above or below the IC.
The **AS5040** is a system-on-chip, combining integrated Hall elements, analog front end and digital signal processing in a single device. It provides incremental output signals and the absolute angular position of a magnet that is placed above or below the device.
The **AS5045** is a contactless magnetic rotary encoder for accurate angular measurement over a full turn of 360°. It is a system-on-chip, combining integrated Hall elements, analog front end and digital signal processing in a single device.
The **AS5130** is a contactless magnetic rotary encoder for accurate angular measurement over a full turn of 360°. It is a system-on-chip, combining integrated Hall elements, analog front end and digital signal processing in a single device.
The **AS5134** is a contactless magnetic rotary encoder for accurate angular measurement over a full turn of 360°. It is a system-on-chip, combining integrated Hall elements, analog front end and digital signal processing in a single device.
The **AS5140H** is a contactless magnetic rotary encoder for accurate angular measurement over a full turn of 360° and over an extended ambient temperature range.
The **AS5304** & **AS5306** are single-chip ICs with integrated Hall elements for measuring linear or rotary motion using multi-pole magnetic strips or rings.

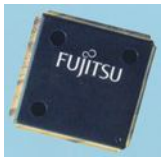
Impedance Converter, Network Analyzer

ANALOG DEVICES



The AD5933 is a high precision impedance converter system solution which combines an on-board frequency generator with a 12-bit, 1 MSPS, analog-to-digital converter (ADC). The frequency generator allows an external complex impedance to be excited with a known frequency. The response signal from the impedance is sampled by the on-board ADC and a discrete Fourier transform (DFT) is processed by an on-board DSP engine. The DFT algorithm returns a real (R) and imaginary (I) data-word at each output frequency.

MB86/87 Graphic Device Controllers

FUJITSU

MB87P2040A (Jasmine) is a 2D graphics acceleration chip incorporating 8Mbit of embedded SDRAM, eliminating the need for external memory devices. The device is optimized to work as a companion chip for Fujitsu's 32-Bit MB91F36x family RISC devices.
It has a number of features which give a designer more flexibility in their application area:
The video input interface was developed to allow the input of several formats (including YUV) and is compatible to a wide range of video decoder chips. A programmable converter matrix (YUV to RGB) allows an application to write YUV format data directly to layers and to convert the data back to RGB for scanning.
In addition, a gamma correction table allows a system designer to adjust the picture characteristics according to the requirements of the display connected in conjunction with an extended color look-up table which can hold up to 512 entries.

- CMOS 0.25μm technology
- Flexible display controller for almost all standard LCD panels
- 4 layers of overlay display (out of 16 logical layers)
- RGB analog output (DAC)
- RGB digital output
- Includes 2D graphic acceleration functions
- Gamma correction
- Embedded SDRAM graphic memory 8Mbit (1MByte)
- Digital video input (RGB and YUV formats)
- CPU interface for FR series
- Supply voltage 3.3V (I/O), 2.5V (Internal)

MB86276 (Lime) is a new extension to Fujitsu's graphics controller device family for 2D applications.
One of its unique features is its dual display mode capability. The device can simultaneously drive two individual displays that are connected. This functionality makes it possible to duplicate contents (such as a video picture) but also to have two individual pictures on two displays.
The external video input accepts data that is compliant to the following standards: RBT-ITU656, RBT-ITU601 and RGB666.

- CMOS 0.18μm technology
- Display resolutions up to 1280x768
- Alpha Plane
- Video Scaler (up/down scaling)
- I2C interface
- RGB digital output (8bit x 3)
- Built-in alpha blending, anti-aliasing and chroma-keying
- External 32-bit 133MHz SDRAM/FCRAM interface for up to 64MB graphic memory
- Host interface 32/16 bit
- GPIO inputs/outputs
- Serial interface
- Supply voltage 3.3V (I/O), 1.8V (Internal)
- Temperature range -40 to +85 °C

Graphics Controllers

FUJITSU

New

The **MB86277** 'Mint' is a solid option for various types of low-end 2D graphic applications in the industrial market segment. It operates internally at 100 MHz and has a 32-bit MCU interface and a 64/32-bit SDRAM memory interface. The video input unit is capable of accepting TV tuner, DVD player or camera signals in PAL or NTSC video formats (ITU656 format). Interlaced video pictures with various resolutions and frame frequency rates can be grabbed, scaled down and displayed picture-in-picture.

MINT Features:

- CMOS 0.18 μm technology
- Internal and memory clock frequency: 100 MHz (generated by on-chip PLL)
- Base clock for display clock: 400.9 MHz (generated by on-chip PLL)
- Power consumption < 1.0 W (estimated)
- Display resolutions typically from 320 x 240 up to 1280 x 768
- 6 layers of overlay display (windows)
- Alpha plane and constant alpha value for each layer
- RGB888 and RGB analog display output
- Digital video input (ITU656)
- Video input downscaling
- Rendering engine for 2D graphic acceleration functions
- Geometry processor supporting floating point transformations
- Texture mapping unit (up to 4096 x 4096)
- Bit BLT Unit for transfers up to 4096 x 4096 surfaces
- Alpha Bit BLT and ROP2 functions
- External 64/32 bit SDRAM interface (100MHz) for graphic memory (up to 64Mbytes)
- Parallel host interface (FR, SH3, SH4, V850, SparcLite etc.)
- Internal and external DMA support
- I2C interface
- Temperature range -40 to +85 °C

KIT3109MMA6270QE

KIT3109MMA7260QE

KIT3109MMA7261QE

KIT3109MMA6280QE

New

The g-Select multi-axis low g acceleration sensors have selectable sensitivity of 1.5g, 2g, 2.5g, 3.3g, 4g, 6g, 6.7g and 10g. These g-Select accelerometers can be used for a variety of multifunctional applications for the sensing functions of fall, tilt, motion, positioning, shock and vibration. The KIT3109MMAx2x0Q evaluation boards can interface to a 3.3 volt power source or battery. They are intended to be used for evaluating the MMA7260Q, MMA7261Q, MMA6270Q and MMA6280Q and developing prototypes quickly without requiring a PCB to be designed to accommodate for the small profile QFN package.

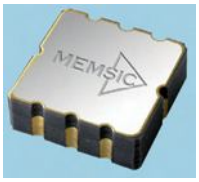
Accelerometer ICs & Demo Board



The MMA series are low power, low profile SMD capacitive micromachined accelerometer featuring signal conditioning. With low pass filter, temperature compensation and self test. Also a 0g-detect which detects linear freefall, when any of the axis are at 0g. Zero-g offset and sensitivity are factory set and require no external devices. Some of the MM series includes a sleep mode that makes it ideal for handheld battery powered electronics. The ZSTAR2 small portable demo board has the capability to demonstrate and evaluate various accelerometer applications that accommodate the low-cost low-power wireless connection. The sensor board includes two PCB 2.4 GHz antennas, CR2032 lithium battery holder and the three pushbuttons. The board size is 56 mm x 27 mm, which has a 14-pin LGA analog output triple axis accelerometer. The sensitivity is 800mV/g and a g-select range of 1.5g to 6g. There is a sleep mode for power cycling options. The MA7360L accelerometer has a lower current consumption at 400µA in normal mode and 3µA in sleep mode. The internal 32kΩ resistor on the MMA7360L has been shunted out and an external 10kΩ resistor has been added with a 320nF capacitor to complete a 50Hz low pass filter on the X, Y and Z outputs.
The ADIS16XXX are dual axis sensors, which can detect acceleration and inclination.

ZSTAR2 Demo Board

BU Series Accelerometers

The BU Series piezo-ceramic accelerometer has an output from 20 Hz to above 10 kHz. It is used primarily as a contact microphone for high noise environments, it can also be used as an accelerometer with lightweight structures.

Features:
- High vibration sensitivity
- Integral FET amplifier
- High resistance to mechanical shock
- Quiescent Current Drain (@ Vs=1.3VDC)
- Output Impedance @ 1kHz: 4.4k (nominal)
- Small size (7.92mm x 5.59mm x 4.14mm)

Sensitivity in dB Relative to 1.0V/g

FXL series are designed to translate up or down, for logic in the range of 1.0 V to 3.3 V. Utilizing space and power conserving technologies, these are ideal for use in ultra portables such as cell phones and digital cameras.

Analogue Front Ends for Imaging Applications

ANALOG DEVICES

The AD98xx/99xx series are complete analogue signal processors for digital still cameras and other CCD imaging applications.

The internal registers are programmed through a 3-wire serial digital interface. Programmable features include gain adjustment, black level adjustment, input configuration, and power-down modes.

The 99xx parts have an integrated timing generator.

Dynamics Processor

THAT Corporation

Combines in a single IC all the active circuitry needed to construct a wide range of dynamics processors. The 4301 includes a high-performance, exponentially-controlled Blackmer® VCA, a log-responding RMS-level sensor and three general-purpose opamps.

The Blackmer VCA provides two opposing- polarity, voltage- sensitive control ports. Dynamic range exceeds 115 dB, and THD is typically 0.003% at 0 dB gain.
The RMS detector provides accurate rms-to-dc conversion over an 80 dB dynamic range for signals with crest factors up to 10. One opamp is dedicated as a current-to-voltage converter for the VCA, while the other two may be used for the signal path or control voltage processing.

The combination of exponential VCA gain control and logarithmic detector response - "decibel-linear" response - simplifies the mathematics of designing the control paths of dynamics processors. This makes it easy to design audio compressors, limiters, gates, expanders, de-essers, duckers, noise reduction systems and the like. The high level of integration ensures excellent temperature tracking between the VCA and the detector, while minimizing the external parts count.

596	ADI	10	TO-100	Thermocouple Conditioner and Setpoint Controller for Type J Thermocouple 10 mV/°C	AD596AHZ	143-8951●	11.640	8.930	7.570	– –	– –
597	ADI	10	TO-100	Thermocouple Conditioner and Setpoint Controller for Type KThermocouple 10 mV/°C	AD597AHZ	143-8952●	11.640	8.930	7.570	– –	– –
597	ADI	8	SOIC	Thermocouple Conditioner and Setpoint Controller Operates with Type K Thermocouple 10 mV/°C	AD597ARZ	SMC 143-8419●	5.180	3.530	2.850	– –	– –
693	ADI	20	DIP	Loop-Powered 4mA to 20mA Sensor Transmitter (Cerdip)	AD693AQ	409-212▲	14.220	10.910	9.250	– –	– –
694	ADI	16	DIP	4mA to 20mA Transmitter	AD694AQ	633-136▲	12.400	9.880	8.360	– –	– –
694	ADI	16	SOIC	4mA to 20mA Transmitter (IND TEMP)	AD694ARZ	SMC 960-5460●	8.950	6.870	5.820	– –	– –
694	ADI	16	DIP	4mA to 20mA Transmitter	AD694JNZ	960-3670●	9.720	7.460	6.330	– –	– –
1020	ROHM	5	HVSOF	Analogue Output Temperature Sensor ±2.0°C	BD1020HFV-TR	NEW SMC 160-3635●	0.270	0.210	0.175	0.151	0.140
1025	LT	8	DIP	MicroPower Thermocouple Cold Junction Compensator	LT1025CN#PBF	955-9442●	4.400	3.300	2.500	– –	– –
1046	MCHIP	3	SOT-23B	Linear output Temperature-to- Voltage Converter. (-40°C to +125°C).	TC1046VNBTR	SMC 121-2685●	0.530	0.370	0.310	– –	– –
1046	MCHIP	3	SOT-23B	Linear output Temperature-to- Voltage Converter. (-40°C to +125°C).	TC1046VNBTR.	SMC 396-8923	0.310	0.220	0.184	– –	– –
1047	MCHIP	3	SOT-23B	Precision Linear Temperature to VoltageConverter	TC1047VNBTR	NEW SMC 155-7425●	0.610	0.460	0.360	– –	– –
1047	MCHIP	3	SOT-23B	Linear output Temperature-to-Voltage Converter. (-40°C to +125°C).	TC1047AVNBTR	SMC 976-2531●	0.560	0.390	0.330	– –	– –
1617	MAX	16	QSOP	Remote or local Temperature Sensor With 2-wire serial Interface, ±3°C Remote accuracy. (QSSOP)	MAX1617MEE+	SMC 972-4109●	9.020	5.800	3.910	– –	– –
1620	MAX	8	DIP	Digital Thermometer and Thermostat	DS1620+	118-7998●	6.210	3.990	2.450	– –	– –
1620	MAX	8	SOIC	Digital Thermometer and Thermostat	DS1620S+	SMC 972-6276●	6.210	3.990	2.690	– –	– –
1621	MAX	8	DIP	Digital Thermometer and Thermostat With 2-wire serial CPU controlled interface.	DS1621+	118-8024●	4.100	2.640	1.520	– –	– –
1621	MAX	8	SOIC	Digital Thermometer and Thermostat With 2-wire serial CPU controlled interface.	DS1621S+	SMC 972-5261●	4.100	2.640	2.210	– –	– –
1624	MAX	8	SOIC	Digital Thermometer With 256bytes of EEprom providing 13-Bit temperature reading, 2-wire interface	DS1624S+	SMC 972-5270●	8.060	5.180	2.970	– –	– –
1626	MAX	8	SOIC	3-Wire Digital Thermometer/Thermostat with EEPROM	DS1626S+	NEW SMC 156-9965●	2.690	2.400	1.960	1.660	1.530
1629	MAX	8	SOIC	Digital Thermometer and Real-time Clock With Thermostatic and time alarms, 2-wire serial interface ±2°C acc. (-55°C to +125°C).	DS1629S+	SMC 972-4745●	6.670	4.450	2.630	– –	– –
1726	MAX	8	microSOIC	3-Wire Digital Thermometer/Thermostat with EEPROM	DS1726U+	NEW SMC 156-9966●	2.610	2.310	1.880	1.610	1.490
1721	MAX	8	SOIC	2-Wire Digital Thermometer and Thermostat	DS1721S+	SMC 972-3862●	3.880	2.920	2.350	– –	– –
1722	MAX	8	SOIC	Digital Thermometer With 3-wire SPI interface, ±2°C acc. (-55°C to +120°C).	DS1722S+	SMC 972-4753●	2.320	1.490	0.860	– –	– –
1821	MAX	8	SOIC	Programmable NV Digital Thermostat or 8Bit Thermometer with a 1-Wire Digital Interface	DS1821S+	NEW SMC 160-6609●	4.240	3.390	3.090	2.830	2.360
1821	MAX	3	TO-92	Programmable Digital Thermostat	DS1821+	972-6330●	5.620	3.610	2.070	– –	– –
1859	MAX	16	TSSOP	Dual Linear Temperature-Controlled NV 50kΩ 256 Positions Resistors & 3 Analogue I/P Monitors	DS1859E-050+	NEW SMC 160-6611●	4.030	3.230	2.930	2.690	2.250
3100	TI	48	LQFP	CCD/CIS Signal Processor, 14-Bit	VSP3100YG4	SMC 120-7255●	6.190	5.160	4.790	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 45°C	TC6501P045VCTTR	SMC 143-9491●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 55°C	TC6501P055VCTTR	SMC 143-9493●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 65°C	TC6501P065VCTTR	SMC 143-9494●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 75°C	TC6501P075VCTTR	SMC 143-9495●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 85°C	TC6501P085VCTTR	SMC 143-9496●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 105°C	TC6501P105VCTTR	SMC 143-9497●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 115°C	TC6501P115VCTTR	SMC 143-9498●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 120°C	TC6501P120VCTTR	SMC 143-9499●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 125°C	TC6501P125VCTRT	SMC 143-9500●	0.540	0.380	0.310	– –	– –
6501	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, Open Drain, Active Low 125°C	TC6501P125VCTTR	SMC 143-9501●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 45°C.	TC6502P045VCTTR	SMC 143-9502●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 55°C.	TC6502P055VCTTR	SMC 143-9503●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 65°C.	TC6502P065VCTTR	SMC 143-9504●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 75°C.	TC6502P075VCTTR	SMC 143-9505●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 85°C.	TC6502P085VCTTR	SMC 143-9506●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 95°C.	TC6502P095VCTTR	SMC 143-9507●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 105°C.	TC6502P105VCTTR	SMC 143-9508●	0.540	0.380	0.310	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 115°C.	TC6502P115VCTTR	SMC 143-9511●	0.640	0.450	0.360	– –	– –
6502	MCHIP	5	SOT-23A	Temperature Switch with Pin Selectable Hysteresis, CMOS, Active High 125°C.	TC6502P125VCTTR	SMC 143-9512●	0.540	0.380	0.310	– –	– –
6610	MAX	6	SOT-23	Analogue Temperature Sensors with 2.560V Reference O/P	MAX6610AUT+T	NEW SMC 156-9959●	3.300	2.930	2.400	2.040	1.880
6612	MAX	5	SC70	1.2°C Accuracy AnalogueTemperature Sensor	MAX6612MXK+	NEW SMC 156-9962●	3.300	2.930	2.400	2.040	1.880
6613	MAX	5	SC70	1.3°C Accuracy AnalogueTemperature Sensor	MAX6613MXK+T	NEW 156-9961●	3.300	2.930	2.400	2.040	1.880
6648	MAX	8	UMAX	Remote/Local Temperature Sensors with Overtemperature Alarm	MAX6648MUA+	NEW SMC 167-3135●	3.480	2.490	1.940	1.740	1.590
6673	MAX	5	SC70	1.4kHz PWM Output Temperature Sensor.	MAX6673AXK+T	NEW SMC 156-9964●	5.650	5.010	4.110	3.470	3.230
6676	MAX	6	SOT-23	1.5°C Accuracy 1.8kHz PWM O/P Temperature Sensor	MAX6676AUT3+T	NEW SMC 156-9963●	5.650	5.010	4.110	3.470	3.230
6689	MAX	20	TSSOP	7-Channel Precision Temperature Monitor, Supports SMBus™ Protocols	MAX6689UP9A+	SMC 143-3254●	5.530	4.430	3.390	3.340	3.230
6692	MAX	8	UMAX	Remote/Local Temperature Sensors with Overtemperature Alarm	MAX6692MUA+	NEW SMC 167-3136●	3.480	2.490	1.940	1.740	1.590
6699	MAX	16	TSSOP	5-Channel Precision Temperature Monitor, Supports SMBus™ Protocols, Slave ID: 0011 010	MAX6699UE34+	SMC 143-3255●	6.910	5.540	4.240	4.180	4.030
6699	MAX	16	TSSOP	5-Channel Precision Temperature Monitor, Supports SMBus™ Protocols, Slave ID: 0011 100	MAX6699UE38+	SMC 143-3256●	6.260	5.010	3.850	3.780	3.650
7301	ADI	8	MSOP	MicroPower Digital Temperature Sensor.	ADT7301ARMZ	SMC 111-7856●	2.790	1.910	1.420	1.350	1.260
7302	ADI	8	MSOP	Remote ThermAl Controller and Voltage Monitor	ADT7302ARMZ	SMC 111-7855●	1.810	1.230	0.880	0.820	0.760
7314	ADI	8	MSOP	10-Bit Low Voltage, Digital Temp. Sensor	AD7314ARMZ	SMC 942-6345●	1.110	0.920	0.800	– –	– –
7414	ADI	6	SOT-23	SMBus/I2C Digital Temperature Sensor with SMBus Alert and Over Temperature Pin	AD7414ARTZ-0500RL7.	NEW SMC 165-1313●	1.670	1.300	1.060	0.980	0.930
7415	ADI	5	SOT-23	Digital Output Temperature Sensor	AD7415ARTZ-0500RL7.	NEW SMC 165-1312●	1.670	1.300	1.060	0.980	0.930
7416	ADI	8	SOIC	Temp. Sensor With I²C interface, 10-Bit ADC and Over Temperature Indicator, acc. ±2°C @ 25°C, -55°C to +125°C ext. temp. (Enhanced LM75)	AD7416ARZ	SMC 942-5560●	2.250	1.680	1.140	– –	– –
7417	ADI	16	SOIC	4-channel Temp. Sensor With I²C interface, 10-Bit ADC and Over Temperature Indicator, acc. ±2°C @ 25°C, -55°C to +125°C ext. temp.	AD7417ARZ	SMC 107-9321●	6.210	4.260	3.440	– –	– –
7418	ADI	8	SOIC	Temp. Sensor With I²C interface, 10-Bit ADC, Single Input channel, Reference Input and Over Temperature Indicator, acc. ±2°C @ 25°C, -55°C to +125°C ext. temp	AD7418ARZ	SMC 960-3832●	5.280	3.590	2.900	– –	– –
7470	ADI	16	QSOP	Temperature Sensor Hub and Fan Controller.	ADT7470ARQZ	SMC 111-7852●	5.000	3.430	2.550	2.420	2.260
7505	MAX	8	SOIC	High-Precision Digital Thermometer and Thermostat	DS7505S+	NEW SMC 167-3131●	3.280	2.350	1.830	1.640	1.490
7516	ADI	16	QSOP	SPI/I2C Compatible,Temperature Sensor, 4-Channel ADC and Quad Voltage Output DAC	ADT7516ARQZ	SMC 143-8683●	13.150	10.160	8.610	– –	– –
7519	ADI	16	QSOP	SPI/I2C Compatible, Temperature Sensor, 4-Channel ADC and Quad Voltage Output DAC	ADT7519ARQZ	SMC 111-7846●	7.280	4.990	4.030	3.880	3.620
7814	ADI	6	SOT-23	10Bit Temperature Sensor	AD7814ARTZ-500RL7	NEW SMC 165-1314●	1.640	1.280	1.030	0.950	0.910
9700	MCHIP	3	SOT-23	Linear Temperature Sensor with 10.0mV/°C O/P	MCP9700AT-E/TT	NEW SMC 160-5577●	0.300	0.230	0.181	– –	– –
9700	MCHIP	5	SC-70	Thermistor, Linear 10Mv/C	MCP9700AT-E/LT	SMC 133-2165●	0.240	0.196	0.127	– –	– –
9700	MCHIP	3	TO-92	Thermistor, Linear 10Mv/C	MCP9700-E/TO	133-2166●	0.220	0.127	0.110	– –	– –

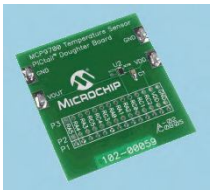
Digital Temperature Sensors

SMARTEC

The Smartec sensors represent a significant development in transducer technology. Having a single wire digital output and being fully calibrated during manufacture means it can be directly connected to processor circuitry without A/D conversion circuitry.

The sensor is a three terminal device with integrated sensor circuitry. A duty cycle modulated square wave is available from one terminal, the other two being power input and ground. At the heart of the product is a bipolar temperature sensor with precision circuitry calibrated during manufacture.

210619



Features:-

- Range of package styles
- Operating temperature -45°C to +130°C
- TTL/CMOS compatible
- 200µ A supply current
- Absolute accuracy ±0.7 ²C
- Linear output within 0.2 ²C
- 200µ A supply current

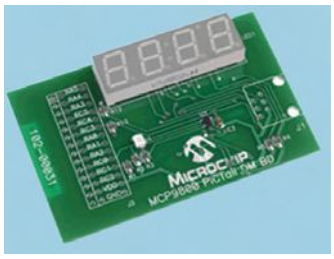
MCP9700 Linear Active Thermistor

MICROCHIP

Linear Active Thermistor™ ICs are sensors whose output voltage is directly proportional to measured temperature. The output of the MCP9700 is calibrated to a slope of 10mV/°C and has a DC offset of 500mV. The offset allows reading negative temperatures without the need for a negative supply. A PICtail Demonstration board is also available, which illustrates how to interface the MCP9700 thermistor IC to a microcontroller.

Features:



- Linear Temperature Slope, Optimised for ADCs
  - **-MCP700**: 10mV/°C(typ.)
  - **-MCP701**: 19.5mV/°C(typ.)
- ±4°C Accuracy from 0°C to +70°C
- -4°C/+6°C Accuracy from -40°C to +125°C
- Very low Operating Current: 12µA (max)
- Wide Operating Voltage Range
  - **-MCP700**: Vdd = 2.5 to 5.5V
  - **-MCP701**: Vdd = 3.1 to 5.5V

MCP9800 Temperature Sensor PICtail Demo Board

MICROCHIP

The MCP9800 Thermal Sensor PICtail™ Demo Board demonstrates how to interface the MCP9800 to a PICmicro microcontroller using the PICkit™ 1 Flash Starter Kit as a platform.
The MCP9800 Thermal Sensor PICtail Demo Board can also be used as a stand-alone module to quickly add thermal sensing capability to any existing application. This basic sensor functionality is implemented on a small Printed Circuit Board (PCB) and an interface via a standard 100 mil header.

Features:

- Standard 100 mil 14-pin header (J2) for easy interface to PICkit ™1 Flash Starter Kit or custom application
- 7-segment LED display to display temperature in °C or °F
- Temperature Alert indicating LED

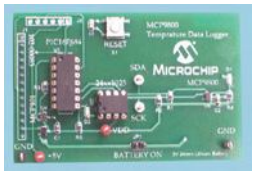
Serial Digital Thermal Sensor

MICROCHIP

The TC74 is a serially accessible, digital temperature sensor. Temperature data is converted from the onboard thermal sensing element and madeavailable as an 8-bit digital word. Communication with the TC74 is accomplished via a 2-wire SMBus/I2C compatible serial port. Temperature resolution is 1°C. Conversion rate is a nominal 8 samples/sec.



Pins/Pkg	5/SOT-23A	Supply Voltage	2.7 to 5.5V

MCP9800 Temperature Data Logger Demo Board

MICROCHIP

The MCP9800 Temperature Data Logger Demo Board demonstrates how to use the MCP9800 and features an on-board EEPROM to log temperature data. It allows users to store up to 128000 temperature readings from the MCP9800 sensor to the 24LC1025, Microchip's 1024Kbit EEPROM.
The MCP9800 Temperature Data Logger Demo Board can be powered using an external supply, the PICkit™ 1 Flash Starter Kit, or a 24 mm Lithium Battery. The battery allows for stand-alone operations.

Features:

- MCP9800 Sensor with 0.0625°C/LSb resolution and 128Kbyte EEPROM
- Standard 100 mil 14-pin header (P1) for easy interface to PICkit1™ Flash Starter Kit or custom application
- PIC16F6784 PICmicro® Microcontroller
- Temperature Alert indicating LED and measurement indicating LED

RL Re-reeling available

TC77 Thermal Sensor PICtail Demo Board

The TC77 Thermal Sensor PICtail Demo Board demonstrates how to interface the TC77 Thermal Sensor device to a microcontroller. This board can connect directly to the PICkit 1 Flash Starter Kit, providing a platform for code development and evaluation. The system designer will be able to use this design as an example of how to integrate a digital temperature sensor in their system.

Features:
- Available F/W routine transmits TC77 temperature data via SPI serial bus to a PIC microcontroller
- Performs conversions to °F and °C
- Standard 100-mill header for easy interface to PICkit 1 Flash Starter Kit or custom application
- Small PCB layout

TSic LABkit™ - Temparature Sensor Evaluation Dev Kit

The TSic LABkit™ is a "plug&play" tool designed for evaluating the TSic™ family of temperature sensor ICs. The TSic LABkit™ offers efficient development for fast temperature sensing applications. Its software allows simultaneous display of up to four temperature signals in real time with data recording (minimum, maximum, and average) in a text file that can be imported by other applications such as Excel®.

Features:
- High precision temperature measurement with up to four sensors in parallel per TSic LABkit™ (TSic™ 306 e-line package) .
- User-friendly software for temperature data display, customer-specific sensor configura-tions, measurement interval selection, and data recording
- Simple connections - the TSic LABkit™ in-terfaces with your PC via a USB cable and can measure application-specific tempera-ture data from up to four TSic™ 306 e-line precision sensors wired to the TSic LABkit™
- Fast application development for TSic™ family sensors
- Compatible with your own sensor package wired to the TSic LABkit™ without time-consuming hardware or software development
- Expedites evaluation and comparison of different models of the TSic™ sensors

Contents:
- TSic LABkit™ USB Adapter for up to four temperature sensors - includes USB cable-Four TSic™ 306 e-line sensor ICs (accuracy: +/- 0.3°C) with 1m (3 ft.) cableLABkit™ Recorder data acquisition, display and recording software for PC/Windows®.Technical Documentation

Sensor Signal Conditioner Kits

The ZMD Sensor Signal Conditioner Kits provide support for newcomers and experienced users in evaluating ZMD Sensor Signal Conditioner ICs (SSCs). Self-explaining graphical user interfaces allow to control the following functions:

- IC configuration including adjustment of gain-factor, zero-point-shift, temperature compensation reference, signal resolution, sample rate, output options, measurement regime, clamp limits, etc.
- Reading and programming of EEPROM and CMC (calibration micro controller) registers
- Display of the unconditioned and of the conditioned bridge sensor and temperature sensor signals
- Simulation of a real bridge sensor element by a Sensor Dummy (real sensor alternatively connectable)
- Experimental semi-automatic calibration covering measurements, calibration coefficients calculation and EEPROM programming
- All kits include an USB cable, 5 IC samples, a SSC Test Board and a CD-ROM containing software and documentation.

Low-Noise Matched Transistor Array

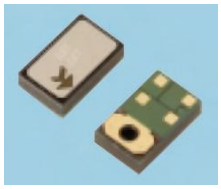
THAT Corporation

14 pin SO

14 pin DIP

The THAT 300 series are large-geometry, 4-transistor, monolithic NPN and/or PNP arrays. The 300 series are suited for low-noise amplifier input stages with typical base-spreading resistances of 25 ohms for the PNP devices (30 ohms for the NPNs) and low voltage noise of under 1 nV/Hz½.

Fabricated in a dielectrically isolated, complementary bipolar process, each transistor is electrically insulated from the others by a layer of insulating oxide (and not the reverse-biased PN junctions used in conventional arrays) and exhibit inter-device crosstalk and DC isolation similar to that expected from discrete transistors. The resulting low collector-to-substrate capacitance produces a typical NPN fT of 350MHz (325 MHz for the PNPs). Substrate biasing is not required for normal operation, though the substrate should be grounded to optimize speed and minimize crosstalk.



467602

Video/Audio ICs

Zero-Height™ Silicon Microphone

KNOWLES ACOUSTICS

The Zero-Height™ silicon microphone is an expansion of the SiSonic™ product line. This was the worlds first range of surface mounted silicon microphones. The zero-height device now allows the microphone to be mounted under the PCB and therefore achieves virtual 'zero-height'. This devices is particularly suitable for mobile phones or other products where there is very little room to one side of the PCB. The Zero-Height device also has a solder connection between the PCB and the microphone, giving an acoustic seal around the port hole. This means a reduction in design cost, due to the simplicity of the mechanical and acoustic design.

The image below shows how the Zero-Height SMD microphone fits onto the PCB. The Standard Mount figure shows a standard top-mounting configuration. The Zero Height figure shows the microphone mounted on the opposite side of the board and ported through the PCB, meaning if will fit into a much more compact space.

Features:

- Total harmonic distortion of less than 1% at 100 dB SPL
- Nominal sensitivity of -42dB at 1kHz
- Supply voltage range of 1.5V to 5V
- Integrated EMI/RFI protection
- Rated up to 100°C

	SP0102BE3
Directivity:	Omni-directional
Frequency Range:	100Hz to 10kHz
Sensitivity:	-42 dB (0dB = 1V/Pa @ 1kHz)
Maximum Input Sound Level:	115dB SPL for 10% distortion
Supply Current (Max):	0.250mA
Supply Voltage:	1.5V to 5.5V
Electrical Connections	+ve, -ve and output
Dimensions (WxHxD):	6.15 x 1.75 x 3.75mm
Operating Temperature:	-40°C to 100°C
Storage Temperature:	-40°C to 100°C

SiSonic™ Silicon Microphone

KNOWLES ACOUSTICS

The SiSonic™ Silicon Microphone is a low-cost, high performance alternative to traditional ECMs. It is a robust microphone which yields a high degree of repeatability, stable acoustic performance, and flexibility for future design enhancements. The SiSonic Microphones incorporate a very small package size without this leading to a lack of performance or the embedding of additional components such as an integrated amplifier.

Features:

- Silicon structure gives high degree of manufacturing repeatability and acoustic performance

RL Re-reeling available

Farnell

Video/Audio ICs - continued

SiSonic™ Silicon Microphone - continued

- "Free-floating" diaphragm is immune to stress variations that impact acoustic performance
- Low mass and small diaphragm produce excellent vibration sensitivity performance
- Excellent RF and EMI suppression
- Versitile configuration and sound porting options for future microphone enhancements
- Small amount of board space required
- Low profile height
- Pick-and-place via standard automated equipment
- Ideal for Mobile Phones, Laptops, PDA's and other electronic products

Wide-Band Ultrasonic Acoustic Sensor

The Ultrasonic Acoustic Sensor is used to detect ultrasonic sound in air. It enables the ability to detect multiple frequencies within a single sensing element. Compared to conventional Ultrasonic Sensors that have a narrow frequency range, this sensor is ideal for capturing a wide frequency range.

Directivity:	Omni-directional	Supply Voltage:	1.5V to 3.6V

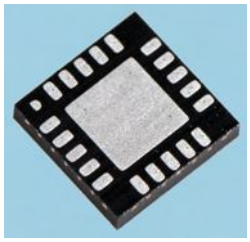
Low Noise, High Performance Audio Preamplifiers

Audio preamplifiers suitable for microphone preamp and bus summing applications.
Gain adjustable via one external resistor, making it possible to control gain over a wide range with a single-gang potentiometer.
The 1510 gain equation is identical to that of the SSM2019, reaching 6dB gain with a 10kR resistor. The 1512 reaches 0dB gain with a 10kR resistor.

Noise	1 nV/z input noise (60dB gain) 34 nV/Hz input noise (0dB gain) (1512)
THD + N (full audio bandwidth)	0.0005% ≤40dB gain 0.005% @ 60dB gain
Current	6mA typ.
Bandwidth	7MHz @ G=100
Slew Rate	19 V/µs
Output Swing	±13.3V on ±15V supplies



Pin compatible with the SSM2019 and SSM2017, and the INA217 and INA163.

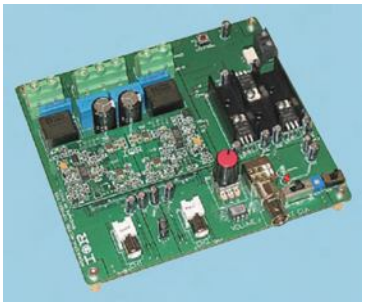
Integrated Audio Amplifiers

intersil

This family of integrated audio power amplifier have a class A BTL amplifiers in a single package. These ampliers can be used to multiplex & mix single and dual channel stereo input sources. These devices contain one class AB BTL type power amplifier for driving an 8Ω mono speaker and two class AB headphone amplifiers for driving 16Ω or 32Ω headphone speakers. Typical applications include battery powered, handheld, and portable equipment such as laptops, mobiles phones, toys and games.



- Single supply operation of 2.7V to 5.5V
- -40°C to +85°C
- Class AB Stereo BTL speaker amplifiers
- Package 20 Pin TQFN
- Low power shutdown
- Thermal shutdown protection
- Click and pop suppression circuitry
- TTL Logic-compatible

IRAUDAMP4

International IOR Rectifier

Features:

- Two channel 120W half-bridge class-D ausio power amplifier
- 120W x 2 channels (THD=1%, 1kHz)
- 52µV distortion, IHF-A weighted, AES-17 filter
- 96% efficiency @ 120W, 4Ω - single channel driven, class-D stage
- OCP, OVP, UVP, DC protection & OTP
- self-oscillating half-bridge topology with optional clock synchronisation
- featuring IRS20955S gate driver and IRF6645 DirectFET MOSFETs

Contents:

- assembled and tested demo board
- application notes
- schematic
- bill of materials
- datasheet

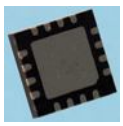
BOB-4 Video On Screen Display (OSD) Module

DECADE ENGINEERING

The Module OSD BOB-4 enables a microcontroller or a PC display text and vector graphics on standard a TV monitor. With huge user-definable character sets, BOB-4 also supports bitmap graphics and multiple languages. The module generates background video on-board, or automatically genlocks to the video source and superimposes characters over the image. Printable characters and commands control BOB-4 through a fast RS-232 style data link. Both NTSC and PAL video standards are supported.

Key Features:



- Requires DC power, serial data, and video connections
- Prints plain ASCII text in default configuration
- Display density; up to 480x240 (NTSC) or 480x288 (PAL)
- Industry-standard ANSI control protocol (ECMA-048)
- Automatic vertical scrolling
- Text crawl (single-line smooth horizontal scroll)
- Async, Synchronous, and SPI host communication options
- Automatic video mode control (local/genlock)
- 5 software-controlled digital outputs
- Consumes 500 mW @ +5VDC
- Firmware can be upgraded in the field

Precision Micropower Voltage References

The LM4040 is a family of bandgap circuits designed to achieve precision micro-power voltage references of 2.5V and 5.0V. Excellent performance is maintained over the 60µA to 15mA operating current range.
The LM4041 is a bandgap circuit designed to achieve a precision micro-power voltage reference of 1.225 V. Excellent performance is maintained over the 60µA to 12mA operating current range.

Adjustable Precision Zener Shunt Regulators

These devices are all three terminal adjustable shunt regulators. They offer excellent temperature stability and output current handling capability up to 100mA. The output voltage may be set to any chosen voltage between 2.5 and 20 volts by selection of two external divider resistors. They can all be used as a replacement for zener diodes in many applications requiring an improvement in zener performance.

RL Re-reeling available

Adjustable and Fixed Output Voltage, Step-Down Switching Regulators

ON Semiconductor

These LM257x regulators are monolithic integrated circuits. The features of these devices include a guaranteed 4% tolerance on output voltage within specified input voltages and output load conditions, and ±10% on the oscillator frequency (±2% over 0 to 125°C). External shutdown is included, featuring 80 µA typical standby current. The output switch includes cycle-by-cycle current limiting, as well as thermal shutdown for full protection under fault conditions.

NCP56x Fixed and Adjustable Low Dropout Regulators

ON Semiconductor

The NCP565 series are low dropout linear regulators. They provide 1.5 A in either fixed voltage options or in an adjustable voltage version from 7.7 V down to 0.9 V.
The NCP566 low dropout linear regulator provides 1.5 A at a fixed output voltage. The fast loop response and low dropout voltage make this regulator ideal for applications where low voltage and good load transient response are important.

The NCP5662/NCP5663 is a high performance, low dropout linear regulator designed for high power applications. They also provides additional features such as Enable and Error Flag, increasing the utility of this device.

Lowdrop Voltage Regulator

HOLTEK

The HT71XX-1/HT75XX-1 series is a set of three-terminal low power high voltage regulators implemented in CMOS technology. They allow input voltages as high as 24V. They are available with several fixed output voltages ranging from 3.0V to 5.0V. CMOS technology ensures low voltage drop and low quiescent current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain variable voltages and currents.

- Low power consumption
- Low voltage drop
- Low temperature coefficient
- High input voltage (up to 24V)
- Output voltage accuracy: tolerance ± 3%

LP2966/LP2967 - Ultra Low-Dropout Regulators

The **LP2966** is a dual, ultra low-dropout regulator. Each output delivers 150mA over a full temperature range. Each LDO in the LP2966 series has independent shutdown capability.

LP2966 Features:
- Low ground pin current
- Output voltage accuracy ±1%
- Guaranteed 150mA output current at each output
- Low output noise
- Error Flags indicate status of each output

The **LP2967** is a 150 mA, dual fixed-output voltage regulator designed to provide ultra low-dropout and low noise in battery powered applications.

LP2967 Features:
- Guaranteed 150mA output current, 300 mA peak
- Stable with 2.2 µF tantalum or ceramic capacitor
- Output voltage accuracy ±1%
- Low ZOUT: 0.3 typical (10 Hz to 1 MHz)
- Over temperature/Over current protection

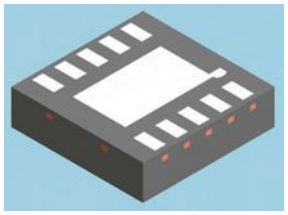
LP2995/96/97 Linear Regulator



The LP2995/96/97 linear regulator is designed to meet the JEDEC SSTL-2 and SSTL-3 specifications for termination of DDRSDRAM. The device contains a high-speed operational amplifier to provide excellent response to load transients. The output stage prevents shoot through while delivering 1.5A continuous current and transient peaks up to 3A in the application as required for DDR-SDRAM termination.

Features include:
- Low output voltage offset
- Works with +5v, +3.3v and 2.5v rails
- Low external component count
- No external resistors required
- Available in SO-8, PSOP-8 or LLP-16 packages
- Low cost and easy to use

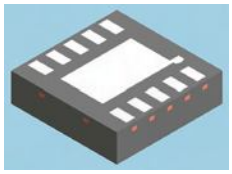
LP3996 Dual Linear Regulators



The LP3996 is a dual low dropout regulator with a power-on reset circuit. The first regulator can source 150mA, while the second is capable of sourcing 300mA and has a power-on reset function included.

Features:
- 2 LDO Outputs with Independent Enable
- 1.5% Accuracy at Room Temperature, 3% over Temperature
- Power-On-Reset Function with Adjustable Delay
- Thermal Shutdown Protection
- Stable with Ceramic Capacitors

LP5996 Dual Linear Regulators

The LP5996 is a dual low dropout regulator. The first regulator can source 150mA, while the second is capable of sourcing 300mA. It provides 1.5% accuracy requiring an ultra low quiescent current of 35µA. Separate enable pins allow each output of the LP5996 to be shut down, drawing virtually zero current.

Features:
- 2 LDO Outputs with Independent Enable
- 1.5% Accuracy at Room Temperature, 3% over Temperature
- Thermal Shutdown Protection
- Stable with Ceramic Capacitors

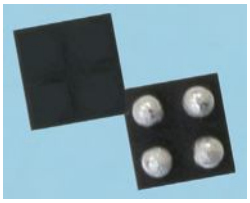
High Voltage Linear Regulators
Voltage Output 3.3V, 5.0V & Adjustable @ 100mA

MAXIM

Features

- Low 31µA Quiescent Current
- 4V to 72V Wide Input Voltage Range
- 100mA Output Current Capability
- Dropout Voltage of 620mV with 5V Output at 100mA
- Fixed Output-Voltage Options: 5V & 3.3V
- Adjustable Output Voltages from 1.8V to 11V
- Open-Drain or Push-Pull Active-Low RESET Output
- Fixed or Capacitor-Adjustable Reset Timeouts
- Small, Thermally Enhanced 1.9W, 3mm x 3mm TDFN Package
- Overtemperature and Short-Circuit Protection



The MAX677x are low-quiescent-current, high-voltage linear regulators that operate from 4V to 72V and deliver up to 100mA of load current. These low-power devices consume only 31µA of quiescent current, making them ideal for always-on automotive modules. These devices are offered with fixed standard output options of 5.0V, 3.3V, or can be adjusted from 1.8V to 11V with two external resistors. The minimum reset timeout period is offered with fixed values from 75µs to 200ms or can be adjusted externally with a small capacitor.The MAX6771/MAX6772 provide dual enable inputs (ENABLE1 and ENABLE2) to turn on and off the regulator either through an ignition switch or a bus transceiver. The MAX6773/MAX6774 feature a single traditional enable input (ENABLE) to turn on and off the regulator.

Low Dropout Voltage Regulators

TAIWAN SEMICONDUCTOR

- Fixed and adjustable voltage regulators
- Available in SM package SOT-25, TO-252 & SOT-23
- Output voltage range from 1.8V to 24V
- Output current range from 0.15A to 1.5A
- Low dropout voltage & high tolerance output

XC6206 Series Voltage Regulators

TOREX SEMICONDUCTOR LTD.

The XC6206 series are highly precise, low power consumption, high voltage, positive voltage regulators manufactured using CMOS and laser trimming technologies. The series provides large currents with a significantly small dropout voltage.The XC6206 consists of a current limiter circuit, a driver transistor, a precision reference voltage and an error correction circuit.

Features:
- CMOS Low Power Consumption: 1.0 µA (Typ.)
- High Accuracy: ±2%
- Built-in Current Limiter Circuit
- Low ESR Ceramic Capacitor Compatible

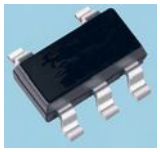
28V CMOS LDO Voltage Regulators

TOREX SEMICONDUCTOR LTD.



With a maximum input voltage of 28V, the XC6216 series is ideally suited for 24V systems and many industrial applications.
The output voltage can be fixed internally within the range of 2.0V to 12V (100mV increments), or using external resistors, outputs up to 23V can easily be set (XC6216C series).

XC6219 Series High Speed Voltage Regulators

TOREX SEMICONDUCTOR LTD.

The XC6219 series are highly accurate, low noise, CMOS LDOVoltage Regulators. Offering low output noise, high ripple rejectionratio, low dropout and very fast turn-on times, the XC6219 seriesis ideal for today's cutting edge appliances e.g. mobile phone, Cameras, Portable games e.t.c.Internally the XC6219 includes a reference voltage source, erroramplifiers, driver transistors, current limiters and phasecompensators. The XC6219's current limiters' foldback circuit alsooperates as a short protect for the output current limiter and theoutput pin.

Features:
- CMOS Low Power Consumption: 25µA (Typ.)
- High Accuracy: ±2%
- Built-in Current Limiter Circuit
- Low ESR Ceramic Capacitor Compatible
- High Ripple Rejection: 65dB (10kHz)

Fixed Voltage Regulators - continued

High Speed, Low Noise LDO Regulators

The XC6221 series are precise, low noise, high speed, low dropout regulators. The are ideal for RF applications in battery powered designs. Low Drop-Out spec and additional CE function help to maximize battery life.
These devices are specifically designed for use with ceramic output capacitors.

MCP1726 1A LDO Evaluation Board

The MCP1726 1A LDO Evaluation Board features Microchip Technology's 1A, Low Quiescent Current LDO Regulator in two circuits. The first circuit has the adjustable version of the MCP1726 in the 8-pin 3X3 DFN package. The second circuit has the adjustable version of the MCP1726 in the 8-pin SOIC package. Both circuits have potentiometers that can be used to adjust the output voltage of the LDO.

Features:
- 8-Lead SOIC and 8-Lead DFN packages for full part evaluation
- Each circuit capable of delivering 1A of continuous output current
- Adjustable output voltage via potentiometer adjustment (can also evaluate fixed output voltages)
- Shutdown, Power Good and Power Good Delay features accessible for evaluation

MCP1726EV	MCP1726 1A LDO Evaluation Board	133-2082	15.12

Fixed & Adjustable MCP16/17/18xx Voltage Regulators

This is a range of voltage regulators with output fixed from 0.8V to 5.0V with respective current output from 0.3A to 1.5A. Also adjustable regulators from 0.8V to 5.0V up to 1A. The devices have low dropout voltage, low quiescent current, overtemperature and short circuit current-limiting protection.

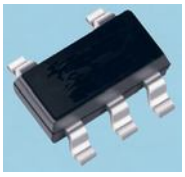
TC1016/17 LDO Linear Regulator Evaluation Board

The TC1016/17 LDO Linear Regulator Evaluation Board contains two independent LDO circuits that allow the user to evaluate the TC1016 and TC1017 devices in the 5-pin SC-70 (3.0V Output) and the 5-pin SOT-23 (1.8V Output) packages. Any of the available output voltage values of the devices (1.2V to 5.0V) can be used on this board.



Features:
- Input Voltage Range: 2.7V to 6.0V
- Additional Input and Output Capacitor Value Selection Capability via Jumpers
- Output Voltage Shutdown via the SHDN Inputs
- Overcurrent Protection (device feature)
- Overtemperature Protection (device feature)
- Line and Load Step Testing Capability

Kit includes:
- TC1016/17 LDO Evaluation Board
- TC1016/17 LDO Evaluation Board User Guide
- TC1016/17 Datasheets

Reference Design & Evaluation Boards

Evaluation Boards

If you want to evaluate ST's microcontrollers, power and analog product families for use in your new design, check out ST's selection of evaluation boards. These tested and qualified application boards are ready-to-go solutions for your application needs. For the latest selection of boards please see our website.

497081

Description	Mftrs. List No.	Order Code	Price Each 1+
Audio			
Low voltage audio power stereo amplifier based on TS4984IQT	STEVAL-CCA003V1	152-6997	28.71
Factory automation			
ARMIC30, ARM Core-based CAN Industrial Controller using STR730 MCU	STEVAL-IFN002V1	129-2068●	82.96
3 axis MEMS accelerometer demo	STEVAL-IFS001V1	129-2072●	27.25
MEMS 3-Axis - ±2g/±6g Digital Output Low Voltage Linear Accelerometer Evaluation Board based on LIS3LV02DL (EK3LV02DL)	STEVAL-MKI005V1	152-7012	38.29
MEMS 3-Axis - ±2g/±8g Digital Output Low Power Linear Accelerometer Evaluation Board based on LIS302DL (EK302DL)	STEVAL-MKI006V1	152-7013	38.29
Lighting			
Carte d'évaluation w/ OSRAM LEDs	STEVAL-ILL002V3	150-0150	49.85
Phase Control Dimmer Board based on Ultralite Micro 8 Pins	STEVAL-ILL004V2	129-2089●	27.69
High Intensity LED driver for MR-16 format based on L5973D	STEVAL-ILL007V1	129-2093●	31.94
RGB Color Control board based on STP04CM596	STEVAL-ILL009V1	152-7000	33.93
OSTAR Projection Module	STEVAL-ILL009V3	152-7001	33.93
High Intensity LED Dimming Driver based on L6902	STEVAL-ILL010V1	152-7002	25.23
Power supply and power management			
3 Phase Power Supply with ESBT (150W)	STEVAL-ISA007V1	129-2101●	73.54
VIPer53 Dual Output Off-line, wide range Power Supply , 24W Output	STEVAL-ISA013V1	129-2104●	57.20
VIPer53 Single Output Reference Board 90 to 264VAC Input, 24W Output	STEVAL-ISA009V1	152-7004	62.64

ICs in Full-Tubes & Waffle Tray Packaging

ICs in Full Tube Quantities

These devices are now available to order in full tubes, the quantity in each tube is shown below.

497272

Mftrs. List No.	Mftr.	Pins/Pkg	Description	Tube Quantity	Order Code	Price per Tube
24LC256-I/P	MCHIP	8/DIP	256K (32K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP)	90	152-3918●	46.80
24LC256-I/SM	MCHIP	8/SOIC	256K (32K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP, 207 mil)	100	NEW SMD 164-9694●	70.20
24LC256-I/SN	MCHIP	8/SOIC	256K (32K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP)	60	NEW SMD 166-0005●	54.00
24LC256-I/SM	MCHIP	8/SOIC	256K (32K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP, 207 mil)	90	NEW SMD 164-9694●	70.20
24LC512-I/P	MCHIP	8/DIP	512K (64K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP)	90	NEW 166-0008●	84.00
24LC512-I/SM	MCHIP	8/SOIC	512K (64K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP)	15	NEW SMD 166-0009●	126.00
A623308A-70SF	AMIC	28/DIP	64K (8K × 8) CMOS SRAM, 70ns acc	13	NEW 166-1744●	25.46
AD1674JNZ	ADI	28/DIP	12-BIT ADC	25	152-3878●	231.19
AD557JNZ	ADI	16/DIP	8-BIT DAC	25	152-3885●	163.06
AD558JNZ	ADI	16/DIP	8-BIT DAC	13	152-3778●	230.28
AD574AJNZ	ADI	28/DIP	12-BIT ADC	50	152-3774●	305.95
AD620ANZ	ADI	8/DIP	Low Power, Instrumentation Amp. 1 external resistor sets Gains of 1 to 1000	50	152-3782●	223.66
AD623ANZ	ADI	8/DIP	Single Supply, Rail-to-Rail Instrumentation Amp. Gain range 1 to1000, set by an external resistor	13	152-3881●	130.21
AD679JNZ	ADI	28/DIP	14-BIT ADC	50	152-3773●	463.00
AD712JNZ	ADI	8/DIP	Dual, BI-FET High Speed Operational Amp	18	152-3898●	125.39
AD7226KNZ	ADI	20/DIP	IC, 8-BIT DAC, 4-Channel	18	152-3779●	296.45
AD7248JNZ	ADI	20/DIP	12-BIT DAC	25	152-3780●	155.17
AD7524JNZ	ADI	16/DIP	8-BIT DAC, CMOS	15	152-3901●	105.20
AD7537JNZ	ADI	24/DIP	12-BIT DAC, 2-Channel	25	152-3781●	193.50
AD7705BNZ	ADI	16/DIP	16-BIT ADC, 2-Channel, Sigma Delta	15	152-3876●	145.58
AD7710ANZ	ADI	24/DIP	21-Bit SigmA-Delta Signal Conditioning ADC. Strain gauge or transducer Input, serial output, on-Board Programmable Gain Amp, Voltage Ref	15	152-3900●	330.41
AD7870JNZ	ADI	24/DIP	12-BIT ADC	13	152-3775●	367.12
AD7871JNZ	ADI	28/DIP	14-BIT ADC, Sampling	50	152-3777●	732.58
AD797ANZ	ADI	8/DIP	Ultra Low Noise, Ultra Low Distortion, Amp. - ideal for use as a Pre-Amp.	50	152-3883●	305.63
AD8307ANZ	ADI	8/DIP	DC-500MHz, 92dB DemodulatingLogarithmic Amp	50	152-3772●	362.30
AD847JNZ	ADI	8/DIP	High Speed, Low Power Operational Amp., 50MHz unity Gain bandwidth. Stability not affected by capacitive loading. 120ns settling time to 0.1%..	30	152-3891●	196.52
AM29F010B-70JD	SPN	32/PLCC	1Mb (128K x 8) Flash, 5V only, CMOS Memory - 70ns acc.	11	NEW SMD 166-1769●	37.36
AM29F040B-120PD	SPN	32/DIP	4Mb (512K x 8) Flash, 5V only, CMOS Memory - 120ns acc.	50	NEW 166-1770●	22.46
AMP02FPZ	ADI	8/DIP	High Accuracy, Low Noise, Low Offset, Instrumentation Amp. - 1 external resistor sets Gain from 1 to 10,000	50	152-3899●	361.70
AMP04FPZ	ADI	8/DIP	Precision Single Supply Instrumentation Amp. - 1 external resistor sets Gain from 1 to 1000	94	152-3884●	368.93
AT24C1024BW-SH25-B	ATM	8/SOIC	1M (128K × 8) 2-Wire Serial EEPROM	14	NEW SMD 166-1724●	339.74
AT27C256R-70PU	ATM	28/DIP	256K (32K × 8) CMOS OTP EPROM - 70ns Access	14	NEW 166-1725●	17.60
AT28C256-15PU	ATM	28/DIP	256K (32K × 8) CMOS Paged Parallel EEPROM - 150ns Access.	14	152-3791●	57.04
AT28C64B-15PU	ATM	28/DIP	64K (8K × 8) CMOS Parallel EEPROM With Page Write and DSP - 150ns Access	94	152-3792●	35.71
AT45DB321D-SU	ATM	8/SOIC	32MB, 2.7-volt, DataFlash, SPI, RapidS Serial Interface	27	NEW SMD 166-1726●	242.02
AT89C51ED2-SLSUM	ATM	44/PLCC	High-Performance 8-Bit CMOS Flash MCU With Data EEPROM	10	NEW SMD 166-1727●	148.83
ATMEGA16-16PU	ATM	40/DIP	8-Bit CMOS MCU, 16K ISP Flash, 1Kbytes RAM, 32 I/O Lines, 16MHZ.	14	152-3819●	32.64
ATMEGA168-20PU	ATM	28/DIP	8-Bit CMOS MCU, 16K Flash, 1K bytes RAM, 23 I/O Lines, 20MHz (IND TEMP)	10	NEW 166-1728●	31.48
ATMEGA32-16PU	ATM	40/DIP	8-Bit CMOS MCU, 32K Flash, 2kbytes RAM, 32 I/O Lines, 16MHz	14	NEW 166-1729●	35.78
ATMEGA8-16PU	ATM	28/DIP	8-Bit CMOS MCU, 8K Flash, 1kbytes RAM, 23 I/O Lines, 16MHz (IND TEMP)	14	152-3821●	25.39
ATMEGA88-20PU	ATM	28/DIP	8-Bit CMOS MCU, 8K Flash, 1K bytes RAM, 23 I/O Lines, 20MHz (IND TEMP)	37	NEW 166-1730●	24.37
ATTINY2313-20SU	ATM	20/SOIC	8-Bit CMOS MCU, 2K Flash, 128bytes RAM, 18 I/O Lines, 20MHz	50	NEW SMD 166-1731●	35.78
CA3140EZ	INTS	8/DIP	Operational Amp. With MOS/FET Input, Bipolar Output	27	152-3902●	13.24
CY6264-70SNXC	CYP	28/SOIC	64K (8K × 8) CMOS SRAM, 70ns acc	10	NEW SMD 166-1771●	73.91
DS80C320-MCG+	MAX	40/DIP	8-Bit CMOS CPU, 256 bytes RAM - 25MHz	50	152-3915●	72.67
FM24C256-G	RAM	8/SOIC	256K (32768 x 8) Serial FRAM Memory	100	NEW SMD 166-1773●	593.50
FM24C64-G	RAM	8/SOIC	Serial FRAM - 1MHz Bus speed	100	NEW SMD 166-1774●	171.36
FM24CL64-G	RAM	8/SOIC	64K (8192 x 8) Serial FRAM Memory, 1MHz Bus speed, I²C	100	NEW SMD 166-1775●	193.80
FM25CL64-G	RAM	8/SOIC	64K (8192 x 8) Serial FRAM Memory, High-speed, SPI	8	NEW SMD 166-1776●	193.80
HD6473258P10V	REN	64/DIP	8-Bit CMOS Microcontroller, 32Kb OTP PROM, 1024 bytes RAM, 53 I/O lines - 10MHz	18	152-3809●	187.35
HIP4081AIPZ	INTS	20/DIP	High Frequency MOSFET Driver With UnderVoltage Protection (Independent control of all 4 MOSFETs)	50	152-3905●	62.34
ICL7660SCPAZ	INTS	8/DIP	CMOS Voltage Converter, operates 1.5 to 12V (improved ICL7660CPA)	50	152-3904●	38.66
ICL7662CPA+	MAX	8/DIP	Voltage Convertor	50	152-3815●	96.13
ICL7667CPAZ	INTS	8/DIP	Dual MOSFET Driver	18	152-3903●	50.85
IDT7133SA35JG	IDT	68/PLCC	32K (2K x 16) CMOS Dual-Port SRAM, 35ns acc.	26	NEW SMD 166-1746●	217.53
IDT7204L12SOG	IDT	28/SOIC	4K x 9 CMOS ASYNC FIFO, 12ns acc.	25	NEW SMD 166-1745●	184.15
IR2110PBF	IR	14/DIP	One Side Hi Volt/SeparateLogic & Power Ground	16	152-3817●	53.68
ISO120G	BB	24/DIP	Precision Isolation Amp. 1500Vrms, bandwidth 60kHz (0.3" wide package)	50	152-3794●	1,422.97
L165V	ST	5/Pentawatt	Power Operational Amp. 3A output	50	152-3786●	125.88

RL Re-reeling available

Mftrs. List No.	Mftr.	Pins/Pkg	Description	Tube Quantity	Order Code	Price per Tube
L200CV	ST	5/Pentawatt	2.8V to 36V Adjustable Voltage Regulator & Current Regulator	25	152-3787●	69.26
L293N	UNI	16/DIP	Push-Pull Four Channel Driver - 2A output, 36V supply	20	152-3797●	150.29
L7805CV	ST	3/TO-220	5V Voltage Regulator	50	152-3916●	18.68
L7812CV	ST	3/TO-220	12V Voltage Regulator	40	152-3917●	18.68
LF356N	NSC	8/DIP	BI-FET General Purpose Operational Amp	45	152-3837●	22.88

LM317HVT	NSC	3/TO-220	3-Terminal Adjustable Regulator	45	152-3823●	64.82
LM317S	NSC	3/TO-263 (D2-Pak)	3-Terminal Adjustable Regulator	45	SMD 152-3866●	40.99
LM317T	NSC	3/TO-220	3-Terminal Adjustable Regulator	50	152-3842●	30.51
LM317T	ST	3/TO-220	1.2V to 37V Adjustable Voltage Regulator	25	152-3978●	24.70
LM324AN	NSC	14/DIP	Quad, Operational Amp	25	152-3835●	24.89
LM324N	NSC	14/DIP	Quad, Operational Amp	45	152-3836●	12.18
LM337T	NSC	3/TO-220	3-Terminal Adjustable Negative Regulator	45	152-3844●	38.14
LM340T-12	NSC	3/TO-220	Series 3-Terminal Positive Regulators	45	152-3856●	30.99
LM340T-15	NSC	3/TO-220	Series 3-Terminal Positive Regulators	40	152-3857●	31.46
LM358N	NSC	8/DIP	Dual, Low Power, Single Supply, Operational Amp.	20	152-3834●	14.40
LM3886TF	NSC	11/TO-220	Hi-Performance 68W Audio Power Amp With mute.	20	152-3846●	76.27
LM3914N-1	NSC	18/DIP	LED Bar /Dot Display Driver - 10 Linear Steps (replaces LM3914N)	40	152-3830●	35.80
LM6142BIN	NSC	8/DIP	Dual, High Speed, Low Power, 17MHz Rail-to-Rail, Input-Output Operational Amp	45	152-3858●	130.50
LM675T	NSC	5/TO-220	Power Operational Amp - 3A output.	40	152-3832●	150.14
LM741CN	NSC	8/DIP	Compensated Operational Amp	50	152-3833●	11.86
LM7805CT	FCH	3/TO-220	3-Terminal 1A Positive Voltage Regulator, 4% Output Voltage Accuracy	40	152-3798●	13.18
LMC6482IN	NSC	8/DIP	Dual, Rail-to-Rail Input and Output, CMOS Operational Amp.	25	152-3824●	50.42
LMC6484IN	NSC	14/DIP	Quad, Rail-to-Rail Input and Output, CMOS, Operational Amp.	60	152-3825●	63.03
LMD18245T	NSC	15/TO-220	3A, 55V DMOS Full-Bridge Motor Driver.	25	152-3861●	755.66
LT1014CN#PBF	LT	14/DIP	Quad, Low Power, Precision Operational Amp	50	152-3868●	145.56
LT1074CT#PBF	LT	5/TO-220	5A Switching Regulator optimised for use in Step-Down, "flyback" and other configurations. Input 5 to 45V	50	152-3869●	252.82
LT1076CT#PBF	LT	5/TO-220	2A Adj. Switching Regulator as LT1074CT.	50	152-3870●	176.80
LT1085CT#PBF	LT	3/TO-220	Adjustable LDO Regulator	50	152-3871●	178.57
LT1086CT#PBF	LT	3/TO-220	Adjustable LDORegulator, +1.2/29V	50	152-3872●	102.55
LTC1298CN8#PBF	LT	8/DIP	12-BIT ADC, 2-Channel	50	152-3873●	270.51
LTC1451CN8#PBF	LT	8/DIP	12-BIT DAC, CMOS	49	152-3874●	236.32
M25P16-VMF6P	ST	16/SOIC	16Mb (2Mb × 8) Serial Flash Memory - SPI Interface (IND TEMP).	100	NEW SMD 166-1751●	92.96
M25P40-VMN6P	ST	8/SOIC	4Mb (512K × 8) Serial Flash Memory -SPI interface (IND TEMP)	90	NEW SMD 166-1752●	157.08
M25P80-VMW6G	ST	8/WSOIC	8Mb (1M × 8) Serial Flash Memory -SPI interface (IND TEMP)	12	NEW SMD 166-1753●	274.48
M27C1001-12F1	ST	32/DIP	1Mb (128K × 8) CMOS EPROM - 120ns Access, 12.75V VPP	12	NEW 166-1755●	65.92
M27C1001-15F1	ST	32/FDIP32W	1Mb (128K × 8) CMOS EPROM - 35ns Access	12	NEW 166-1756●	29.49
M27C1001-45F1	ST	32/DIP	1Mb (128K × 8) CMOS OTP PROM - 45ns Access, 12.75V VPP	12	NEW 166-1757●	56.81
M27C2001-10F1	ST	32/FDIP32W	2Mb (256K × 8) CMOS EPROM - 55ns Access	13	NEW 166-1758●	62.16
M27C256B-15F1	ST	28/DIP	256K (32K × 8) CMOS EPROM - 150ns Access, 12.75V VPP.	12	NEW 166-1761●	26.62
M27C4001-10F1	ST	32/FDIP32W	4Mb (512K × 8) CMOS EPROM - 35ns Access	13	NEW 166-1762●	65.63
M27C512-90F6	ST	28/DIP	512k (64k × 8) CMOS EPROM 90ns Access, 12.75V VPP	13	NEW 166-1763●	37.75
M27C64A-10F1	ST	28/DIP	64K (8K × 8) EPROM - 100ns Access, 12.5V VPP.	12	NEW 166-1764●	41.82
M48T08-100PC1	ST	28/DIP	64K (8K × 8) TIMEKEEPER® SRAM, 100ns acc	12	NEW 166-1765●	185.61
M48Z08-100PC1	ST	28/DIP	64K (8K × 8) ZEROPower® SRAM - 100ns Access VCC=4.75V to 5.5V	12	NEW 166-1766●	120.56
M48Z18-100PC1	ST	28/DIP	64K (8K × 8) ZEROPower® SRAM - 100ns Access VCC=4.5V to 5.5V	100	NEW 166-1767●	120.56
M95128-WMN6P	ST	8/SOIC	128K (16K × 8) Serial CMOS EEPROM - Low Voltage (IND TEMP)	50	NEW SMD 166-1768●	146.96
MAX1232CPA+	MAX	8/DIP	Low Power CMOS Micro-Monitor	18	152-3911●	99.57
MAX186DCPP+	MAX	20/DIP	12-BIT ADC, Low Power	25	152-3805●	240.80
MAX691ACPE+	MAX	16/DIP	Microprocessor Supervisory Circuit	25	152-3912●	80.39
MAX691CPE+	MAX	16/DIP	Microprocessor Supervisory Circuit	15	152-3913●	110.72
MAX7219CNG+	MAX	24/DIP	8-digit, Serially Interfaced, LED Display Driver (C.C. Display), µP interface.	25	152-3914●	92.01
MC14490PG	ON	16/DIP	Hex Bounce Eliminator	25	152-3906●	74.95
MC14584BCPG	ON	14/DIP	Hex Schmitt Trigger	26	152-3907●	11.05
MC68HC705C8ACFNE	FSL	44/PLCC	8-Bit MCU	23	NEW SMD 166-1748●	156.55
MC68HC711E9CFNE2	FSL	52/PLCC	8-Bit MCU, 512 bytes RAM, 12K bytes OTP PROM, 38 I/O ports, multiplexed Bus, timer and ADC. PLCC Package	50	NEW SMD 166-1749●	315.23
MC7805CTG.	ON	3/TO-220	Regulator +5.0V	60	152-3908●	16.27
MCP3201-CI/P	MCHIP	8/DIP	12-BIT ADC, CMOS	50	152-3919●	67.80
MIC29152WT	MICR	5/TO-220	Adjustable Regulator +2.3/26V	9	152-3814●	207.35
MM5453N	NSC	40/DIP	Serial In/Parallel Out LCD Driver (Serially Loaded)	50	152-3838●	52.82
MM74C922N	FCH	18/DIP	16 Key KeyBoard Encoder	60	152-3770●	69.00
OP07CP	TI	8/DIP	Precision Operational Amp. - Vos 150µV mAx. Drift 1.8µV/°C mAx.	50	152-3802●	38.45
OP07CPZ	ADI	8/DIP	Precision Operational Amp. - Vos 150µV mAx. Drift 1.6µV/°C mAx.	50	152-3886●	45.81
OP177GPZ	ADI	8/DIP	Ultra-Precision Operational Amp	50	152-3890●	50.64
OP200GPZ	ADI	8/DIP	Dual, Low Offset, Low Power Operational Amp. (improved OP07).	50	152-3893●	178.43
OP270GPZ	ADI	8/DIP	Dual, Low Noise, Precision Operational Amp	50	152-3894●	163.36
OP275GPZ	ADI	8/DIP	Low Noise, Low Distortion, Audio Amp., With a 'Butler' Amplifier front end.	50	152-3882●	68.12
OP27EPZ	ADI	8/DIP	Low Noise Precision Operational Amp (i/p Vos mAx 25µV)	50	152-3875●	168.80
OP27GPZ	ADI	8/DIP	Low Noise Precision Operational Amp (i/p Vos mAx=100µV)	50	152-3887●	78.37
OP290GPZ	ADI	8/DIP	Dual, Precision Low Voltage, MicroPower Operational Amp	25	152-3895●	194.11
OP400GPZ	ADI	14/DIP	Quad, Low Offset, Precision Operational Amp	25	152-3896●	163.36
OP470GPZ	ADI	14/DIP	Quad, Ultra Low Noise Operational Amp	50	152-3897●	114.53
OP90GPZ	ADI	8/DIP	Precision Low Voltage MicroPower Operational Amp	50	152-3888●	135.04

RL Re-reeling available

ICs in Full-Tubes & Waffle Tray Packaging - continued

ICs in Full Tube Quantities - continued

Mftrs. List No.	Mftr.	Pins/Pkg	Description	Tube Quantity	Order Code	Price per Tube
OP97FPZ	ADI	8/DIP	Low Power OP07, High-Precision Operational Amp	50	152-3889	72.34
OPA2134PA	TI	8/DIP	Dual, Low Noise, Low Distortion Audio Amp	50	152-3795	76.90
OPA2604AP	TI	8/DIP	Dual, FET Operational Amp. - Low Noise, Low Distortion, High GBW	60	152-3793	128.17
PIC12F508-I/P	MCHIP	8/DIP	8-Bit Flash Microcontroller	60	152-3803	28.20
PIC12F629-I/P	MCHIP	8/DIP	8-Bit CMOS MCU, 1K Flash, 64 bytes RAM - 20MHz (IND TEMP)	100	152-3920	41.40
PIC12F629-I/SN	MCHIP	8/SOIC	8-Bit CMOS MCU, 1K Flash, 64 bytes RAM - 20MHz (IND TEMP)	60	NEW SMD 166-0010	48.00
PIC12F675-I/P	MCHIP	8/DIP	8-Bit CMOS MCU, 1K Flash, 64 bytes RAM With ADC - 20MHz (IND TEMP)	100	152-3921	45.00
PIC12F675-I/SN	MCHIP	8/SOIC	8-Bit CMOS MCU, 1K Flash, 64 bytes RAM With ADC - 20MHz (IND TEMP)	60	NEW SMD 166-0011	53.00
PIC12F683-I/P	MCHIP	8/DIP	8-Bit CMOS MCU, 2K Flash, 128 bytes RAM - 20MHZ (IND TEMP)	100	152-3923	52.20
PIC12F683-I/SN	MCHIP	8/SOIC	8-bit Microcontoller, 3.5K Flash	25	NEW SMD 166-0012	62.00
PIC16C54A-04/P	MCHIP	18/DIP	8-Bit CMOS MCU, 512b OTP PROM, 25b RAM, 12 I/O lines - 4MHz	25	152-3924	43.25
PIC16C54C-04/P	MCHIP	18/DIP	8-Bit CMOS MCU, 512b OTP PROM, 25b RAM, 12 I/O lines - 4MHz	15	152-3925	25.75
PIC16C55A-04/P	MCHIP	28/DIP	8-Bit CMOS MCU, 512b OTP PROM, 24b RAM, 20 I/O lines - 4MHz	15	152-3784	18.90
PIC16C55-XT/P	MCHIP	28/DIP	8-Bit CMOS MCU, 512b OTP PROM, 24b RAM, 20 I/O lines - 4MHz	15	152-3926	34.20
PIC16C57-XT/P	MCHIP	28/DIP	8-Bit CMOS MCU. 2Kb OTP PROM. 72b RAM. 20 I/O lines	10	152-3927	43.50
PIC16C64A-04/P	MCHIP	40/DIP	8-Bit CMOS EPROM MCU, 2K OTP PROM, 128 bytes RAM - 4MHz	10	152-3928	35.70
PIC16C65B-04/P	MCHIP	40/DIP	8-Bit CMOS EPROM MCU. 4K OTP PROM, 192 bytes RAM - 4MHz	25	152-3929	27.10
PIC16C71-04/P	MCHIP	18/DIP	8-Bit CMOS EPROM MCU With ADC, 1K OTP PROM - 4MHz	25	152-3930	68.50
PIC16C711-04/P	MCHIP	18/DIP	8-Bit CMOS EPROM MCU With ADC, 1K OTP PROM, 68 bytes RAM - 4MHz	25	152-3931	44.50
PIC16C711-20I/P	MCHIP	18/DIP	8-Bit CMOS EPROM MCU With ADC, 1K OTP PROM, 68 bytes RAM - 20MHz (IND TEMP)	15	152-3785	52.75
PIC16C745-I/SP	MCHIP	28/SDIL	8-Bit CMOS EPROM MCU, 8K OTP PROM, 256 Bytes RAM (IND TEMP)	10	152-3932	34.65
PIC16C74A-10/P	MCHIP	40/DIP	8-Bit CMOS EPROM MCU, 4K OTP PROM, 192 bytes RAM - 10MHz	10	152-3933	54.40
PIC16C74B-04/P	MCHIP	40/DIP	8-Bit CMOS MCU, 4K OTP PROM, 192 bytes RAM, 33 I/O lines - 4MHz	10	152-3935	37.00
PIC16C774-I/P	MCHIP	40/DIP	8-Bit CMOS EPROM MCU With ADC, 4K EPROM, 256 bytes RAM, 33 I/O lines - (IND TEMP)	25	152-3936	40.70
PIC16F627A-I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 224 bytes RAM - 20MHz (IND TEMP)	42	NEW 166-0013	28.50
PIC16F627A-I/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 1K Flash, 224 bytes RAM - 20MHz (IND TEMP)	25	NEW SMD 166-0014	48.72
PIC16F628-04/P	MCHIP	18/DIP	8-Bit CMOS EPROM MCU, 2K Flash, 224 bytes RAM - 4MHz	25	152-3937	40.75
PIC16F628A-I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 2K Flash, 224 bytes RAM - 20MHz (IND TEMP)	42	152-3938	26.00
PIC16F628A-I/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 2K Flash, 224 bytes RAM - 20MHz (IND TEMP)	30	NEW SMD 166-0016	55.44
PIC16F630-I/P	MCHIP	14/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 64 bytes RAM - 20MHz (IND TEMP)	57	152-3939	26.10
PIC16F676-I/SL	MCHIP	14/SOIC	8-Bit CMOS EEPROM MCU, 1K Flash, 64 bytes RAM - 20MHz (IND TEMP)	30	NEW SMD 166-0017	49.59
PIC16F684-I/P	MCHIP	14/DIP	8-Bit MCU, 2K Flash, 128 bytes RAM - 20MHZ (IND TEMP)	57	152-3940	29.10
PIC16F684-I/SL	MCHIP	14/SOIC	8-Bit MCU, 2K Flash, 128 bytes RAM - 20MHZ (IND TEMP)	57	NEW SMD 166-0018	50.16
PIC16F688-I/SL	MCHIP	14/SOIC	8-Bit CMOS MCU With ADC, 4Kb Prog, 256 bytes RAM, 12 I/O lines - 20MHz	22	NEW SMD 166-0021	53.01
PIC16F690-I/P	MCHIP	20/DIP	8-Bit CMOS EEPROM MCU With nanoWatt TechnoLogy - 20MHz (IND TEMP)	67	152-3800	27.06
PIC16F690-I/SS	MCHIP	20/SSOP	8-Bit CMOS EEPROM MCU With nanoWatt TechnoLogy - 20MHz (IND TEMP)	15	NEW SMD 166-0022	72.36
PIC16F737-I/SP	MCHIP	28/SDIL	8-Bit MCU. 4K Flash, 368 bytes RAM - 20MHz (IND TEMP)	27	NEW 166-0023	39.00
PIC16F73-I/SO	MCHIP	28/SOIC	8-Bit CMOS Flash EPROM MCU 192 bytes RAM (IND TEMP)	15	NEW SMD 166-0024	65.07
PIC16F73-I/SP	MCHIP	28/SDIL	8-Bit CMOS Flash EPROM MCU 192 bytes RAM (IND TEMP)	10	152-3941	36.15
PIC16F74-I/P	MCHIP	40/DIP	8-Bit CMOS Flash EPROM MCU 192 bytes RAM (IND TEMP)	15	NEW 166-0025	29.40
PIC16F76-I/SP	MCHIP	28/SDIL	8-Bit CMOS EPROM MCU 368 bytes RAM (IND TEMP)	25	NEW 166-0026	45.60
PIC16F818-I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 128 bytes RAM - 20MHz (IND TEMP)	25	152-3942	34.50
PIC16F819-I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 2K Flash, 256 bytes RAM - 20MHz (IND TEMP)	42	152-3943	39.25
PIC16F819-I/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 2K Flash, 256 bytes RAM - 20MHz (IND TEMP)	25	NEW SMD 166-0027	67.20
PIC16F84-04/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes RAM - 4MHz	42	152-3944	79.00
PIC16F84-04/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes RAM - 4MHz	42	NEW SMD 166-0029	134.82
PIC16F84-10/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes RAM - 10MHz	25	NEW SMD 166-0030	144.90
PIC16F84-10I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes - 10MHz (IND TEMP)	25	152-3945	93.25
PIC16F84A-04/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes RAM - 4MHz	25	152-3947	63.25
PIC16F84A-20/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes RAM - 20MHz	25	NEW 166-0031	67.50
PIC16F84A-20I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 1K Flash, 68 bytes RAM - 20MHz (IND TEMP)	27	152-3948	74.25
PIC16F870-I/SO	MCHIP	28/SOIC	8-Bit CMOS EEPROM MCU, 2K Flash, 128 bytes RAM (IND TEMP)	15	NEW SMD 166-0033	56.16
PIC16F870-I/SP	MCHIP	28/SDIL	8-Bit CMOS EEPROM MCU, 2K Flash, 128 bytes RAM (IND TEMP)	15	152-3949	31.20
PIC16F872-I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 2K Flash, 128 bytes RAM (IND TEMP)	15	152-3950	31.20
PIC16F873-04/SP	MCHIP	28/SDIL	8-Bit CMOS MCU. 4K Flash, 192 bytes RAM - 4MHz	15	152-3951	48.15
PIC16F873-20/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz	27	152-3952	52.65
PIC16F873A-I/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz (IND TEMP)	15	NEW SMD 166-0034	79.65
PIC16F873A-I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz (IND TEMP)	47	152-3953	44.25
PIC16F873A-I/SS	MCHIP	28/SSOP	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz (IND TEMP)	10	NEW SMD 166-0035	141.47
PIC16F874-04/P	MCHIP	40/DIP	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 4MHz	10	152-3954	35.70
PIC16F874-20I/P	MCHIP	40/DIP	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz (IND TEMP)	27	152-3955	42.10
PIC16F874A-I/L	MCHIP	44/PLCC	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz (IND TEMP)	10	NEW SMD 166-0036	99.63
PIC16F874A-I/P	MCHIP	40/DIP	8-Bit CMOS MCU, 4K Flash, 192 bytes RAM - 20MHz (IND TEMP)	27	152-3956	32.20
PIC16F876-04/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 4MHz	15	NEW SMD 166-0037	95.31
PIC16F876-04/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 4MHz	27	152-3957	52.95
PIC16F876-20/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz	15	NEW SMD 166-0038	102.33
PIC16F876-20/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz	27	152-3959	56.85
PIC16F876-20I/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	15	NEW SMD 166-0039	112.32
PIC16F876-20I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	27	152-3961	62.40
PIC16F876A-I/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	15	NEW SMD 166-0040	85.86
PIC16F876A-I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	47	152-3962	47.70
PIC16F876A-I/SS	MCHIP	28/SSOP	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	27	NEW SMD 166-0041	152.28
PIC16F877-04/L	MCHIP	44/PLCC	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 4MHz	10	NEW SMD 166-0042	121.77
PIC16F877-04/P	MCHIP	40/DIP	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 4MHz	10	152-3963	37.90
PIC16F877-20/P	MCHIP	40/DIP	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz	10	152-3964	40.50
PIC16F877-20I/P	MCHIP	40/DIP	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	27	152-3965	44.50
PIC16F877A-I/L	MCHIP	44/PLCC	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	10	NEW SMD 166-0043	106.92
PIC16F877A-I/P	MCHIP	40/DIP	8-Bit CMOS MCU, 8K Flash, 368 bytes RAM - 20MHz (IND TEMP)	25	152-3966	34.70
PIC16F88-I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 4K Flash, 368 bytes RAM, With ADC - 20MHz (IND TEMP)	42	152-3967	48.50
PIC16F88-I/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 4K Flash, 368 bytes RAM, With ADC - 20MHz (IND TEMP)	25	NEW SMD 166-0045	83.58
PIC16LC58B-04I/P	MCHIP	18/DIP	8-Bit CMOS EPROM MCU, 2Kb OTP PROM, 73b RAM, 12 I/O lines - 4MHz (IND TEMP, Low Power)	25	152-3968	34.00
PIC18F1320-I/P	MCHIP	18/DIP	8-Bit CMOS EEPROM MCU, 4K Flash, 256 bytes RAM - 40MHz (IND TEMP)	42	NEW 166-0046	50.50
PIC18F1320-I/SO	MCHIP	18/SOIC	8-Bit CMOS EEPROM MCU, 4K Flash, 256 bytes RAM - 40MHz (IND TEMP)	15	NEW SMD 166-0047	81.90
PIC18F2420-I/SP	MCHIP	28/SDIL	10-Bit MCU, 16k Flash, 768 bytes SRAM - 40 MHz (IND TEMP)	15	NEW 166-0048	38.85
PIC18F242-I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 16k Flash, 768 bytes RAM - 40MHz (IND TEMP)	27	152-3969	52.50
PIC18F2520-I/SO	MCHIP	28/SOIC	10-Bit MCU, 32k Flash, 1536 bytes SRAM - 40 MHz (IND TEMP)	15	NEW SMD 166-0049	77.49
PIC18F2520-I/SP	MCHIP	28/SDIL	10-Bit MCU, 32k Flash, 1536 bytes SRAM - 40 MHz (IND TEMP)	15	NEW 166-0050	44.85
PIC18F2525-I/SP	MCHIP	28/SDIL	8-Bit MCU, 48K Flash, 3968 bytes RAM - 40MHZ (IND TEMP)	27	NEW 166-0051	50.85
PIC18F252-I/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP)	15	NEW SMD 166-0052	103.14
PIC18F252-I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP)	27	152-3970	57.30
PIC18F2550-I/SO	MCHIP	28/SOIC	8-Bit MCU, SPI, I²C, 2 x CCP, EUSART, 24 I/O Ports, 48MHz (IND TEMP)	15	NEW SMD 166-0053	83.97
PIC18F2550-I/SP	MCHIP	28/SDIL	8-Bit MCU, SPI, I²C, 2 x CCP, EUSART, 24 I/O Ports, 48MHz (IND TEMP)	27	152-3822	48.60
PIC18F2580-I/SO	MCHIP	28/SOIC	10-Bit MCU, 32k Flash, 1536 bytes SRAM - 40 MHz (IND TEMP)	27	NEW SMD 166-0054	101.79
PIC18F2585-I/SO	MCHIP	28/SOIC	8-Bit MCU, 48K Flash, 3328 bytes RAM - 40MHZ (IND TEMP)	27	NEW SMD 166-0055	116.37
PIC18F258-I/SO	MCHIP	28/SOIC	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP)	15	NEW SMD 166-0058	123.66
PIC18F258-I/SP	MCHIP	28/SDIL	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP)	27	152-3972	68.70
PIC18F2620-I/SO	MCHIP	28/SOIC	8-Bit MCU , 64K Flash, 1024 bytes RAM - 40MHZ (IND TEMP)	15	NEW SMD 166-0059	99.09
PIC18F2620-I/SP	MCHIP	28/SDIL	8-Bit MCU , 64K Flash, 1024 bytes RAM - 40MHZ (IND TEMP)	10	NEW 166-0060	57.00
PIC18F4520-I/P	MCHIP	40/DIP	8-Bit MCU 32k Flash, 1536 bytes RAM, 36 I/O lines - 40MHZ (IND TEMP)	27	152-3812	31.20

ADUC832BSZ	ADI	52/LQFP	8-Bit MicroConverter With 12-Bit ADC/DAC With embedded 62K Flash MCU	80	SMD 152-8271	813.10
ADUC834BSZ	ADI	52/MQFP	8-Bit MicroConverter With Dual 16/24-Bit ADC and embedded Flash MCU	80	SMD 152-8272	1,067.73
ADUC836BSZ	ADI	52/MQFP	8-Bit MicroConverter With Dual 16-Bit ADC and embedded Flash MCU	80	SMD 152-8309	762.40
AS7C3256A-10TIN	ALL	28/TSOP	SRAM 256K, 3.3V	117	NEW SMD 167-8904	133.38
AT45DB642D-TU	ATM	28/TSOP	64Mb (8M x 8) Serial Flash Memory - SPI and parallel I/O interface (IND TEMP, TSOP)	117	NEW SMD 166-1732	1,055.04
AT89C51ED2-RLTUM	ATM	44/VQFP	High-Performance 8-Bit CMOS Flash MCU With Data EEPROM	80	NEW SMD 166-1733	440.96
AT89S52-24AU	ATM	44/TQFP	8-Bit CMOS MCU With 8Kb ISP Flash	80	SMD 152-8289	80.26
AT89S8253-24AU	ATM	44/TQFP	8-Bit CMOS MCU With 12Kb ISP Flash & 2K EEPROM	80	SMD 152-8290	232.09
AT90CAN128-16AU	ATM	64/TQFP	8-Bit, 128K Flash, 4K EEPROM, CAN Controller	45	NEW SMD 166-1734	370.43
AT90USB1287-16AU	ATM	64/TQFP	8-Bit USB On-The-Go MCU, 128K Flash, 8 Kbytes RAM, 16MHz (IND TEMP)	45	NEW SMD 166-1736	400.35
AT91SAM7S128-AU-001	ATM	64/LQFP	32-Bit SmART ARM7 128K Flash	80	SMD 152-8286	510.59
AT91SAM7S256-AU-001	ATM	64/LQFP	32-Bit SmART ARM7 256K Flash	80	SMD 152-8287	610.19
AT91SAM7S64-AU-001	ATM	64/LQFP	32-Bit SmART ARM7 64K Flash	80	SMD 152-8288	375.20
ATMEGA128-16AU	ATM	64/TQFP	8-Bit CMOS MCU, 128K Flash, 4K bytes RAM, 53 I/O Lines, 16MHz (IND TEMP)	45	NEW SMD 166-1737	398.72
ATMEGA128L-8AU	ATM	64/TQFP	8-Bit CMOS MCU, 128K Flash, 4K bytes RAM, 53 I/O Lines, 8MHz (IND TEMP)	45	NEW SMD 166-1739	398.72
ATMEGA16-16AU	ATM	44/TQFP	8-Bit CMOS MCU, 16K ISP Flash, 1Kbytes RAM, 32 I/O Lines, 16MHZ	80	SMD 152-8422	244.66
ATMEGA162-16AU	ATM	44/TQFP	8-Bit CMOS MCU, 16K Flash, 1K bytes RAM, 35 I/O Lines, 16MHz (IND TEMP)	80	SMD 152-8423	275.60
ATMEGA162V-8AU	ATM	44/TQFP	8-Bit CMOS MCU, 16K Flash, 1K bytes RAM, 35 I/O Lines, 8MHz (IND TEMP)	80	SMD 152-8424	265.93
ATMEGA168-20AU	ATM	32/TQFP	8-Bit CMOS MCU, 16K Flash, 1K bytes RAM, 23 I/O Lines, 20MHz (IND TEMP)	125	SMD 152-8425	228.16
ATMEGA168V-10AU	ATM	32/TQFP	8-Bit CMOS MCU, 16K Flash, 1K bytes RAM, 23 I/O Lines, 10MHz (IND TEMP)	125	SMD 152-8426	228.16
ATMEGA16L-8AU	ATM	44/TQFP	8-Bit CMOS MCU, 16K ISP Flash, 1Kbytes RAM, 32 I/O Lines, 8MHZ	80	SMD 152-8428	256.26
ATMEGA2560-16AU	ATM	100/TQFP	8-Bit CMOS MCU, 256K Flash, 8K bytes RAM, 86 I/O Lines, 16MHz (IND TEMP)	45	NEW SMD 166-1740	369.34
ATMEGA32-16AU	ATM	44/TQFP	8-Bit CMOS MCU, 32K Flash, 2kbytes RAM, 32 I/O Lines, 16MHz	80	SMD 152-8429	324.92
ATMEGA32L-8AU	ATM	44/TQFP	8-Bit CMOS MCU, 32K Flash, 2 kbytes RAM, 32 I/O Lines, 8MHz	80	SMD 152-8430	324.92
ATMEGA48-20AU	ATM	32/TQFP	8-Bit CMOS MCU, 8K Flash, 512 bytes RAM, 23 I/O Lines, 20MHz (IND TEMP)	125	SMD 152-8431	142.03
ATMEGA48V-10AU	ATM	32/TQFP	8-Bit CMOS MCU, 4K Flash, 512 bytes RAM, 23 I/O Lines, 10MHz (IND TEMP)	125	SMD 152-8432	142.03
ATMEGA64-16AU	ATM	64/TQFP	8-Bit CMOS MCU, 64K Flash, 4kbytes RAM, 32 I/O Lines, 16MHz	45	NEW SMD 166-1741	297.54
ATMEGA644-20AU	ATM	44/TQFP	8-Bit CMOS MCU, 64K Flash, 4K bytes RAM, 32 I/O Lines, 20MHz (IND TEMP)	80	SMD 152-8382	311.38
ATMEGA8-16AU	ATM	32/TQFP	8-Bit CMOS MCU, 8K Flash, 1kbytes RAM, 23 I/O Lines, 16MHz (IND TEMP)	125	SMD 152-8433	194.91
ATMEGA8515-16AU	ATM	44/TQFP	8-Bit 8K ISP Flash, 512 bytes RAM, 16MHZ (IND TEMP)	80	SMD 152-8434	189.53
ATMEGA8515L-8AU	ATM	44/TQFP	8-Bit 8K ISP Flash, 512 bytes RAM, 8MHZ (IND TEMP)	80	SMD 152-8435	189.53
ATMEGA8535-16AU	ATM	44/TQFP	8-Bit ISP 8K Flash, 512bytes RAM 16MHZ (IND TEMP)	80	SMD 152-8437	212.74
ATMEGA88-20AU	ATM	32/TQFP	8-Bit CMOS MCU, 8K Flash, 1K bytes RAM, 23 I/O Lines, 20MHz (IND TEMP)	125	SMD 152-8438	207.01
ATMEGA88V-10AU	ATM	32/TQFP	8-Bit CMOS MCU, 8K Flash, 1K bytes RAM, 23 I/O Lines, 10MHz (IND TEMP)	125	SMD 152-8442	207.01
ATMEGA8L-8AU	ATM	32/TQFP	8-Bit CMOS MCU, 8K Flash, 1kbytes RAM, 23 I/O Lines, 8MHz (IND TEMP)	125	SMD 152-8443	194.91
C8051F005-GQ	SLAB	64/TQFP	F005DK-B, Order Code: 412-7973 (UK Plug); F005DK-E, Order Code: 412-7985 (Euro Plug)	80	SMD 152-8457	1,429.94

PIC18F452-I/PT	MCHIP	44/TQFP	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP)	80	SMD 152-8484	386.40
PIC18F4550-I/PT	MCHIP	44/TQFP	8-Bit MCU, SPI, I²C, CCP, ECCP, SPP, EUSART, 35 I/O Ports, 48MHz (IND TEMP)	80	SMD 152-8447	264.00
PIC18F4580-I/PT	MCHIP	44/TQFP	10-Bit MCU, 32k Flash, 1536 bytes SRAM - 40 MHz (IND TEMP)	80	SMD 152-8449	316.80
PIC18F458-I/PT	MCHIP	44/TQFP	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP)	80	SMD 152-8485	415.20
PIC18F4620-I/PT	MCHIP	44/TQFP	8-Bit MCU, 64K Flash, 3986 bytes RAM - 40MHZ (IND TEMP)	80	SMD 152-8363	308.80
PIC18F4680-I/PT	MCHIP	44/TQFP	8-Bit MCU, 64K Flash, 3328 bytes RAM - 40MHZ (IND TEMP)	80	SMD 152-8364	380.80
PIC18F6410-I/PT	MCHIP	64/TQFP	8-Bit, 8K Flash, CMOS MCU, 768 bytes RAM - 40MHZ (IND TEMP)	80	SMD 152-8366	207.20
PIC18F6520-I/PT	MCHIP	64/TQFP	8-Bit CMOS EEPROM MCU, 32K Flash, 2Kbytes RAM, With ADC - 40MHz (IND TEMP)	80	SMD 152-8486	387.20
PIC18F6525-I/PT	MCHIP	64/TQFP	8-Bit CMOS EEPROM MCU, 48K Flash, 4Kbytes RAM, With ADC - 40MHz (IND TEMP)	80	SMD 152-8487	435.20
PIC18F6585-I/PT	MCHIP	64/TQFP	8-Bit CMOS EEPROM MCU, 48K Flash, 4Kbytes RAM, With ADC and CAN - 40MHz (IND TEMP)	80	SMD 152-8274	466.40
PIC18F6620-I/PT	MCHIP	64/TQFP	8-Bit CMOS MCU, 64K Flash With ADC - 40MHz (IND TEMP)	80	SMD 152-8489	572.80
PIC18F6621-I/PT	MCHIP	64/TQFP	8-Bit CMOS EEPROM MCU, 64K Flash, 4Kbytes RAM, With ADC - 40MHz (IND TEMP)	80	SMD 152-8491	466.40
PIC18F6627-I/PT	MCHIP	64/TQFP	8-Bit CMOS MCU, 96K Flash, 3936 bytes RAM - 40MHZ (IND TEMP)	80	SMD 152-8417	435.20
PIC18F6680-I/PT	MCHIP	64/TQFP	8-Bit CMOS EEPROM MCU, 64K Flash, 3Kbytes RAM, With ADC and CAN - 40MHz (IND TEMP)	80	SMD 152-8492	500.80
PIC18F6720-I/PT	MCHIP	64/TQFP	8-Bit CMOS MCU, 128K Flash With ADC - 40MHz (IND TEMP)	80	SMD 152-8493	636.80
PIC18F6722-I/PT	MCHIP	64/TQFP	8-Bit CMOS MCU, 128K Flash, 3936 bytes RAM - 40MHZ (IND TEMP)	80	SMD 152-8416	496.00
PIC18F8527-I/PT	MCHIP	80/TQFP	8-bit Microcontroller, 48K Flash	60	NEW SMD 164-9745	273.60
PIC18F8720-I/PT	MCHIP	80/TQFP	8bit MCU, 128K Flash	60	NEW SMD 164-0832	485.40
PIC18F8722-I/PT	MCHIP	80/TQFP	8-Bit CMOS MCU, 128K Flash, 3936 bytes RAM - 40MHZ (IND TEMP)	60	NEW SMD 164-9744	395.40
PIC18LF4520-I/PT	MCHIP	44/TQFP	8 Bit MCU,32K Flash,3K8 RAM	80	SMD 152-8391	256.80
PIC18LF452-I/PT	MCHIP	44/TQFP	8-Bit CMOS MCU, 32k Flash, 1536 bytes RAM - 40MHz (IND TEMP, Low Power)	80	SMD 152-8494	405.60
PIC18LF4550-I/PT	MCHIP	44/TQFP	8 Bit MCU,32K Flash,2K RAM,USB	80	SMD 152-8392	277.60
PIC18LF458-I/PT	MCHIP	44/TQFP	8-Bit CMOS MCU, 32K Flash, 1536 bytes RAM, wide Voltage, With CAN- 40MHz (IND TEMP)	80	SMD 152-8278	436.80
PIC18LF6620-I/PT	MCHIP	64/TQFP	8-Bit CMOS MCU, 64K Flash With ADC, Low Power - 40MHz (IND TEMP)	80	SMD 152-8495	600.80
PIC18LF6720-I/PT	MCHIP	64/TQFP	8-Bit CMOS MCU, 128K Flash With ADC, Low Power - 40MHz (IND TEMP)	80	SMD 152-8497	668.80
PIC24FJ128GA006-I/PT	MCHIP	64/TQFP	16-Bit MCU, 128K Flash, 8K RAM	80	SMD 152-8319	235.20
PIC24FJ64GA006-I/PT	MCHIP	64/TQFP	16-Bit MCU, 64K Flash, 8K RAM	80	SMD 152-8320	214.40
PIC24HJ128GP206-I/PT	MCHIP	64/TQFP	16-Bit MCU/DSC, 128K Flash, 40MIPS (Package = 10x10x1 mm)	80	SMD 152-8321	262.40
PIC24HJ256GP206-I/PT	MCHIP	64/TQFP	16-Bit MCU/DSC, 256K Flash, 40MIPS (Package = 10x10x1 mm)	80	SMD 152-8322	291.20
PIC24HJ64GP206-I/PT	MCHIP	64/TQFP	16-Bit MCU/DSC, 64K Flash, 40MIPS (Package = 10x10x1 mm)	80	SMD 152-8323	243.20
QT60161B-ASG	QUAN	44/TQFP	TOUCH SENSOR 16 CHAN	80	SMD 152-8498	275.20

RL Re-reeling available

Packaged, protected, perfect

Thousands of ICs now available in our innovative peel packaging

We've extended our peel packaging to cover IC case sizes from 5x5mm to 14x14mm:

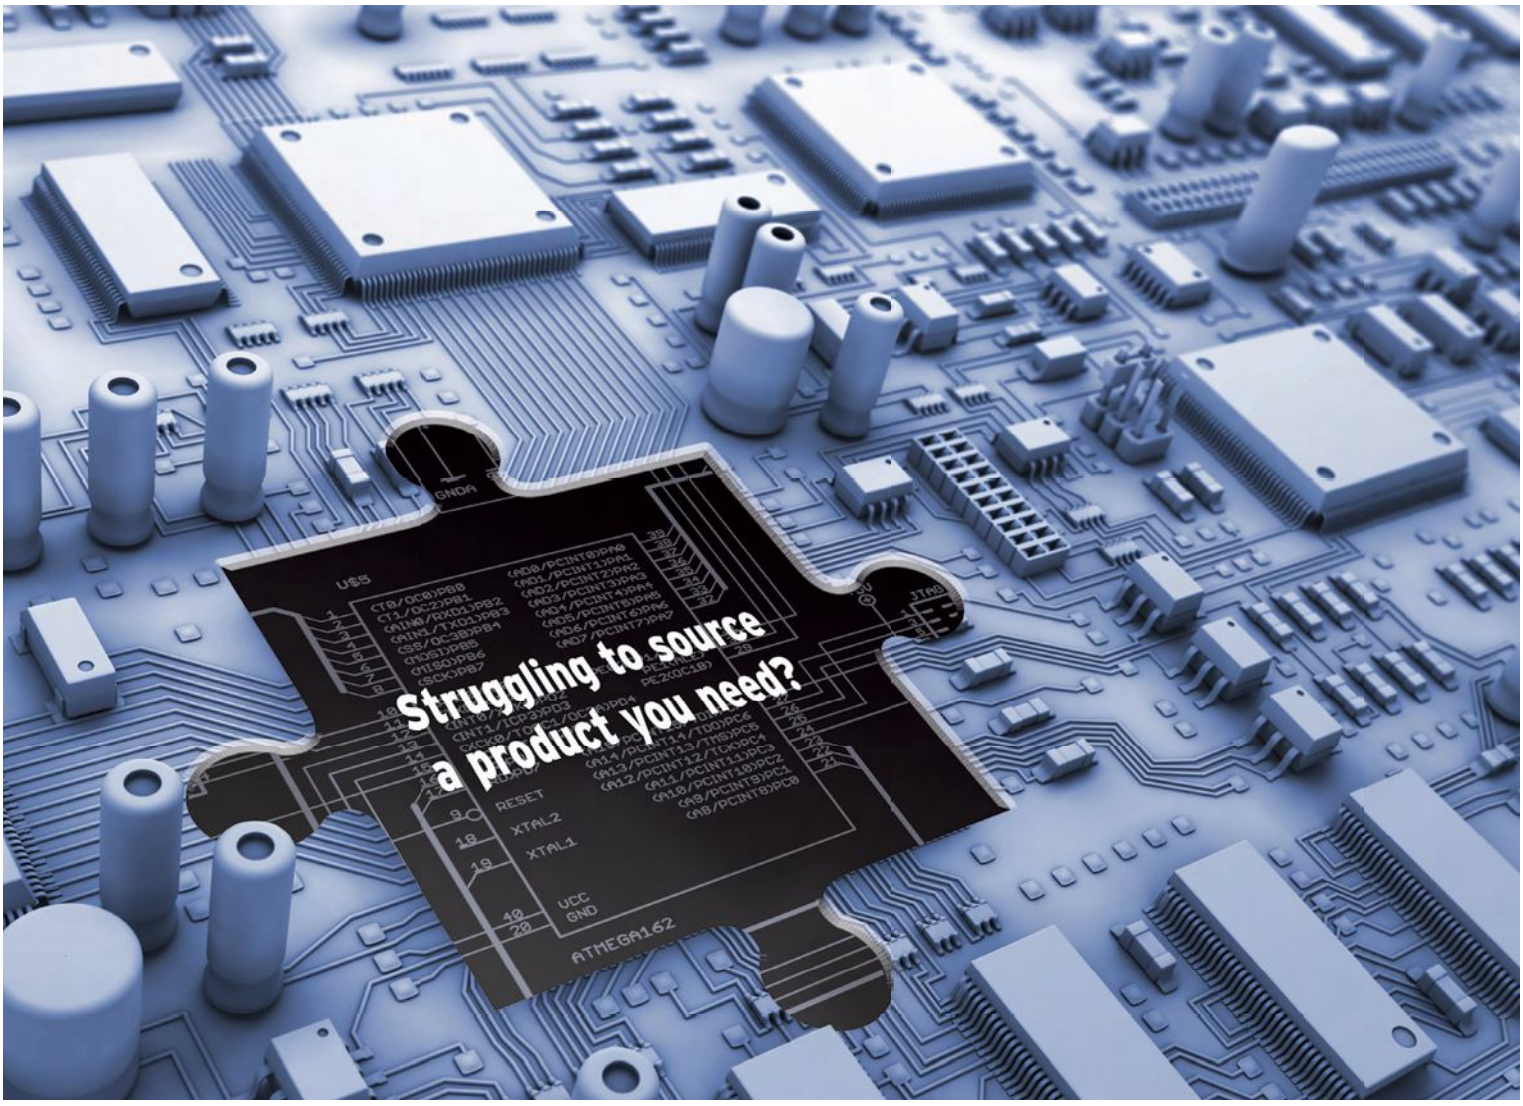
- Complete protection for a wide range of ICs
- Clear product identification with batch number and Farnell part number
- All round protection in transit and storage
- Reduced moisture ingress and anti-static protection
- No minimum order requirement

Peel Packaging - exclusive to Farnell: **www.farnell.com**

Farnell

A Premier Farnell Company

5 great reasons to register online



1. Even more choice with over 480,000 products
2. 700 new products added online every week
3. Search from over 352,000 technical datasheets
4. Latest pricing and exclusive promotions
5. Plus, advanced technical & legislation advice

A Premier Farnell Company

Farnell

Use our FREE ProductFind service

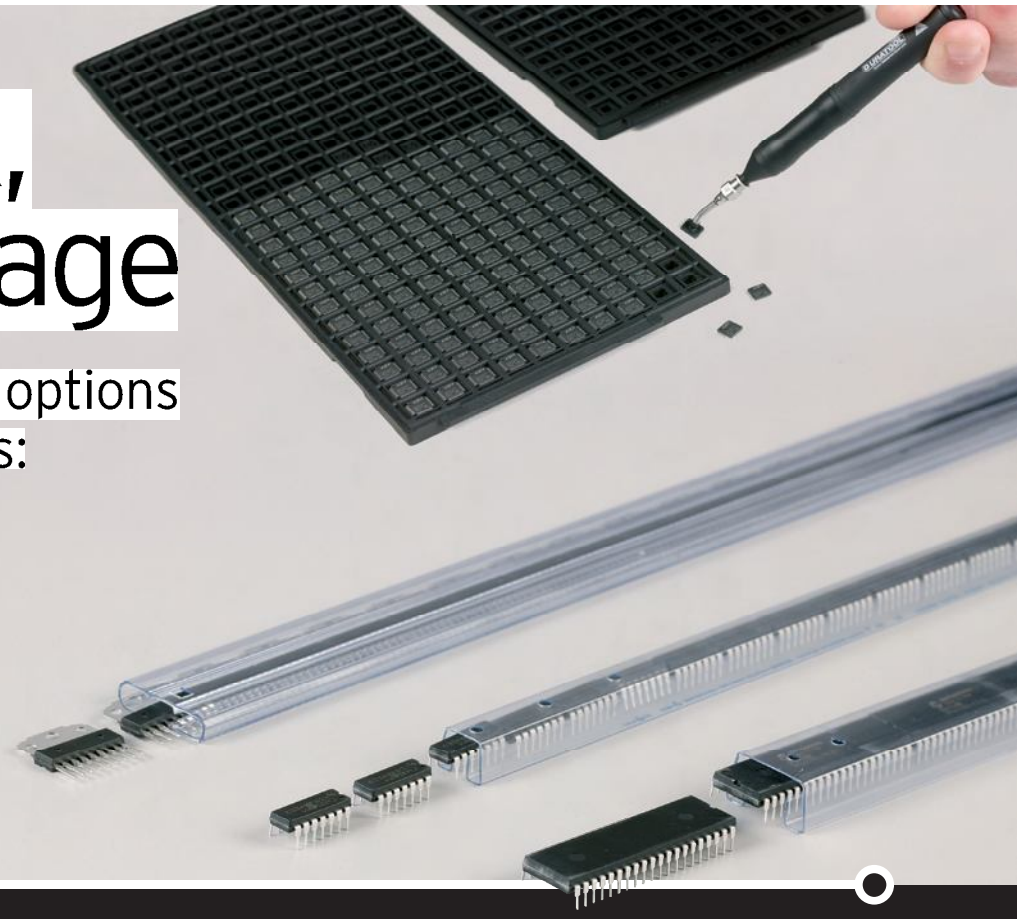
Let our dedicated team of procurement professionals search for you and we'll get back to you within 48 hours!

- Access to millions of products from over 3,500 leading suppliers globally
- Use our immense buying power to source competitively priced products
- Quotes returned in 48 hours
- Fast and accurate lead times

Let us know:

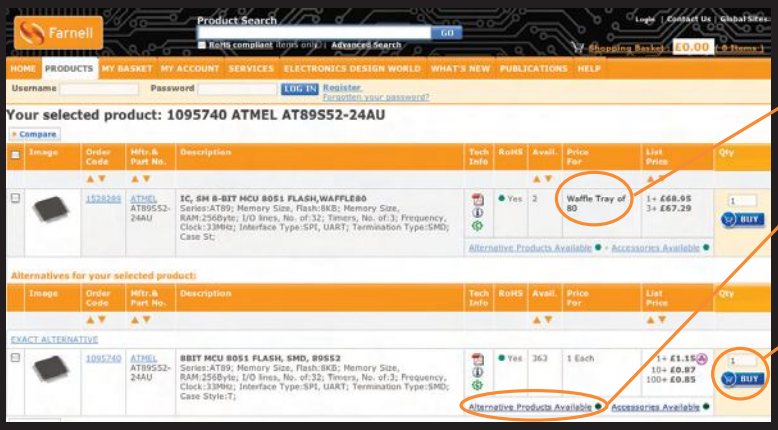
- Product information
- Manufacturer and part number
- Required quantity
- Required delivery date

Free up your design time
Contact Farnell ProductFind
www.farnell.com



A Premier Farnell Company

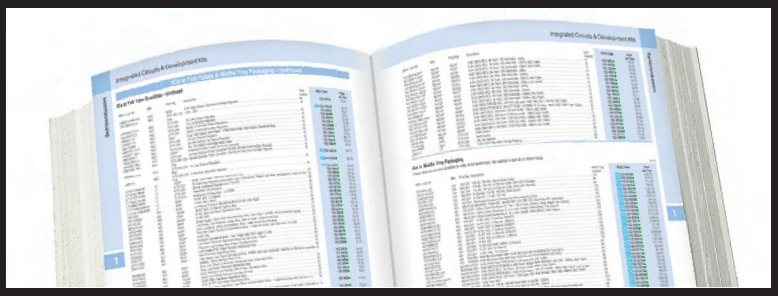
Farnell



You pick, we package

Flexible packaging options for semiconductors:

- **Manufacturer waffle trays**
  The only European distributor to offer **half waffle quantities** with a **FREE pick-up tool**
- **Full quantity tubes**
  A convenient storage solution offering significantly reduced component handling



How to order

Online at www.farnell.com

1. Search by manufacturer part number and look for 'Waffle Tray' or 'Tube' in the 'Price for' field
2. Or, select 'Alternative Products' for additional packaging options available when you search by Farnell order code
3. Enter the number of Waffle Trays or Tubes you require in the quantity field, not the number of components you require

From our catalogue

1. ICs available in tubes and half waffle trays can be found on page 570
2. Request the quantity of waffle trays or tubes you require when you call, fax, email or post your order

Alternatively, purchase in single quantities for despatch in our unique peel packaging, offering complete protection for ICs - only from Farnell.

Fast, efficient ordering from just one source: **www.farnell.com**

Farnell

A Premier Farnell Company

Thousands more products from our extended range

Take advantage of Farnell's global network and access an additional 200,000 products

Products direct from our US warehouse

- Over 110,000 products with associated technical datasheets
- No minimum order sizes
- Delivered in just 3 working days

Over 30,000 MIL SPEC connectors

Amphenol ITT

- Easily source thousands of high-quality connectors from ITT Cannon and Amphenol
- Uniquely assembled and delivered in just 5 working days
- Full attribute data and technical datasheets

If you design in these brands, we've got it covered!

- Additional products from high performance analog, logic, microcontroller and DSP components to capacitors, resistors, filters and inductors - browse the ranges online
- All available on an accurate manufacturer lead-time

molex · Hammond Manufacturing · muRata · Texas Instruments · freescale semiconductor · Analog Devices · AVX

We've got products covered; visit **www.farnell.com** for fast, efficient ordering from just one source.
